**COMMENTS:** This facility rents out part of Coreslab Structures property to conduct crushing of RAP or concrete. Both facilities maintain records for fuel oil usage, tons material processed, and fuel oil sulfur content. The highest observed opacity was 5% for the diesel generator stack and for a drop point from a conveyer belt to one of the dirt piles. Nine visible emission tests were conducted on this day. Sara Greivell from Grove Scientific & Engineering Company was present for the annual compliance test.
