|---|---------------------------------|--------------|
| 1. Date of last inspection: <u>12/2/2013</u>  |                                 |              |
| 2. Past Visible Emissions (VE) tests:   |                                 |              |
| a. Was a VE test performed within each of the past 4 calendar years?  | Xes Yes                         | □ No         |
| b. Has a VE test been performed yet within the current calendar year?   | Yes                             | 🛛 No         |
| c. If first year of operation, was a VE test performed within 30 days of commencing   | _                               |              |
| operation? 🛛 N/A  | Yes                             | No No        |
| d. Date of last VE test: <u>12/2/2013</u>   | _                               | _            |
| e. Was the VE test report filed with the compliance authority no later than 45 days after the test?   | 🛛 Yes                           | No No        |
| f. Did the report state the actual silo loading rate during emissions testing?  | Yes                             | ∐ No         |
| g. What was the actual silo loading rate? tons/hour   |                                 |              |
| h. If weigh hopper(batcher) emissions controlled by the silo dust collector, did the report state $\nabla A$  |                                 |              |
| whether or not batching occurred during emissions testing? X/N/A<br>i. Did the test report state the actual batching rate during emissions testing?   | ∐ Yes<br>□ Yes                  | ∐ No<br>⊠ No |
| j. What was the actual batching rate? tons/hour   |                                 | 🛛 No         |
| k. Did the emissions unit demonstrate compliance with the 5% opacity limit during the last VE test?   | Xes                             | D No         |
| If not, what was the problem (if known)?  |                                 |              |
|   |                                 |              |
|   |                                 |              |
| PART II: STACK EMISSIONS from a silo, weigh hopper(batcher) or other  |                                 |              |
| enclosed storage and conveying equipment  |                                 |              |
|   |                                 |              |
|   |                                 |              |
| 1. Was a visible emissions test conducted by the facility for this unit during this site visit?   | 🛛 Yes                           | ∐ No         |
| a. Was the visible emissions test conducted according to EPA Method 9?  | Xes Yes                         | 🗌 No         |
| b. The visible emission test resulted in an opacity of $\underline{0}$ % for the highest six-minute average.  |                                 |              |
| c. Did the visible emissions test demonstrate compliance with the 5% opacity limit?   | 🛛 Yes                           | 🗌 No         |
| If not, what was the problem (if known)?  |                                 |              |
|   | . 1 . 4 . 1 . 4 .               |              |
| d. During visible emissions tests of the silo dust collector exhaust points was the loading of the silo co-<br>that is representative of the normal sile loading rate? $\nabla N(A = 0) = \frac{1}{2} \sum_{i=1}^{n} N(A = 0) = \frac{1}{2} \sum_{i=1}^{n} \frac{1}{2} \sum_{i=1}^$ |                                 |              |
| that is representative of the normal silo loading rate? 🗌 Yes 🗌 No 🖾 N/A – silo not load<br>e. If silo loaded, was the minimum loading rate of 25 tons/hour achievable in practice?   |                                 |              |
| f. What was the silo loading rate? tons/hour  |                                 | ∐ No         |
| g. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector?   | T Yes                           | 🖂 No         |
| If YES, then continue on to questions $g(1) - g(3)$ below. If answer NO, then skip $g(1) - g(3)$ and go to  |                                 |              |
| 1) Was the weigh hopper (batcher) in operation during the visible emissions test?   | Yes                             | No No        |
| 2) During the visible emissions test, was the batching rate representative of the normal batching rat   | te and                          |              |
| duration?   | Yes                             | No No        |
| 3) What was the batching rate? tons/hour. What was the batching duration? minu  |                                 |              |
| h. 1) If emissions from the weigh hopper (batcher) operation are controlled by a dust collector which   |                                 |              |
| from the silo dust collector, was the visible emissions test of the weigh hopper (batcher) dust colle   |                                 |              |
| conducted while batching at a rate that is representative of the normal batching rate and duration?   | 🖂 Yes                           | 🗌 No         |
| <ol> <li>2) What was the batching rate? tons/hour. What was the batching duration? <u>9</u> minutes.</li> <li>2. Was a visible emissions test conducted by the inspector for this unit during this site visit?</li> </ol>   | Xes                             | No           |
| a. Was the visible emissions test conducted by the inspector for this unit during this site visit?  | $\boxtimes$ Tes $\boxtimes$ Yes |              |
| b. The visible emission test resulted in an opacity of $\underline{0}$ % for the highest six-minute average.  |                                 |              |
| c. Did the visible emission test demonstrate compliance with the 5% opacity limit?  | Xes Yes                         | 🗌 No         |
| d. What was the process rate? tons/hour.  |                                 |              |
| ·   |                                 |              |

Inspector's Signature

Approximate Date of Next Inspection

**COMMENTS:** The OCEPD inspector, Norma Ali, met with Steve Ellis, plant operator and Zachary Beatty, consultant from Beatty Environmental Services, LLC to audit the annual visual emissions compliance test on all seven emission units. Zero percent opacity was observed on all EUs and loading rates were acceptable. Due to slow business, this is an idle facility, only operated when necessary, a few times a year.

No objectionable odors were noticed or PM leaving the property was observed during the compliance test.
