Stack Emissions 1. Were visible emiss	sions tests conducted during	this site visit according to EP	A Method 9 (Ref.: Chapter			
62-297, F.A.C.)?			·[⊠Yes □ No		
2. Are emissions from silos, weigh hoppers (batchers), and other enclosed storage and conveying equipment controlled to the extent necessary to limit visible emissions to 5 percent opacity?						
3. During visible emissions tests of the silo dust collector exhaust points was the loading of the silo conducted						
at a rate that is representative of the normal silo loading rate, or at least at the minimum 25 tons per hour rate, unless such rate is unachievable in practice?

Compliance Demonstration - (Rule 62-296.401(5)(i), F.A.C.)	
1. Is each dust collector exhaust point tested according to the visible emissions limiting standard as part of the	
annual compliance demonstration? (Rule 62-297.310(7)(a), F.A.C.)	$\exists N_0$
New Facilities – (permitted pursuant to Rule 62-210.300(4), F.A.C., Air General Permits) 2. Did this facility demonstrate:	
	¬ N.
a) initial compliance no later than 30 days after beginning operation?	_] No
b) annual compliance within 60 days prior to each anniversary of the air general permit notification form	٦
submittal date?	_l No
Existing Facilities – (permitted pursuant to Rule 62-210.300(4), F.A.C., Air General Permits)	
3. In order to demonstrate annual compliance, was an annual visible emissions test conducted 60days prior to	
the AGP Notification form submission, and within 60 days prior to each anniversary date? \Big Yes	No
Test Reports – (Rules 62-213.440, F.A.C. and 62-297.310(8)(b), F.A.C.)	
4. Was the required test report filed with the department as soon as practical, but no later than 45 days after the	
test was completed? \BYes	\exists_{N_0}
test was completed: MATOS L

COMMENTS: The VE test on the cental dust collector was conducted during the filling of silo #2 with white cement. The contractor and DEP inspector stood on the catwalk outide the mixer deck office and observed the exhaust of the dust collector at approximatly eye level. The sun location was not ideal, but the buildings blocked the sun from view. Silos 1-4 are all connected to the central dust collector with no individual dust collector of their own. There were no visible emmission observed. Silo #5 which holds silicon, has a dust collector on the silo. This was observed from ground level. There were no emissions observed from this unit as well. The cement, sand, pigment and water are carried to one of 3 mixers. The damp product is then carried on closed in conveyor belts under the roof to be formed. There is no need of VE tests on this process, because it is closed until too damp to emit dust. The grounds are kept clean from cement dust by regular cleaning. Records were looked at in the office. The deisel is only used to run the fork lift and loader. All other operations are electonic. No violations were observed.
