**COMMENTS:** The compliance calendar was filled out completely including an accurate rolling annual average and inspection records. Purchase receipts were stapled to the calendar.

The following were noted to be out of compliance during the inspection.

III.2) Separator water discharged via hose into a container (~2 gallon) and was observed to be overflowing into the secondary containment for the dc machine during the inspection. This was corrected during the inspection.

VI.2) The facility now uses as TIF8800A leak detector device. The operation manual was not available during the inspection and it did not appear to be calibrated or used correctly. The operation manual is available in several languages on the manufacturers website at the following link { <http://www2.otctools.com/otctools.com/newcatalog/products/TIF8800A.pdf> } The operator should download the manual, review the calibration and usage instructions and request assistance from the manufacturer or supplier if necessary.

Recommendations

VI.4) For accurate leak determinations, the sensing tip of the instrument should slowly be passed over the components at least one centimeter away (not touching) the machine components.

A hazardous waste compliance evaluation was also conducted at this facility and will be sent as a separate report.
