(Refer to the chart & information below to identify the Printing Process combination(s) and to determine the most stringent limit for the combination(s) chosen.)

PRINTING PROCESS		INDIVIDUAL PROCESS LIMITS (IPL)	STRINGENT LIMITS FOR COMBINATIONS (SLC) (SLC = IPL* ÷ 8.5 lbs/gal.**)	
#1	Heatset Offset Lithographic	100,000 lbs.*	11,765 gals.**	
#2	Non-heatset Offset Lithographic	14,250 gals.	14,250 gals	
#3	Digital	12,100 gals.	12,100 gals.	
#4	Screen or Letterpress	14,250 gals.	14,250 gals	
#5	Water-based or UV cured Rotogravure or Flexographic	400,000 lbs.*	47,059 gals.**	
#6	Solvent-based Rotogravure or Flexographic	100,000 lbs*	11,765 gals**	

(<u>Example</u>: If you were a printer and your combination printing processes included both <u>Printing Process</u> numbers two (2) and five (5), then the most stringent limit shall apply to the total of all solvent-containing material used. In this example, the individual <u>Stringent Limit for Combinations</u> (<u>SLC</u>) for each process is 14.250 gals. and 47.059 gals. respectively. Therefore, the most stringent limit for this combination would

COMMENTS: An annual inspection was conducted for this facility on 1/18/2008. The owner, Daniel Feather, was hard to meet at this facility since he only runs the equipment once or twice a week. This facility uses approximately 15 gallons of Rycoline Rogersol Fast Wash II per year, which has a VOC content of 6.2 lbs per gallon. The facility used 12.4 pounds of inks for 2007, which have a VOC content of 20%. The total VOCs for 2007 was 95.48 pounds. The facility used a combined total of 27.4 gallons of cleaning solvents and fountain solution additives. Facilities that use less than 2,850 gallons, combined, of cleaning solvents and fountain solution additives in any consecutive twelve months are exempt from permitting per Rule 62-210 (3)(a)37(b)(II).
