COMMENTS: Mr. John Hirsbrunner, General Manager, escorted me around the facility, and provided me with all requested records at the time of this inspection. This facility has one 120 ton cement silo, and one 75 ton fly ash silo. The emissions are controlled from both silos by a central baghouse. The 2010/2011 Federal Fiscal Year (FFY) Method 9 visible emission test was performed at the time of this inspection. The test result was 0% opacity, and the loading rate was 34.87 tons per hour. The front half

of the facility is paved, and the back has a gravel surface. As described by the manager the facility will treat the gravel with wetting, and application of "Dust Down". No fugitive emissions were observed at the time of this inspection. This facility does have a natural gas fired boiler used to assist in concrete curing during colder weather. In 2010 this boiler used 0.782725 MMSCF of gas. the facility's limit of gas use is 44 MMSCF since no other fuels are used at this facility. A review of the facility's records revealed that in 2010 the facility produced 19,532 tons of concrete products, and from 1/1/2011 to 7/15/2011 the facility has produced 15,540 tons of concrete products. Please note that if the facility's contact information or authorized representative changes, the facility must provide written notification to the Department within 30 days of the change.
