	hager. As Mr. Hogan and I toured the facility, he explained the facility is from the unpaved site. A large water tanker is available to be used to the speed of the truck at the site to 5 mph.
At the time of the inspection, a cement tanker was unloading c not witness any visible emissions from the delivery.	cement to the facility's cement silo. I observed the unloading and did
Records of material produced are being logged daily. The bat oil apply.	atching facility is operated using electricity, so no requirements for fuel
The last required visible emission test was performed on Dece December 21, 2008. A 15-day prior notification of emissions nwdair@dep.state.fl.us.
