COMMENTS: Efren Vazquez met Byron Nelson, consultant for Southern Environmental Sciences, Inc., on 4/01/2009. A VE was conducted on the cement loading process. The observed opacity was zero percent. The loading rate was 16.36 tph. The loading rate of 25 tph could not be achieved because the silo was full and could only hold a partial load. This loading rate will be accepted for this test due to lack of business. The facility will not run for another 4 months, according to site personnel. A VE was also conducted on the truck load-outs. The material is a wet slurry. The observed opacity for this process was zero percent. These comments were produced by Ilka Bundy since Efren Vazquez no longer works in the Air Quality Management section. The test report was reviwed and entered by Ilka Bundy, Environmental Team Leader for OCEPD.
