COMMENTS: According to facility file review, this facility has 2 emission units, but only one has been tested. The last testing was conducted June 21, 2011. Inspection Findings: Ms. Melinda Hill answered checklist questions. This relocatable silo has two dust collectors: one silo-top unit and a small filter dust collector which controls the truck loading. The truck loading emission unit is Emission Unit No. 002 (EU002). Since EU002 only controls the loading of trucks, it is not required to have annual Visible Emissions testing. I confirmed this information with a phone call to Ms. Danielle D. Henry from the field. At 3:27pm. I returned to the facility to let Ms. Hill know that no testing is required on EU002 and assured her I would correct our computer database to reflect the "no testing" requirement. On November 30th, I made changes to EU002 in the ARM's database to reflect the proper testing frequency. Photos were taken of EU002 and are attached to this inspection report.
