| <b>COMMENTS:</b> This was the initial inspection for the new concrete b   |  |           |  |  |  |  |

**COMMENTS:** This was the initial inspection for the new concrete batching plant. EU#002 initial VE test was only conducted for 23 minutes and was not accepted by the Department. A retest was conducted for 30 minutes at a minimum rate of 25 tph with no visible emissions. The facility grounds were clean and there were two wash stations for exiting trucks from the loadout area. The facility yard is paved and a street sweeper is brought on site to clear out excess material that could contribute to fugitive emissions. Sprinklers are installed and used to wet the aggregate piles prior to being loaded into the hopper by a front end loader. The facility had the most current months fuel usage on site and a few ticket processing orders. All records are shipped to the main office for storage.

The facility does not collocate with any other mineral process plants or portable silos. This is a stationary plant that runs off of electricity and only uses gas for cement trucks and the front end loader. All of the silos and hoppers are brand new and allof the duct work is in tact. No visible emissions were observed while on site.
