| facility. For purposes of determining which limit is the most stringent, the pounds of materia | |
| lithographic lines and flexographic lines shall be converted to the equivalent gallons by divi- gallon and shall be compared with the limits for non-heatset offset lithographic, digital, scre- | |
| applicable, for the type of printing lines at the facility. The most stringent limit shall apply to | |
| containing material used?; | |

3 of 4 Revised 09/14/07

(Refer to the chart & information below to identify the Printing Process combination(s) and to determine the most stringent limit for the combination(s) chosen.)

| PRINTING PROCESS | | INDIVIDUAL PROCESS LIMITS (IPL) | STRINGENT LIMITS FOR COMBINATIONS (SLC) (SLC = IPL* ÷ 8.5 lbs/gal.**) | |
|------------------|--|------------------------------------|--|--|
| #1 | Heatset Offset Lithographic | 100,000 lbs.* | 11,765 gals.** | |
| #2 | Non-heatset Offset Lithographic | 14,250 gals. | 14,250 gals | |
| #3 | Digital | 12,100 gals. | 12,100 gals. | |
| #4 | Screen or Letterpress | 14,250 gals. | 14,250 gals | |
| #5 | Water-based or UV cured Rotogravure or Flexographic | 400,000 lbs.* | 47,059 gals.** | |
| #6 | Solvent-based Rotogravure or Flexographic | 100,000 lbs* | 11,765 gals** | |

(<u>Example</u>: If you were a printer and your combination printing processes included both <u>Printing Process</u> numbers **two** (2) and **five** (5), then the most stringent limit shall apply to the total of all solvent-containing material used. In this example, the individual <u>Stringent Limit for Combinations</u> (<u>SLC</u>) for each process is 14,250 gals. and 47,059 gals., respectively. Therefore, the most stringent limit for this combination would be 14, 250 gals.)
