Description of Facility

Below, or as an attachment to this form, provide a description of the concrete batching plant operations at the facility in sufficient detail to demonstrate the facility's eligibility for use of this air general permit and to provide a basis for tracking any future equipment or process changes at the facility. Describe type of concrete product(s) manufactured, all air pollutant-emitting processes, and identify any air pollution control measures used. Mobile source equipment information is not needed (eg.: trucks, bulldozers, front-end loaders, etc.)

This facility utilizes three 100-ton silos (2 cement and 1 fly ash).

Truck batching is controlled by a load shroud.

A C&W reverse air Model AR-170 central dust collector is located at ground level and collects dust from each of the silos and the truck batching process. The dust collector has a 15 HP blower with 8000 cfm capacity and 72 bags in two compartments.

Facility currently operates under permit 0330070-006-AG.
