**Emission Unit Details**

MANUFACTURER	MODEL NUMBER	SERIAL NUMBER	RATED CAPACITY
B&L Cremation Systems, Inc.	N-20AA	59437701	150 lb/hr

**Design Calculations**

If this is an initial registration for a proposed new human crematory unit, provide design calculations to confirm a sufficient volume in the secondary chamber combustion zone to provide for at least a 1.0 second gas residence time at 1800 degrees F.

- Design calculations attached.
- Registration is not for proposed new human crematory unit(s).

**Facility Fuel & Controls**

The crematory is designed to burn human remains at the average incineration rate of 150 pounds per hour (lb/hr). The incinerator consists of primary and secondary (afterburner) chambers, each fired with on natural gas with a maximum total design heat input rate of 1.5 MMBtu/hr.

Emissions are controlled by the afterburner, which maintains a minimum secondary chamber combustion zone temperature of 1600°F prior to and during combustion of material in the primary chamber. The secondary chamber is designed to ensure one-second residence time at a gas temperature of 1800°F, and is equipped with a continuous temperature monitor and recorder, and a stack opacity monitoring system.
