### Fuel Consumption

If this is an initial registration for reciprocating internal combustion engine operations, provide an estimate of the total amount of fuel expected to be consumed over a 12-month period. Note: the general permit limits fuel consumption by all reciprocating internal combustion engines at the facility to 20,000 gallons per year of gasoline, 250,000 gallons per year of diesel fuel, 1.15 million gallons per year of propane, 40 million standard cubic feet per year of natural gas, or an equivalent prorated amount if multiple fuels are used

If this is a re-registration for reciprocating internal combustion engine operations, provide the highest 12-month total fuel consumption amount, in appropriate units, for the last five years. Indicate the 12-month period over which this fuel consumption occurred.

The highest 12-month fuel usage average occurred during 2009, when 2,877 gallons of fuel were used. Each generator is run approximately 1-hour per day, once a week.

### Description of Facility

Below, or as an attachment to this form, provide a description of the reciprocating internal combustion engine operations at the facility in sufficient detail to demonstrate the facility's eligibility for use of this air general permit and to provide a basis for tracking any future equipment or process changes at the facility. Describe all air pollutant-emitting processes and equipment at the facility, and identify any air pollution control measures or equipment used.

There are 3-diesel powered emergency generators at this water plant.

1- Cummings, Model QSK60-66

2- Caterpillar, Model 3516

3- Cummings, Model 5517876- Provides backup power for wastewater pump and is rarely used.
