**Subject:** RE: Environmental Land Services 0350023

Rita,

Thank you for your comments and concerns.

In response to your e-mail the subject item Non-metallic Mineral Processing Plant (crusher facility) has been entitled to operate.

While we recognize that there may be a Compliance need to know what emission units (EU) are associated with this facility, the Air General (AG) permit program does not track EU's. The AG program entitles facilities.

Even if emission units were listed on the form, we have no way of verifying their existence, or for that matter whether or not the information supplied is correct. In this situation, verification or accounting of EU's would be best accomplished with a visit by a Compliance person, and if needed, entered into the database at that point.

We appreciate your thoughts, but until such time that we have a process or method in place it will be difficult to do.

*Dick*

Dick,

We received the notification that Environmental Land Services received their AG for their crusher operation. Thank you. We are creating a file for the facility.

However, I am unable to tell from their AG Registration whether there is more than one emission point (just the crusher?)

Conveyors? Drop points? Screens, etc?) and if so, whether these points are subject to 40 CFR 60 Subpart OOO or the State VE standard of 20%.

ARMS doesn't show an Emission unit for this facility yet.

I wanted to pass this information on to our compliance personnel so that they can be on the lookout for an upcoming VE test notification or not.

Thank you.

Rita
