Subject: Withdrawal of air permit renewal for permit 7775286

Dick,

Please accept this email as verification that Ready Mix USA is requesting to withdraw the air permit renewal for mine 7775286-001AG submitted to the department by me.

Please let me know if you need anything else.

Sincerely,

Erin Williams Christie
(205) 936-3572

Subject: Facility ID #'s 7775286 & 7770016

Good morning Erin,

I hope your day is going well and that you are not knee-deep in snow or ice.

I need some help with your Concrete Batching registration forms in that some of your equipment description information and processes are not quite as detailed or specific as they could be.

I called yesterday and left a message on your phone regarding the first item #7775286 immediately below. The second item, #7775286 is also missing more specific detail.

- 1) AIRS ID# 7775286-002-AG, COUCH READY MIX USA dba VILLA TASSO MINI, 10640 HWY 20 W, NICEVILLE, FL 32578 - Our database reflects that no equipment is present at this location. Your submitted form says there is a Cemco portable CCB Plant w/ two silos, 50 & 52 T cap, no other identifying info provided, such as Model #'s, emission control devices, silo capacities (Mfr, model #'s filter area) etc. Is there a truck loadout, and how are fugitive emissions controlled at the drop point? Can you confirm, and also supply more specific identification information as called for on the forms. This is correct; this plant is not at this location; one of the silos is now permitted under our Crestview facility Permit #0910048, the other silo is not in use (and not at this location), but we may use it at this facility in the future. I should have asked how we should proceed with this permit since it is a unique situation. Please let me know how you would like to proceed and I can get you more information as we go.
- 2) AIRS ID# 7770016-007-AG, COUCH READY MIX USA dba VILLA TASSO PLANT, 10642 HWY 20 W, NICEVILLE, FL 32578 - Submitted form (Page ten (10)) does not tell me how many silos are located on site. What are the MERTZ baghouse model numbers? Is there a truck loadout, and how are fugitive emissions controlled at the loadout drop point or is the concrete wet loaded into the trucks? For future reference, try to keep all Fugitive emissions Reasonable Precautions information on Page nine (9) and all Confined emissions unit equipment & Emissions Control equipment information on Page ten (10). There are two silos (one cement and one fly ash) Each of the silo's are fifty-eight (58) ton capacity silos. Each silo has three 20" (305 sq .ft) cartridge-jet dust collectors Max capacity (ACFM) 150; polyester 5 micron weave, coated; automatic pulse timers on all shakers, double action vents and a 25 cubic foot dust collector on the cement weight hopper (Manufacturer and Model: WAM FJIJ03).

If you have any questions, comments or concerns please e-mail or call.

Thank you for your assistance with clarifying these issues.

Sincerely yours,

Dickson E. Dibble
