HUMAN CREMATORIAL  
AIR GENERAL PERMIT REGISTRATION FORM

Bureau of Air Monitoring  
& Mobile Sources

Part II. Notification to Permitting Office

(Detach and submit to appropriate permitting office; keep copy onsite)

**Instructions:** To give notice to the Department of an eligible facility's intent to use this air general permit, the owner or operator of the facility must detach and complete this part of the Air General Permit Registration Form and submit it to the appropriate Department of Environmental Protection or local air pollution control program office which has permitting authority. Please type or print clearly all information, and enclose the appropriate air general permit registration processing fee pursuant to Rule 62-4.050, F.A.C. (*\$100 as of the effective date of this form*)

Registration Type

Check one:

**INITIAL REGISTRATION** - Notification of intent to:

- Construct and operate a proposed new facility.  
 Operate an existing facility not currently using an air general permit (e.g., a facility proposing to go from an air operation permit to an air general permit).

**RE-REGISTRATION** (for facilities currently using an air general permit) - Notification of intent to:

- Continue operating the facility after expiration of the current term of air general permit use.  
 Continue operating the facility after a change of ownership.  
 Make an equipment change requiring re-registration pursuant to Rule 62-210.310(2)(e), F.A.C., or any other change not considered an administrative correction under Rule 62-210.310(2)(d), F.A.C.

**Surrender of Existing Air Operation Permit(s) - For Initial Registrations Only**

If the facility currently holds one or more air operation permits, such permit(s) must be surrendered by the owner or operator upon the effective date of this air general permit. In such case, check the first box, and indicate the operation permits being surrendered. If no air operation permits are held by the facility, check the second box.

- All existing air operation permits for this facility are hereby surrendered upon the effective date of this air general permit; specifically permit number(s):  
 No air operation permits currently exist for this facility.

**General Facility Information**

Facility Owner/Company Name (Name of corporation, agency, or individual owner who or which owns, leases, operates, controls, or supervises the facility.)

Beach Funeral Home and Cremation Services

Site Name (Name, if any, of the facility site; e.g., Plant A, Metropolis Plant, etc. If more than one facility is owned, a registration form must be completed for each.)

Beach Funeral Home, Inc.

Facility Location (Provide the physical location of the facility, not necessarily the mailing address.)

Street Address: 4999 N. Wickham Road

City: Melbourne

County: Brevard

Zip Code: 32940

**Facility Start-Up Date (Estimated start-up date of proposed new facility.) (N/A for existing facility)**  
December 2009

**Owner/Authorized Representative**

Name and Position Title (Person who, by signing this form below, certifies that the facility is eligible to use this air general permit.)

Print Name and Title: Manuel Vieira, Owner

**Owner/Authorized Representative Mailing Address**

Organization/Firm: Beach Funeral Home and Cremation Services

Street Address: 4999 N. Wickham Road

City: Melbourne

County: Brevard

Zip Code: 32940

**Owner/Authorized Representative Telephone Numbers**

Telephone: 321-282-4640

Fax:

Cell phone (optional):

**Facility Contact (If different from Owner/Authorized Representative)**

Name and Position Title (Plant manager or person to be contacted regarding day-to-day operations at the facility.)

Print Name and Title:

**Facility Contact Mailing Address**

Organization/Firm:

Street Address:

City:

County:

Zip Code:

**Facility Contact Telephone Numbers**

Fax:

Cell phone (optional):

**Owner/Authorized Representative Statement**

This statement must be signed and dated by the person named above as owner or authorized representative

*I, the undersigned, am the owner or authorized representative of the owner or operator of the facility addressed in this Air General Permit Registration Form. I hereby certify, based on information and belief formed after reasonable inquiry, that the facility addressed in this registration form is eligible for use of this air general permit and that the statements made in this registration form are true, accurate and complete. Further, I agree to operate and maintain the facility described in this registration form so as to comply with all applicable standards for control of air pollutant emissions found in the statutes of the State of Florida and rules of the Department of Environmental Protection and revisions thereof.*

*I will promptly notify the Department of any changes to the information contained in this registration form.*

PAGE 10

#### Design Calculations

If this is an initial registration for a proposed new human crematory unit, provide design calculations to confirm a sufficient volume in the secondary chamber combustion zone to provide for at least a 1.0 second gas residence time at 1800 degrees F.

- Manufacturer's' design calculations attached. - See Attachment 1 for compliance test report
- Registration is not for proposed new human crematory unit(s).

#### Description of Facility

Below, or as an attachment to this form, provide a description of all crematory operations at the facility in sufficient detail to demonstrate the facility's eligibility for use of this air general permit and to provide a basis for tracking any future equipment or process changes at the facility. Describe all air pollutant-emitting processes and equipment at the facility, and identify any air pollution control measures or equipment used.

#### Equipment Description

The "Classic" is a multi-chamber unit having an average 150 - 200 lbs/hr fired with natural gas. The primary chamber burner is rated at 500,000 Btu/hr, and the secondary chamber burner is rated at 1,500,000 Btu/hr, for a total of 2,000,000 Btu/hr. Control of air pollution is achieved through the design of the "Classic" crematory, including its ability to operate the secondary chamber between 1600 - 1850 degrees Fahrenheit at a residence time in excess of 1.0 second. The design also includes fully automatic PLC based controls, independent fuel/air systems, preheated combustion air, secondary chamber temperature monitor and recorder, primary burner temperature interlock (prevents primary burner from firing prior to the secondary chamber reaching it's set point temperature), UV continuous scanning flame detectors on burners, and an opacity sensor which can temporarily suspends operation of the primary chamber burner. In attachment 2 we have include a copy of the crematory spec.

#### Emissions Summary

Emission Summary and Calculations – Air pollution control is demonstrated through identical source stack testing. (see Attachment 1). See Attachment 3 for tabular summary of emissions. Criteria pollutant emissions values, except CO and PM are based on emission factors from AP-42, Table 2.1-12. The emission for CO and PM are derived from results of the identical source stack test.

#### Retention Time

The retention time was measured on an identical unit at 1.19 seconds at 1825F.

\* APPENDIX TO PAGE 10 OF  
ORIGINAL FORM REC'D F&A Oct 19, 2009

**Design Calculations**

If this is an initial registration for a proposed new human crematory unit, provide design calculations to confirm a sufficient volume in the secondary chamber combustion zone to provide for at least a 1.0 second gas residence time at 1800 degrees F.

- Manufacturer's design calculations attached. - See Attachment 1 for compliance test report  
 Registration is not for proposed new human crematory unit(s).

**Description of Facility**

Below, or as an attachment to this form, provide a description of all crematory operations at the facility in sufficient detail to demonstrate the facility's eligibility for use of this air general permit and to provide a basis for tracking any future equipment or process changes at the facility. Describe all air pollutant-emitting processes and equipment at the facility, and identify any air pollution control measures or equipment used.

**Scope of the Application**

The scope of this application is to re-register facility number 0090223-001-AG. The IE43 equipment referenced on this permit was never constructed. The facility intent is to construct the equipment below. This is an amendment to the previous submittal.

**Equipment Description**

The "Classic" is a multi-chamber unit having an average 150 - 200 lbs/hr fired with natural gas. The primary chamber burner is rated at 500,000 Btu/hr, and the secondary chamber burner is rated at 1,500,000 Btu/hr, for a total of 2,000,000 Btu/hr. Control of air pollution is achieved through the design of the "Classic" crematory, including its ability to operate the secondary chamber between 1600 - 1850 degrees Fahrenheit at a residence time in excess of 1.0 second. The design also includes fully automatic PLC based controls, independent fuel/air systems, preheated combustion air, secondary chamber temperature monitor and recorder, primary burner temperature interlock (prevents primary burner from firing prior to the secondary chamber reaching its set point temperature), UV continuous scanning flame detectors on burners, and an opacity sensor which can temporarily suspends operation of the primary chamber burner. In attachment 2 we have include a copy of the crematory spec.

**Emissions Summary**

Emission Summary and Calculations – Air pollution control is demonstrated through identical source stack testing. (see Attachment 1). See Attachment 3 for tabular summary of emissions. Criteria pollutant emissions values, except CO and PM are based on emission factors from AP-42, Table 2.1-12. The emission for CO and PM are derived from results of the identical source stack test.

**Retention Time**

The retention time was measured on an identical unit at 1.19 seconds at 1825F.

## HUMAN CREMATORIAL AIR GENERAL PERMIT REGISTRATION FORM

Bureau of Air Pollution  
& Mobile Sources

### Part II. Notification to Permitting Office

(Detach and submit to appropriate permitting office; keep copy onsite)

**Instructions:** To give notice to the Department of an eligible facility's intent to use this air general permit, the owner or operator of the facility must detach and complete this part of the Air General Permit Registration Form and submit it to the appropriate Department of Environmental Protection or local air pollution control program office which has permitting authority. Please type or print clearly all information, and enclose the appropriate air general permit registration processing fee pursuant to Rule 62-4.050, F.A.C. (*\$100 as of the effective date of this form*)

#### Registration Type

**0090223-002**

Check one:

**INITIAL REGISTRATION** - Notification of intent to:

- Construct and operate a proposed new facility.
- Operate an existing facility not currently using an air general permit (e.g., a facility proposing to go from an air operation permit to an air general permit).

**RE-REGISTRATION** (for facilities currently using an air general permit) - Notification of intent to:

- Continue operating the facility after expiration of the current term of air general permit use.
- Continue operating the facility after a change of ownership.
- Make an equipment change requiring re-registration pursuant to Rule 62-210.310(2)(e), F.A.C., or any other change not considered an administrative correction under Rule 62-210.310(2)(d), F.A.C.

#### Surrender of Existing Air Operation Permit(s) - For Initial Registrations Only

If the facility currently holds one or more air operation permits, such permit(s) must be surrendered by the owner or operator upon the effective date of this air general permit. In such case, check the first box, and indicate the operation permits being surrendered. If no air operation permits are held by the facility, check the second box.

- All existing air operation permits for this facility are hereby surrendered upon the effective date of this air general permit; specifically permit number(s):
- No air operation permits currently exist for this facility. Note: Facility current General Permit number is: 0090223-001-AG

#### General Facility Information

Facility Owner/Company Name (Name of corporation, agency, or individual owner who or which owns, leases, operates, controls, or supervises the facility.)

**REPORT CERTIFICATION**

To the best of my knowledge, all applicable field and analytical procedures comply with the Florida Department of Environmental Protection requirements and all test data and plant operating data are true and correct.

Dagmar Fick  
Dagmar Fick, Staff Engineer

Date

4/12/07

## **1.0 INTRODUCTION**

On March 29, 2007, Air Consulting and Engineering, Inc. (ACE) conducted Particulate Matter (PM) and Carbon Monoxide (CO) emissions testing on the outlet stack of the crematory at Peavy Funeral Home in Blountstown, Florida. Mr. Luis Lloréns of A1 Environmental Consulting Services performed the visible emissions test.

United States Environmental Protection Agency (EPA) reference method 5 (PM), EPA Method 10 (CO) and EPA Method 9 (VE) were performed to satisfy conditions of Florida Department of Environmental Protection (FDEP) permit 0130010-001-AC.

## **2.0 SUMMARY AND DISCUSSION OF RESULTS**

Emission results and flue gas parameters for the unit are summarized in Table 1. The unit was in compliance with permit conditions.

PM results averaged 0.0448 grains per dry standard cubic foot (gr/dscf) of flue gas corrected to 7% Oxygen ( $O_2$ ) (0.0579 gr/dscf @ 12%  $CO_2$ ), which is within the allowable limit of 0.08 gr/dscf at 7%  $O_2$ . The average residence time result of the Secondary Chamber resulted in 1.29 seconds (see Appendix G for RT calculations).

CO emissions averaged 3.49 ppm at 7%  $O_2$  (4.68 ppm @ 12%  $CO_2$ ), which is also within the permitted standard of 100 ppm at 7%  $O_2$ .

Visible emissions, performed concurrently with Run 2, averaged 0.0 percent opacity for the highest six-minute period of the one-hour test (see Appendix F for VE data and observer's certification). Emissions are within the allowable limit of 5 percent opacity with a permitted opacity of 20% for 3 minutes per hour.

PM emissions summaries, field data sheets and laboratory data are presented in Appendices A, B and C. CO emission summaries and data logger copies are in Appendix D.

**PM = 0.080 gr/dscf @7% O2**

**CO = 100 ppm @7% O2**

### **3.0 PROCESS DESCRIPTION AND OPERATION**

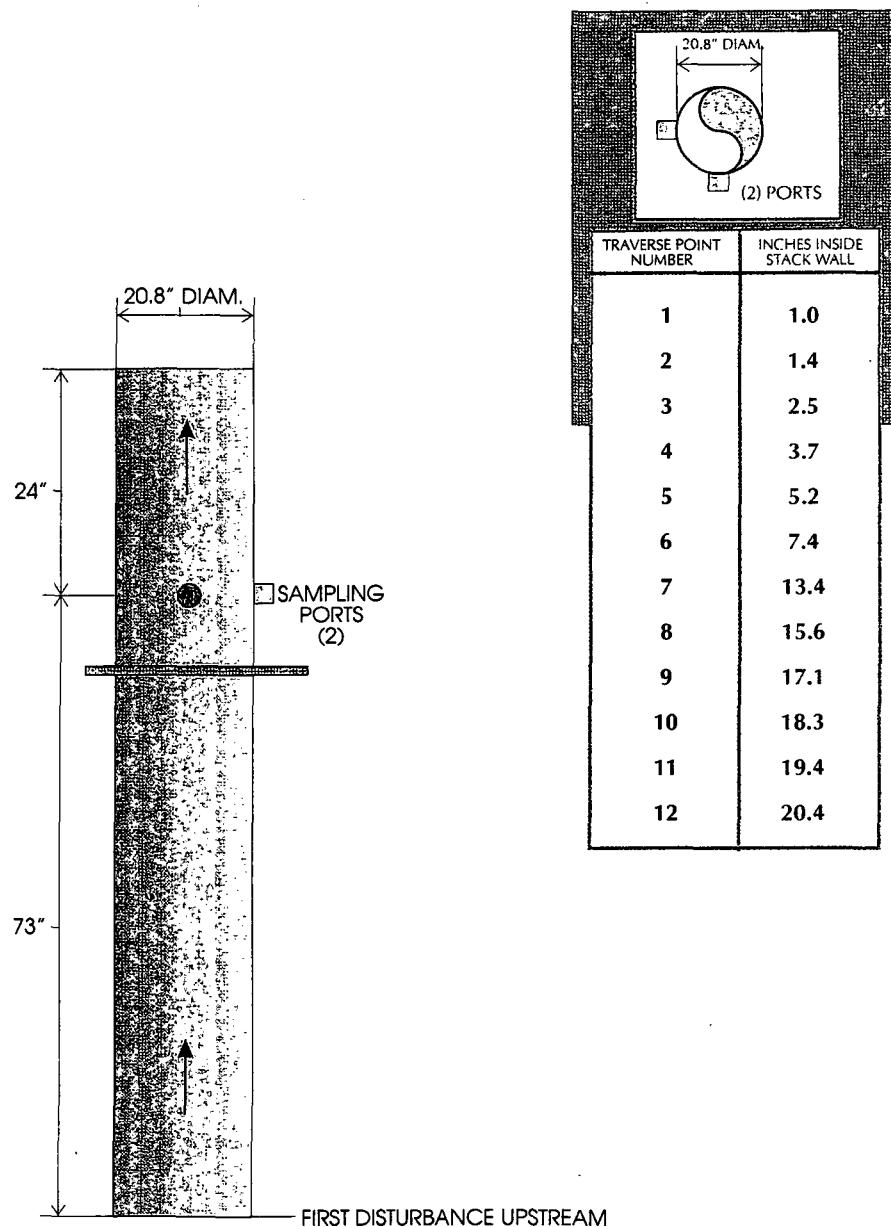

Peavy Funeral Home owns and operates a human crematory, Model "Classic" manufactured by US Cremation Equipment. Both the primary and secondary combustion chambers are fired with natural gas and have a total design heat input of 2.0 MMBTUH. Emissions are controlled by the afterburner. The Secondary Combustion Chamber (SCC) of each crematory volume is 71 cubic feet.

During the compliance test, the incinerator was charged with human remains, weighing 175, 160 and 150 lbs. The Secondary Chamber Residence Time was calculated to be 1.33, 1.34 and 1.19 seconds at 1700 to 1825° F.

Residence time calculations, crematory temperature chart and load are presented in Appendix G.

#### **4.0 SAMPLING POINT LOCATION**

The outlet stack schematic and sampling point location are provided in Figure 1. The three crematories are identical.

NOTE: NOT TO SCALE.

SOURCE: AIR CONSULTING & ENGINEERING, INC. (420A1 4/13/07)

PEAVY FUNERAL HOME  
BLOUNTSTOWN, FLORIDA

## **5.0 FIELD AND ANALYTICAL PROCEDURES**

### **5.1 Particulate Matter Sampling and Analysis--EPA Method 5 (Quartz Probe)**

Particulate matter samples were collected by the particulate matter emission measurement method specified by the United States Environmental Protection Agency. A schematic diagram of the sampling train used is shown in Figure 2. All particulate matter captured from the nozzle to, and including, the filter was included in the calculation of the emission rate of particulate matter.

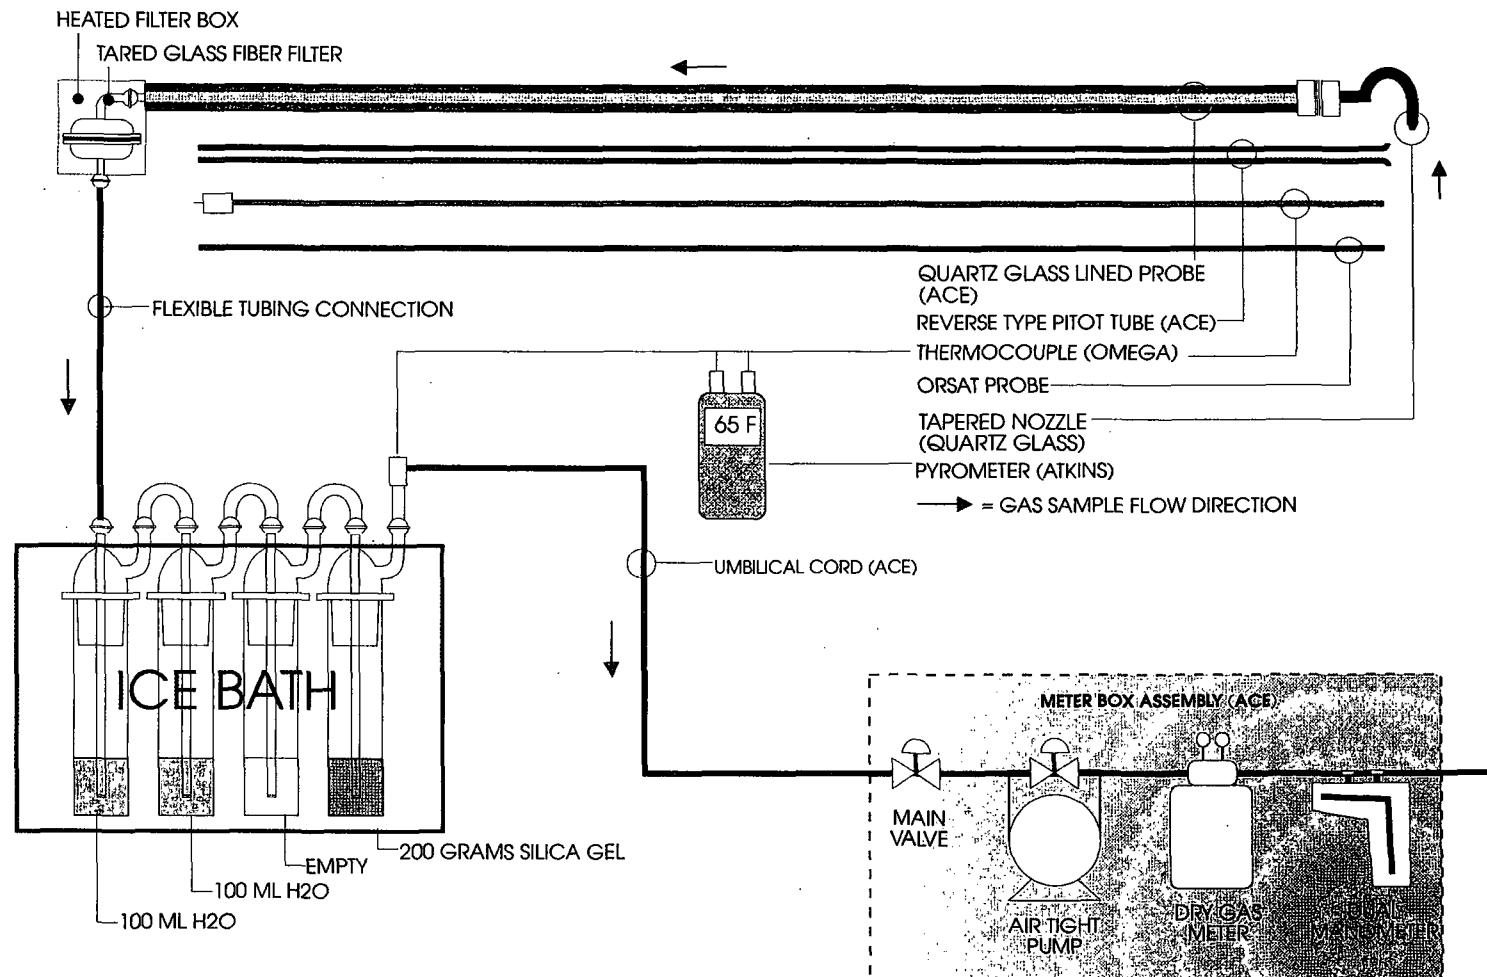

#### **PREPARATION OF EQUIPMENT**

1. FILTERS - Gelman type "A" filters, or their equivalents, were inspected, numbered, and placed in a drying oven for two hours at 105 degrees C, removed and placed in a standard desiccator containing indicating silica gel, allowed to cool for two hours, and weighed to the nearest 0.1 mg. The filters were then re-desiccated for a minimum of six hours and weighed to a constant weight (less than 0.5 mg change from previous weighing). The average of the two constant weights was used as the tare weight.
2. NOZZLE, FILTER HOLDER, AND SAMPLING PROBE - The nozzle, filter holder, and sampling probe were washed vigorously with soapy water and brushes, rinsed with acetone and distilled water, and dried prior to the test program. All openings on the sampling equipment were sealed while in transit to the test site.
3. IMPINGERS - The Greenburg-Smith impingers were cleaned with a warm soapy water solution and brushes, rinsed with distilled water and acetone, and dried. The impingers were sealed tightly during transit.

#### **TEST PROCEDURE**

Prior to performing the actual particulate matter sample runs, certain stack and stack gas parameters were measured. These preliminary measurements included the average gas temperature, the stack gas velocity head, the stack gas moisture content, and the stack dimensions at the point where the tests were being performed. The stack gas temperature was determined by using a bi-metallic thermocouple and calibrated pyrometer. Velocity head measurements were made with calibrated type "S" pitot tube and an inclined manometer. Velocity head measurements of 0.05 inches H<sub>2</sub>O or less were measured utilizing a micromanometer.

The sampling traverse points were selected so that a representative sample could be extracted from the gas stream. The traverse points were located in the center of equal areas, the number of which were dependent upon the distance upstream and downstream from flow disturbances (per EPA Method 1; see Figure 1).

FIGURE 2.

EPA METHOD 5 SAMPLING SCHEMATIC  
(DETERMINATION OF PARTICULATE EMISSIONS  
FROM STATIONARY SOURCES-QUARTZ GLASS PROBE)

Each particulate matter test run consisted of sampling for a specific amount of time at each traverse point. The type "S" pitot tube was connected to the sampling probe so that an instantaneous velocity head measurement could be made at each traverse point while making the test run, the stack gas temperature was also measured at each point (per EPA Method 2). Nomographs were used to calculate the isokinetic sampling rate at each traverse point during each test run.

The gases sampled passed through the following components: a stainless steel nozzle and quartz glass probe; a glass fiber filter, two impingers each with 100 ml of distilled water; one impinger dry; one impinger with 200 grams of silica gel; a flexible sample line; an air-tight pump; a dry test meter; and a calibrated orifice. The second impinger had a standard tip, while the first, third, and fourth impingers had modified tips with a 0.5 inch I.D. opening. Sample recovery was accomplished by the following procedures:

1. The pre-tared filter was removed from its holder and placed in Container 1 and sealed. (This is usually performed in the lab.)
2. All sample-exposed surfaces prior to the filter were washed with acetone and placed in Container 2, sealed and the liquid level marked.
3. The volume of water from the first three impingers was measured for the purpose of calculating the moisture in the stack gas and then discarded (per EPA Method 4).
4. The used silica gel from the fourth impinger was transferred to the original tared container and sealed.

#### LABORATORY ANALYSIS

The three sample containers from each sample run were analyzed according to the following procedures:

1. The filter was dried at 105 degrees C for three hours, desiccated for a minimum of one hour, and weighed to the nearest 0.1 mg. A minimum of two such weighings six hours apart was made to determine constant weight.
2. The acetone from Container 2 was transferred to a tared beaker and evaporated to dryness at ambient temperature and pressure, desiccated for 24 hours, and weighed to the nearest 0.1 mg. A minimum of two such weighings six hours apart were made to determine constant weight.
3. The used silica gel in its tared container was weighed to the nearest 0.1 gram.

The total sample weight included the weight of material collected on the filter plus the weight of material collected in the nozzle, sampling probe and front half of the filter holder.

## DATA

The field data sheets, calculation sheets, and nomenclature definitions are included in the appendix of this report.

### *5.2 CO<sub>2</sub> and O<sub>2</sub> Sampling and Analysis--EPA Method 3*

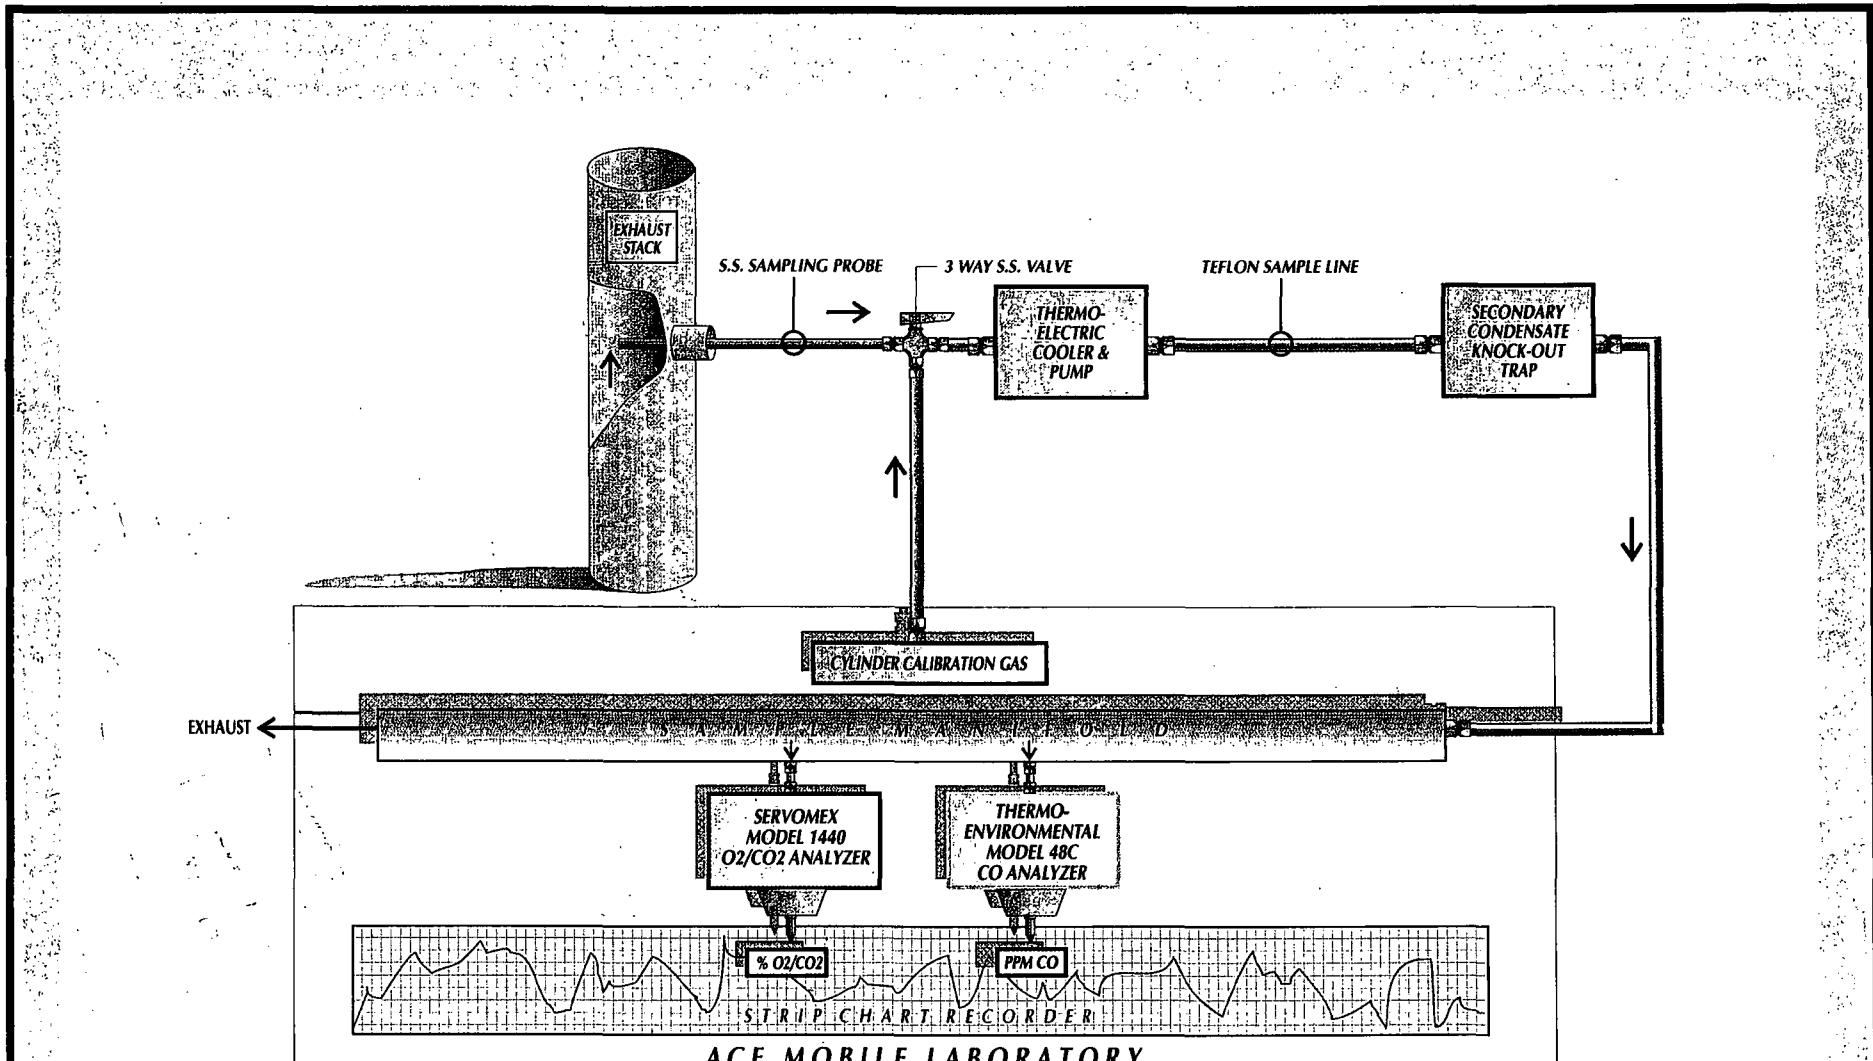

CO<sub>2</sub> and O<sub>2</sub> samples were collected by an integrated bag system. The sampling system consisted of a stainless steel probe, sample line from probe to a condenser, a small vacuum pump with a rotometer, and a TEDLAR bag.

The sampling procedure consists of the following leak-check and sampling techniques. Prior to sampling, the bag was leak-checked at 2 to 4 inches of water. The inlet to the condenser was plugged and a vacuum of 10 inches of Hg was pulled. The outlet of the pump was then plugged and the pump shut off. The vacuum held steady for at least 30 seconds. The sample line was then purged with flue gas and the bag was connected. Sampling was conducted at an appropriate constant rate at the same points and for the same length of time as the particulate sampling. At the conclusion of the run, the pump was shut off and the bag secured.

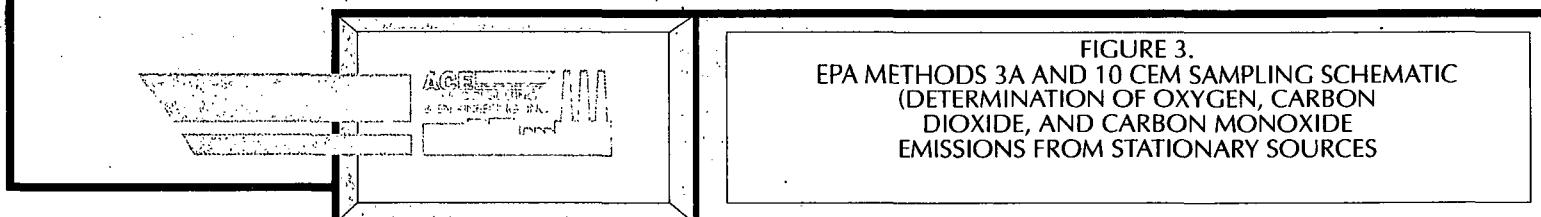

After leak checking the orsat gas analyzer, the average value for each gas was determined. The gas was measured until two values were obtained that fell within the specified variance of the gas tested. Data were recorded on the field data sheet and the bag was evacuated for the next sample run.

### *5.3 Determination of Carbon Monoxide Emissions from Stationary Source --EPA Method 10*

The sampling system is shown in Figure 3. A sample was drawn from the stack at a rate of approximately 2 SCFH. A stainless steel probe assembly was followed by a three-way stainless steel valve. The sample was pumped through an ice-cooled condensate trap followed by a 3/8" O.D. TEFILON sampling line. Calibration gases were introduced at the sampling interface (the three way valve) through another 3/8" O.D. TEFILON line. The sample pump delivered gases to a manifold system where one flow

DIOXIDE, AND CARBON MONOXIDE  
EMISSIONS FROM STATIONARY SOURCES)

is divided between a Servomex 1440 O<sub>2</sub>/CO<sub>2</sub> analyzer and a Thermo Electron Model 48C CO analyzer (NDIR with gas filter correlation). Excess flow is dumped to ambient. All instrument responses were recorded on strip chart recorders. The sampling system yields O<sub>2</sub>, and CO, concentrations on a dry gas basis.

Calibration gases consisted of CO, and O<sub>2</sub> standards in nitrogen. All calibration gases were certified NBS traceable, Protocol 1.

#### *5.4 Visible Emissions Testing--EPA Method 9*

The visible emission tests were performed in accordance with EPA Method 9. The observers maintain semi-annual FDEP certification for the performance of visible emission tests and attend the classroom lecture as required.

All procedures listed in Method 9 were followed including observer's position relative to the sun, distance from the stack, and line of sight. These items are noted on the visible emission data sheet. Observations were made at 15-second intervals and recorded to the nearest five percent. The final opacity was determined by calculating the average of the highest consecutive 24 readings of the observation period.

**SAMPLE CALCULATIONS**

PEAVY FUNERAL HOME  
 BLOUNTSTOWN, FLORIDA  
 INCINERATOR EXAUST STACK  
 3-29-2007

RUN NUMBER: 1

NOZZLE AREA SQ.FT.: 
$$A_n = \pi * (R_n)E_2 = \pi * (D_n/2)E_2 = \pi * [(D_n/2)E_2] * [(1\text{ft}/12\text{in})E_2]$$
  

$$= \pi * (D_n)E_2 / (576) = (3.1416) * [(0.375)E_2] / (576)$$
  

$$= 0.000767$$

METER ACTUAL CU. FEET: 
$$V_m = (V_m \text{ final}) - (V_m \text{ initial})$$
  

$$= (228.452) - (197.85)$$
  

$$= 30.602$$

METER STANDARD CU. FEET: 
$$V_{Mstd} = (K_1) * (V_m) * (Y) * \{(P_{bar}) + [(D_{Havg})/(13.6)]\} / [(T_{Mavg}) + (460)]$$
  

$$= (17.64) * (30.602) * (1.0091) * \{(30.14) + [(0.77)/(13.6)]\} / [(81.3) + (460)]$$
  

$$= 30.388$$

MEASURED SCF MOISTURE: 
$$V_{Wstd} = (K_2) * (V_c)$$
  

$$= (0.04707) * (32 + 4.7)$$
  

$$= 1.727$$

MEASURED % MOISTURE: 
$$B_{wm\%} = \{(V_{Wstd}) / [(V_{Mstd}) + (V_{Wstd})]\} * 100\%$$
  

$$= \{(1.727) / [(30.388) + (1.727)]\} * 100\%$$
  

$$= 5.38\%$$

STACK TEMP. Deg C 
$$T_{sc} = [(T_{Savg}) - 32] * 5/9$$
  

$$= [(884.8) - 32] * 5/9$$
  

$$= 473.8$$

VAPOR PRESSURE (in Hg): 
$$P_v = [2.718E[18.6866 - 0.00244 * (273 + (T_{sc})) - 4509.47 / (273 + (T_{sc})) - 149541 / ((273 + (T_{sc}))E_2)]] / 3.375$$
  

$$= [2.718E[18.688 - 0.00244 * (273 + (473.8)) - 4509.47 / (273 + (473.8)) - 149541 / ((273 + (473.8))E_2)]] / 3.375$$
  

$$= 11388.62$$

SATURATION MOISTURE %: 
$$B_{wsat\%} = \text{NA}$$
  

$$\text{NA}$$
  

$$\text{NA}$$

PERCENT WATER VAPOR: 
$$B_{wo\%} = B_{wm\%} \quad \text{IF} \quad B_{wm\%} < B_{wsat\%}$$
  

$$B_{wo\%} = B_{wsat\%} \quad \text{IF} \quad B_{wsat\%} < B_{wm\%}$$
  

$$= 5.38$$

GAS MOLECULAR WT.(dry): 
$$M_d = [(0.440) * (%CO_2)] + [(0.320) * (%O_2)] + [(0.280) * (%N_2) + (%CO)]$$
  

$$= [(0.440) * (%CO_2)] + [(0.320) * (%O_2)] + [(0.280) * [(100) - (%CO_2) - (%O_2)]]$$
  

$$= [(0.440) * (3.64)] + [(0.032) * (15.26)] + [(0.280) * (81.1)]$$
  

$$= 29.2$$

GAS MOLECULAR WT.(wet): 
$$M_s = \{(M_d) * [1 - (B_{wo\%}/100)]\} + [(18.0) * (B_{wo\%}/100)]$$
  

$$= \{(29.2) * [1 - (0.0538)]\} + [(18.0) * (0.0538)]$$
  

$$= 28.59$$

PERCENT EXCESS AIR: 
$$\%EA = \{(\%O_2) / [(0.264) * (%N_2) - (\%O_2)]\} * (100\%)$$
  

$$= \{(15.26) / [(0.264) * (81.1)] - (15.26)\} * (100\%)$$
  

$$= 248.11$$

AVERAGE VELOCITY(FPS): 
$$\begin{aligned} VSavg &= (85.48) * (C_p) * (ASRVH) * \{[(TSavg) + (460)] / [(Ms) * (Ps)]\} E^{1/2} \\ &= (85.48) * (0.84) * (0.33) * \{[(884.8) + (460)] / [(28.6) * (30.138)]\} E^{1/2} \\ &= 29.2 \end{aligned}$$

PERCENT ISOKINETIC: 
$$\begin{aligned} \%Iso &= \{(K_4) * (TSavg + 460) * (VMstd) / \{(Ps) * (Vs) * (An) * (time) * [1 - (Bwo\% / 100)]\} \\ &\quad * 100 \\ &= \{ (0.09450) * (884.8 + 460) * (30.388) / [(30.138) * (29.2) * (0.000767) * (60) * [1 - (5.38/100)]] \} * 100\% \\ &= 100.8 \end{aligned}$$

VOLUMETRIC FLOW(ACFM): 
$$\begin{aligned} QS &= (VSavg) * (As) * (60) \\ &= (29.2) * (2.357) * (60) \\ &= 4129.5 \end{aligned}$$

VOLUMETRIC FLOW(WVSCFM): 
$$\begin{aligned} WVSCFM &= (QS) * (17.64) * (Bwo\% / 100) * (Ps) / (TSavg + 460) \\ &= (4129.5) * (17.64) * (5.38/100) * (30.138) / (884.8 + 460) \\ &= 87.8 \end{aligned}$$

VOLUMETRIC FLOW(DSCFM): 
$$\begin{aligned} QSstd &= (QS) * (17.64) * [1 - (Bwo\% / 100)] * (Ps) / (TSavg + 460) \\ &= (4129.5) * (17.64) * [1 - (5.38/100)] * (30.138) / (884.8 + 460) \\ &= 1544.6 \end{aligned}$$

**PARTICULATE EMISSION DATA:**

POUNDS PER HOUR: 
$$\begin{aligned} lb/Hr &= (mg) * (QSstd) * (60) / [(VMstd) * (453600)] \\ &= (36.2) * (1544.6) * (60) / [(30.388) * (453600)] \\ &= 0.243 \end{aligned}$$

POUNDS PER SCF.: 
$$\begin{aligned} lb/SCF &= (lb/Hr) / [(60) * (QSstd)] \\ &= (0.243) / [(60) * (1544.6)] \\ &= 0.000003 \end{aligned}$$

GRAINS PER SCF.: 
$$\begin{aligned} Gr/SCF &= (lb/SCF) * (7000) \\ &= (0.000003) * (7000) \\ &= 0.018 \end{aligned}$$

GRAINS PER SCF @ 7% O<sub>2</sub>: 
$$\begin{aligned} &= (Gr/SCF) * (20.9 - 7.0) / [(20.9) - (%O_2)] \\ &= (0.018) * (13.9) / [(20.9) - (15.26)] \\ &= 0.045 \end{aligned}$$

GRAINS PER SCF @ 50% E.A.: 
$$\begin{aligned} &= (Gr/SCF) * [(100) + (%EA)] / (150) \\ &= (0.018) * [(100) + (248.11)] / (150) \\ &= 0.043 \end{aligned}$$

POUNDS PER MMBTU: NA

**AIR CONSULTING and ENGINEERING, INC.  
NOMENCLATURE**

%CO - Percent Carbon Monoxide.  
%CO<sub>2</sub> - Percent Carbon Dioxide.  
%EA - Percent excess air.  
%Iso - Percent isokenetics.  
%N<sub>2</sub> - Percent Nitrogen.  
%O<sub>2</sub> - Percent Oxygen.  
A<sub>n</sub> - Area of the nozzle, square feet.  
A<sub>s</sub> - Stack area, square feet.  
ASRVH - Average of the square roots of the velocity heads.  
Bwm% - Percent water vapor as measured.  
Bwo% - Percent water vapor.  
Bwsat% - Percent water vapor at saturation.  
C<sub>3</sub>H<sub>8</sub> - Propane.  
CH<sub>4</sub> - Methane.  
CO - Carbon Monoxide  
CO - Carbon Monoxide.  
CO<sub>2</sub> - Carbon Dioxide  
C<sub>p</sub> - Pitot coefficient.  
C<sub>so2</sub> - Concentration of Sulfur Dioxide, pounds per dry standard cubic foot.  
D<sub>Havg</sub> - Average meter orifice pressure differential.  
D<sub>n</sub> - Nozzle diameter.  
E - Denotes exponent.  
F - Fuel factor, standard cubic feet per million BTU.  
Gr/SCF - Grains per dry standard cubic foot.  
Hr - Hour.  
K<sub>1</sub> - A constant = 17.64.  
K<sub>2</sub> - A constant = 0.04707.  
K<sub>4</sub> - A constant = 0.09450.  
lb - pound.  
lb/Hr - pounds per hour.  
lb/MMBTU - Pounds per million British Thermal Units.  
lb/SCF - Pounds per dry standard cubic foot.  
M<sub>d</sub> - Molecular weight of dry stack gas.  
mg - Mass of filter and dried probe wash, milligrams.  
MMBTU - million British Thermal Units.  
M<sub>s</sub> - Molecular weight of wet stack gas.  
NO<sub>x</sub> - Oxides of Nitrogen.  
P<sub>bar</sub> - Barometric pressure, inches of Mercury.  
P<sub>i</sub> - A constant = 3.14159....  
PPM - Parts per million.  
P<sub>s</sub> - Stack pressure, inches Mercury.  
P<sub>v</sub> - Vapor pressure of water at stack temperature, inches Mercury.  
Q<sub>s</sub> - Volumetric flow rate, actual cubic feet per minute.  
Q<sub>Sstd</sub> - Volumetric flow rate, dry standard cubic feet per minute.  
R<sub>n</sub> - Nozzle radius, inches.  
SCF - Standard cubic feet.  
SO<sub>2</sub> - Sulfur Dioxide.  
T<sub>Mavg</sub> - Average meter temperature, degrees Farenheit.  
T<sub>Savg</sub> - Average stack temperature, degrees Farenheit.  
T<sub>sc</sub> - Average stack temperature, degrees Celcius.  
V<sub>lc</sub> - Volume of moisture collected in the impingers and silica gel, milliliters.  
V<sub>m</sub> - Metered volume, actual cubic feet.  
V<sub>m</sub> final - Final meter reading, actual cubic feet.  
V<sub>m</sub> initial - Initial meter reading, actual cubic feet.  
V<sub>Mstd</sub> - Metered volume corrected to standard conditions, standard cubic feet.  
VOC - Volatile organic compounds.  
V<sub>Savg</sub> - Average stack velocity, feet per second.  
V<sub>Vstd</sub> - Standard volume of water vapor, standard cubic feet.  
W<sub>VSCFM</sub> - Volumetric flow rate of water vapor, standard cubic feet per minute.  
Y - Meter correction factor.

**QUALITY ASSURANCE**

## **DRY GAS METER CALIBRATION STANDARD**

**Air Consulting and Engineering, Inc. (ACE) uses a Precision Scientific model 63123 wet test meter (Serial Number PS 001105) as its dry gas meter calibration standard.**

**The wet test meter has a one cubic foot per revolution capacity and is verified by water displacement annually. The latest verification occurred September 22, 2006**

## AIR CONSULTING AND ENGINEERING, INC.

Congratulations! Here is your wallet card signifying your successful Visible Emissions Evaluator certification on the date printed below. This certification is valid for six (6) months. To remain continuous certification, you must re-certify before or on the expiration date. Please mark your calendar accordingly. We appreciate your business and look forward to serving your certification needs in the future. ETA can support your program with a wide range of environmental services from measurements to litigation support. Please give us a call if we can be of service.

## EASTERN TECHNICAL ASSOCIATES

### LAWRENCE

met the specifications of Federal Reference Method B and qualifies as available emissions evaluator. Maximum emissions of white and black smoke did not exceed 7.5% opacity and no cooling error exceeding 15% opacity was incurred during the certification test conducted by Eastern Technical Associates of Raleigh, NC. This certificate is valid for six (6) months and expires on the date below.

**RE: Peavy Funeral Home - Omega Crematory**  
**Permit Number: 0130010-001-AC**

Dear Dagmar:

Enclosed is one copy of the compliance test results for the above referenced source. Also attached is the temperature strip chart. No visible emissions or objectionable odors were detected during the testing period.

The process rate was as follows:

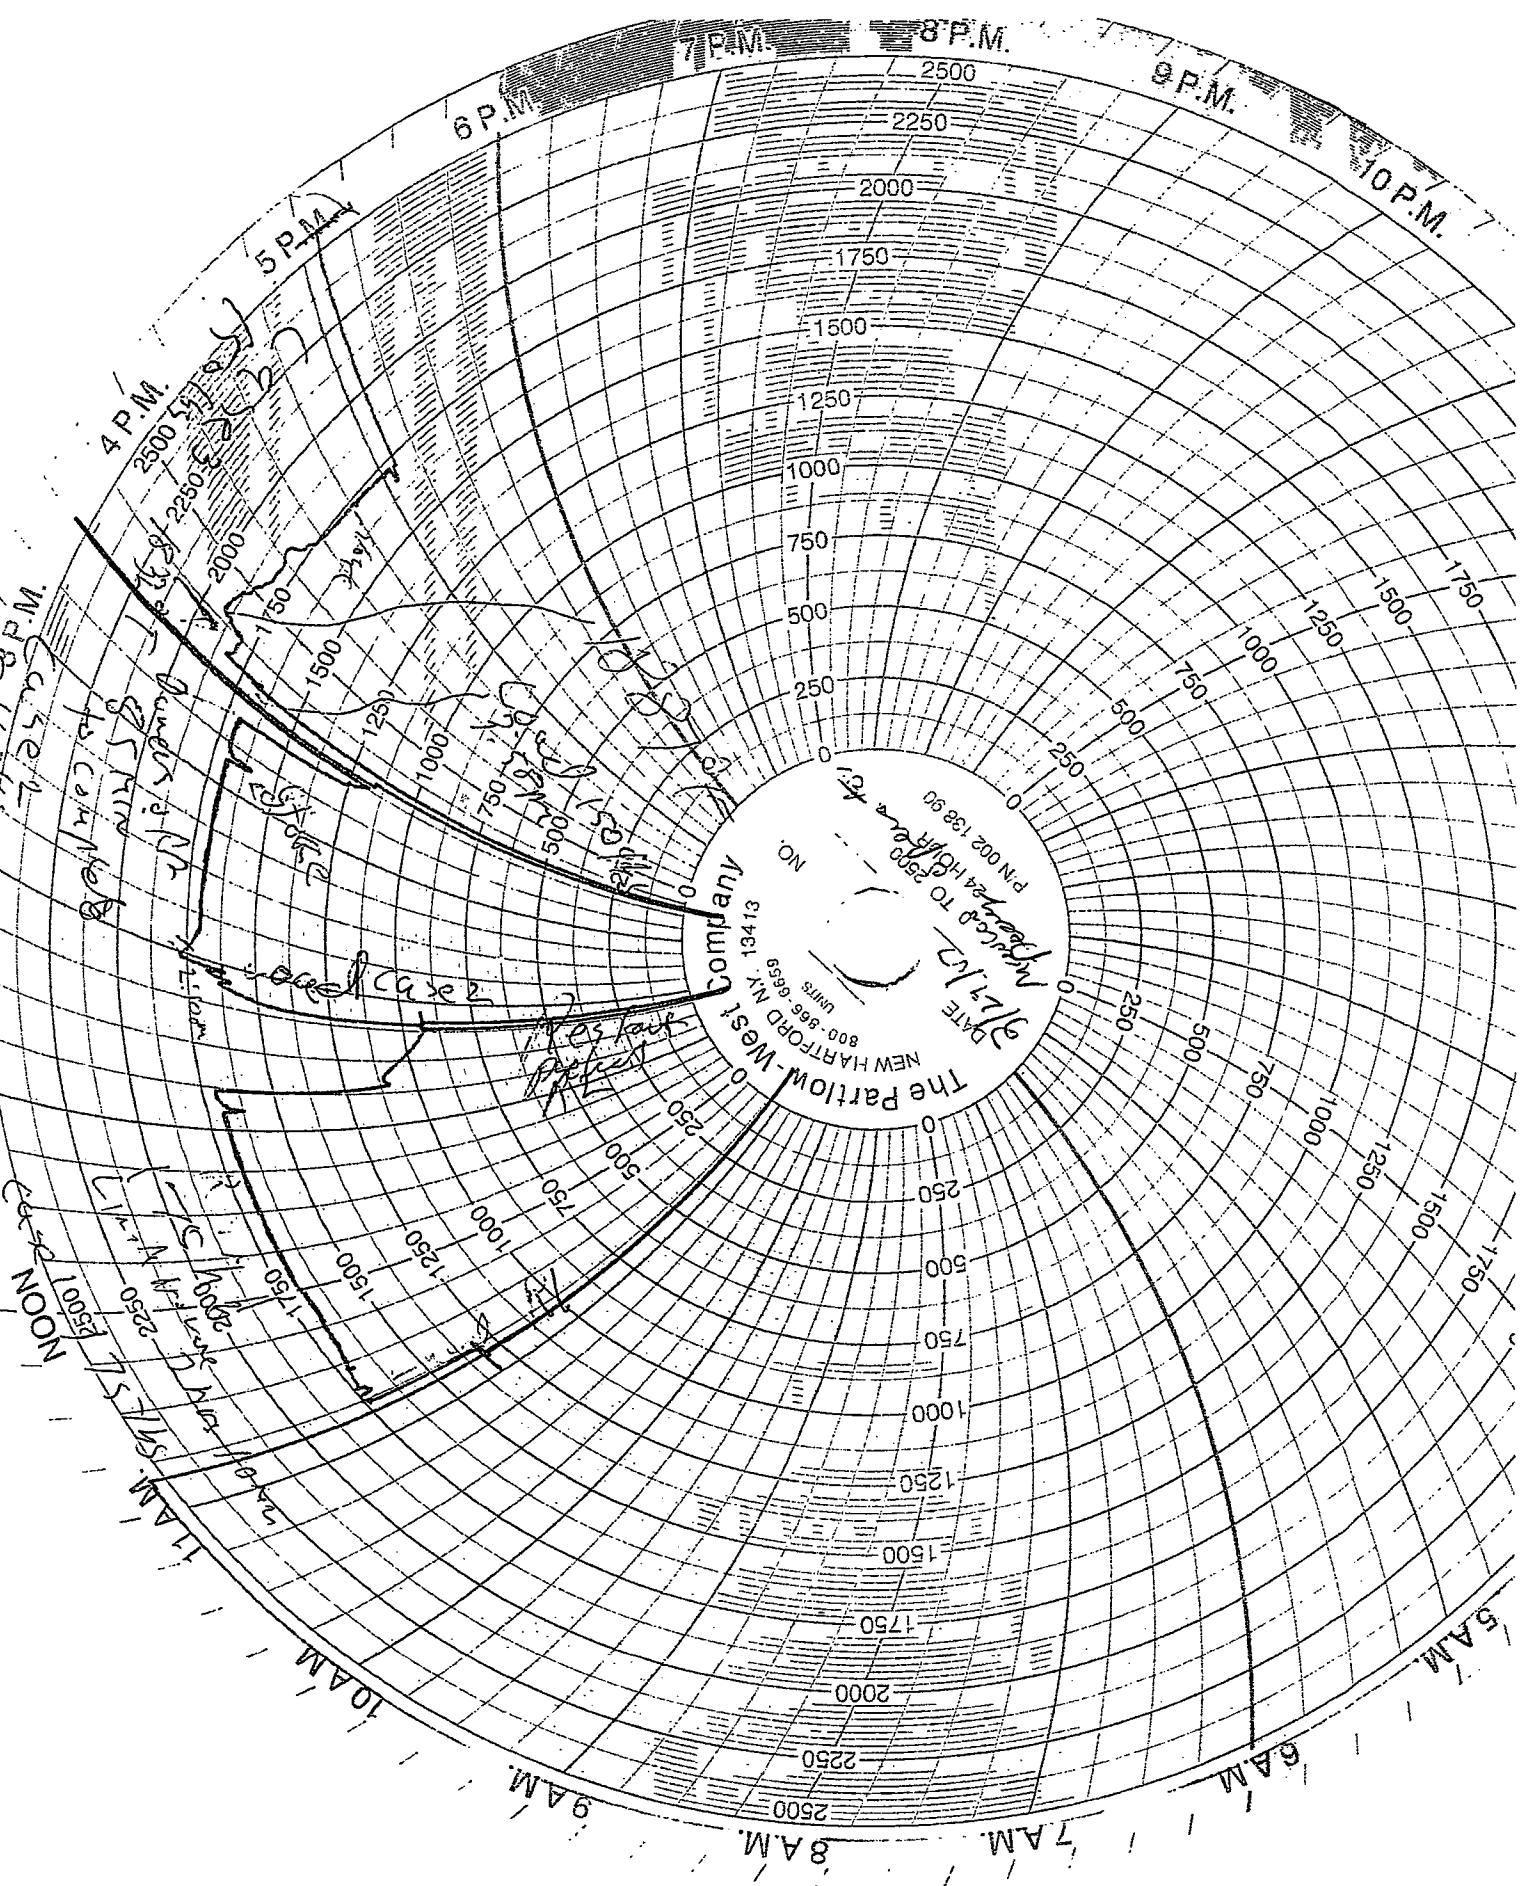

Run 1 175 lbs  
Run 2 160 lbs  
Run 3 150 lbs +  
AVG: 162 lbs

If you have any question please contact me at (407) 574-2021.

Respectfully submitted,  
AI ENVIRONMENTAL CONSULTING SERVICES, INC..

Luis Lloréns  
President/Project Manager

# The "Classic" Cremator

## PERFORMANCE BEYOND EXPECTATIONS

BUILT to exacting quality and safety standards and backed by a two-year limited warranty, the fuel efficient "Classic" outperforms every other cremator in its price range. Take a look at some of the performance benefits the "Classic" offers!

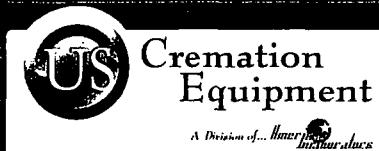

Exceptional standard features combine with professional expertise to deliver the product and service you demand. Unsurpassed in customer support, you can rely on U. S. Cremation Equipment's "Classic" to provide years of trouble-free operation.

### CLASSIC PERFORMANCE

- Cremate up to six bodies in a 10-hour work day
- Complete cremation every 60 - 90 minutes
- No cool down required between cremations
- Designed to cremate obese cases up to 800 lbs.
- Fully automatic PLC operating system

### CLASSIC FEATURES

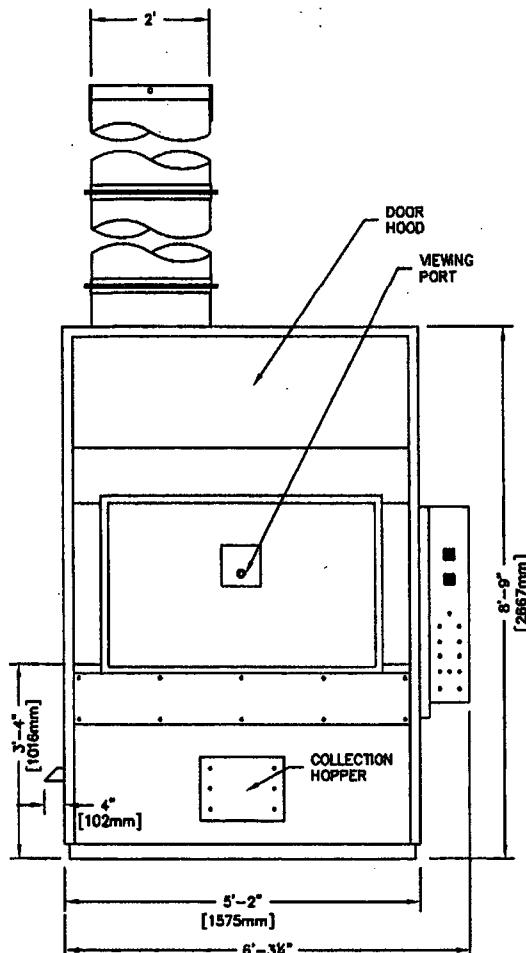

- Power charging door/dual hydraulic cylinders
- Primary chamber viewport
- Secondary chamber temperature recorder
- Color touch screen control – standard
- Powder coat finish with stainless steel trim

# RECOMMENDED CLEARANCES FOR CREMATOR STACK AND ROOF PENETRATION

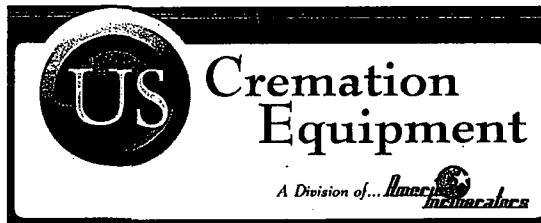

## NOTES:

- 1) USE NON-COMBUSTIBLE LINER AND MATERIALS.
- 2) CONSULT LOCAL BUILDING CODES AND ORDINANCES FOR ANY RESTRICTIONS WHICH MAY APPLY.
- 3) NON-COMBUSTIBLE FLASHING TO BE PROVIDED BY OTHERS.
- 4) AIR LOUVER TO ALLOW APPROXIMATELY 2500 CFM FREE AIR.
- 5) GAS REGULATOR TO BE PROVIDED BY OTHERS FOLLOWING INSTALLATION MANUAL INSTRUCTIONS.

## HUMAN CREMATION CHAMBER SPECIFICATION

---

### **EQUIPMENT:**

US Cremation Equipment a division of American Incinerators Co. - Multiple Chambered human Crematory, Natural Gas, Propane (LP) or Oil fired.

### **MANUFACTURER:**

US Cremation Equipment a division of American Incinerators Corp.

### **CONSTRUCTION STANDARDS:**

The American Incinerators cremation chamber shall be constructed of U.L./CSA listed components and will meet or exceed nationally accepted incinerator construction standards per the Incinerator Institute of America (IIA) publication guidelines; i.e.:

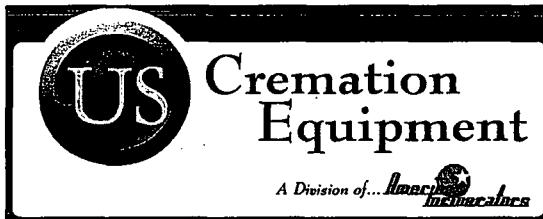

- A. Primary chamber will not exceed 60% of total furnace volumes. Flue connection shall not be considered part of furnace volume.
- B. Flame supervision through continuous ultraviolet scanning flame detectors on all burners.
- C. High temperature refractory construction with air-cooled walls to prevent excessive heat radiation.
- D. Exhaust gas temperature reduction.

### **INCINERATION CHAMBER DIMENSIONS:**

Chamber volumes:      Primary - 73 CF  
                                  Secondary - 71 CF

Structural footprint:      12'0" (L) x 5'0" (W)

Over-all dimensions:      12'7" (L) x 6'0" (W) x 9'2" (H) w/ std. hyd. door

#### OPERATING TEMPERATURE:

Temperatures are determined as a result of federal, state or local permitting authority operating standards.

Typical primary chamber setting: 1,000°F-1,200°F  
Typical secondary chamber setting: 1,400°F-1,800°F

#### RETENTION TIME:

In excess of 1 second.

#### CAPACITY:

One body and associated container per cremation cycle. 200 pounds per hour or 750 pounds per batch.

#### DRAFT:

Induced via refractory lined draft inducer.

#### SHIPPING WEIGHT:

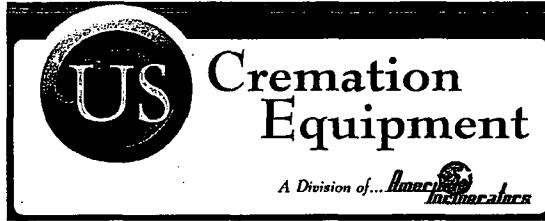

24,500 lbs.

#### EMISSIONS:

The American Incinerators cremation chamber shall meet or exceed federal, state and local environmental regulations.

#### EMISSION CONTROL:

Secondary chamber equipped with one, 1,500,000 BTU/HR burner. Also equipped with an electronic exhaust gas scanner system which temporarily suspends operation of the primary chamber burner.

### **STEEL CONSTRUCTION SPECIFICATIONS:**

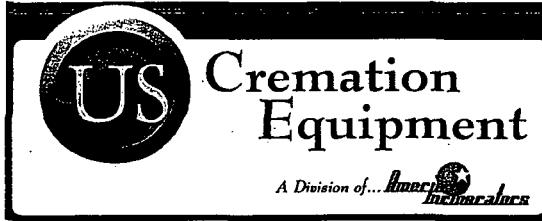

- A. The structure to be heavy 3" steel angle , square tube; 3/8" steel plate, seal welded construction.
- B. Subfloors to be 3/16" steel plate, seal welded construction.
- C. The exterior shell to be 12 gauge steel removable panels.
- D. Interior shell to be 10 gauge steel, seal welded construction.

### **INSULATION & REFRACRY SPECIFICATIONS:**

- A. Hot Hearth: 3000°F abrasion resistant castable refractory, monolithic cast 7" - 13" thick, 1 -1/2" recessed top and rounded, stressed arched bottom.
- B. Chamber Floors: 3000°F abrasion resistant castable refractory, 5" thick on top of 2" 2400°F light weight insulating castable.
- C. Chamber Ceilings: 3000°F castable refractory, monolithic cast, rounded, stressed arched, 5"-9" thick, topped by 2" 2400°F light weight insulating castable.
- D. Interior Walls: 2800°F. alumina-silicate firebrick, 2 1/2" x 4 1/2" x 9", all chambers are backed by 4" of 1900°F ceramic fiber insulation
- E. Stack: Lined with 2" of 2200°F insulating refractory.

### **SKIN TEMPERATURE CONTROL:**

Integral dual casing, completely air-cooled design to prevent excessive heat radiation.

### COMBUSTION EQUIPMENT:

- A. Combustion Air - One, 3 phase, 208-230/460V, 17-15.5/7.6 amp 7 hp air-blower motor (1,400 CFM)
- B. Primary Chamber - One 500,000 BTU/HR nozzle mix, gas-fired burner. Eclipse, North American, or equal.
- C. Secondary Chamber - One, 1,500,000 BTU/HR modulating, nozzle mix, gas-fired burner. Eclipse, North American, or equal.
- D. Burner Flame Safeguard - Control supervision on each burner via a flame safeguard relay and ultra-violet light detector.
- E. Low Air Pressure Safety Switch - Interlocked to all burners.

### EXHAUST GAS TEMPERATURE REDUCTION:

Hot air duct operating exit temperature: 900°F

### HOT AIR DUCT:

10 gauge carbon steel, high temperature 2" refractory lining, pre-drilled flanges, 24" Outside Diameter, 28" at flanges.

### UTILITY REQUIREMENTS:

#### A. GAS:

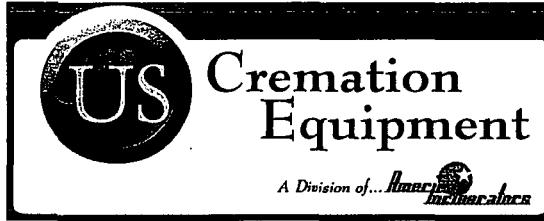

##### 1. Pressure:

- a) Natural Gas: 7" to 9" W.C.
- b) Propane: 11" W.C.

##### 2. Flow Rate: 2,000,000 BTU/HR

#### B. ELECTRICAL:

1. One, three phase, 208-230/460V, 17-15/8 amp connection for 5hp blower.

### **CREMATION CHAMBER LOADING/CLEAN-OUT DOOR:**

Hydraulically operated, refractory lined, upward movement guillotine style door with gate view port.

### **CREMATION PROCESS CONTROL:**

The cremation cycle is controlled by a programmable logic control (PLC) system. A visual confirmation of the system status is provided through control panel indicator lights and digital temperature display. Continuous fuel and air modulation is automatically controlled by a time/temperature actuated system. Operator interface is through two sets of simple push button controls and panel timer.

### **EXTERIOR FINISH:**

The cremation chamber is finished with grey hi-resistance powder coating with stainless steel trim. Back of unit is coated with an epoxy type black coating.

*Emissions Calculations*

US Cremation Equipment  
Model "Classic"

| Pounds Incinerated<br>Per Hour (Average) | Hours Per<br>Year | SO2<br>lb/ton | SO2<br>lb/hr | SO2<br>TPY | Nox<br>lb/ton | Nox<br>lb/hr | Nox<br>TPY | TOC<br>lb/ton | TOC<br>lb/hr | TOC<br>TPY |
|--|-------------------|---------------|--------------|------------|---------------|--------------|------------|---------------|--------------|------------|
| 200                                      | 8760              | 2.5           | 0.25         | 1.095      | 3             | 0.3          | 1.314      | 3             | 0.3          | 1.314      |

CO=100 PPM @ 7% O<sub>2</sub> MAX, Actual CO Emissions Measured at 3.49 PPM

CO = 100 PPM X 28 MW X 1700 DSCFM X 2.595E-09 X 60 min/hr = 0.74 lb/hr CO

0.74 lb/hr CO X 8760 hrs/yr X 1 ton/2000 lb = 3.24 TPY CO

Actual Emissions were measured at 0.04 gr/dscfm at 7% O<sub>2</sub>

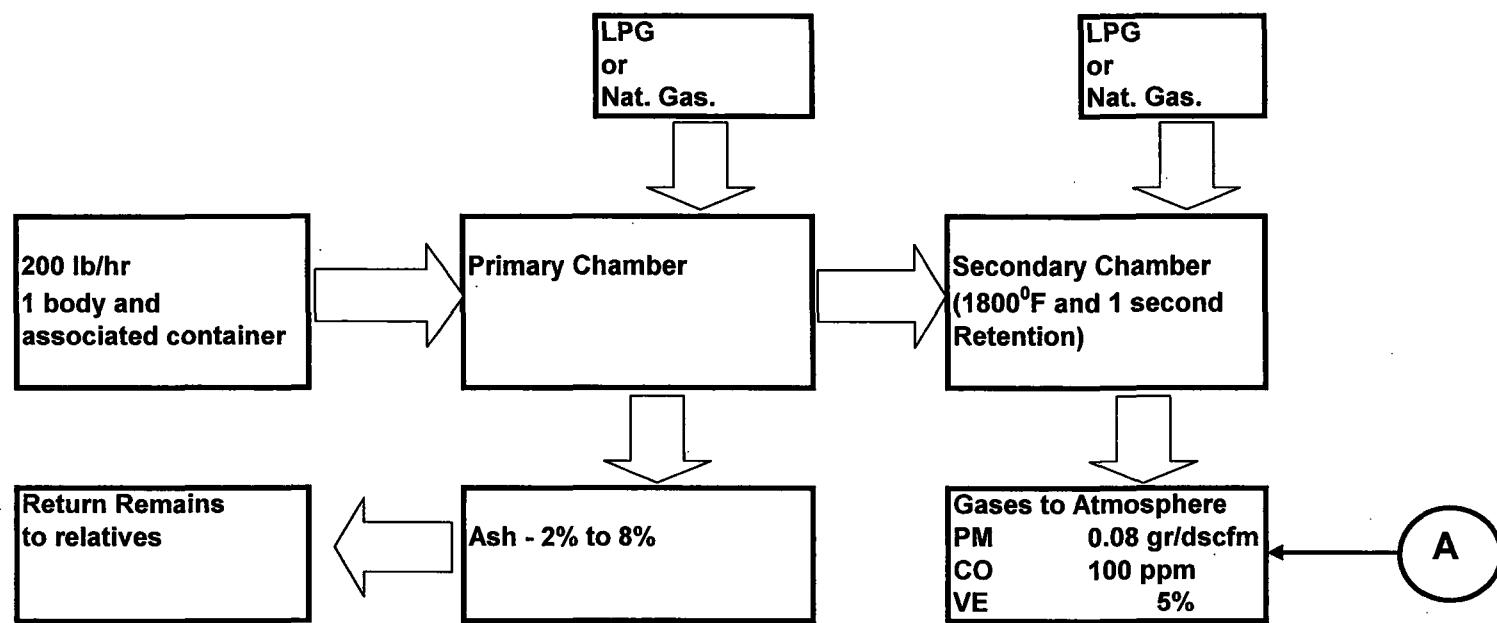

PM = 0.08 gr/dscf X 1 pound/7000 gr X 1700 DSCFM X 60 min/hr = 1.17 lb/hr PM

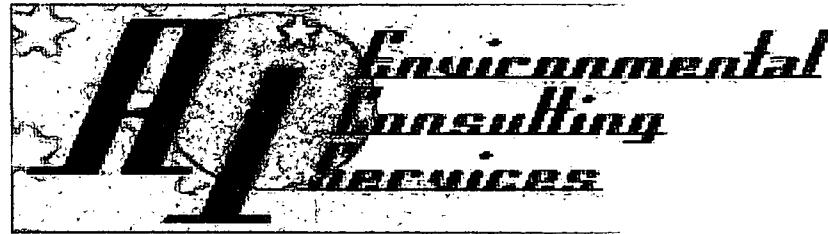

1.17 lb/hr PM X 8760 hrs/yr X 1 ton/2000 lb = 5.12 TPY PM
