* If there are multiple pieces of the same types of process equipment (more than one silo, etc), provide an identifier (location, numeric designation, capacity or product) specific to each piece of equipment.

Description of Facility

Below, or as an attachment to this form, provide a description of the concrete batching plant operations at the facility in sufficient detail to demonstrate the facility's eligibility for use of this air general permit and to provide a basis for tracking any future equipment or process changes at the facility. Describe type of concrete product(s) manufactured, all air pollutant-emitting processes, and identify any air pollution control measures used. Mobile source equipment information is not needed (eg.: trucks, bulldozers, front-end loaders, etc.)

The facility consists of an office, aggregate storage areas, two batch plants, storage silos, aggregate material conveying equipment and concrete mixing trucks.

Plant A - Emissions from the new split cement silo, flyash silo and truck load out are controlled by the central dust collector. The central dust collector is a Coneco PJ 1400. Weigh hopper emissions are controlled by a Coneco 1423 baghouse.

Plant B - Emissions from the cement silo, flyash silo and truck load out are controlled by the central dust collector. The central dust collector is a Coneco PJ 1400. Weigh hopper emissions are controlled by a Coneco 1423 baghouse.
