Operation and Maintenance Plan

We order all products that require emission standard through three main suppliers. All products are purchased thru our sales department as a special order since we do not stock paints, resins, thinners, etc.. We track these sales by part number, quantity, who purchased and what boat the merchandise was used on.

The products are sold in four different categories:

1. Customers, over the counter sales that customers physically take product elsewhere
2. Customer, over the county sales that customers are working on their boats in our yard
3. Contractors working on customer's boats in our yard
4. Internal use of products on our own equipment

We are requiring contractors to turn in data sheets indicating inventory of VOC-containing materials entering Audusson Marina property not purchased through our sales department.

Note: Audusson Marina supplies contractors with a full array of boating repair materials, parts and accessories. The contractors have an in-house accounts to purchase products that are discounted below retail price, so there would be no benefit for the contractor to buy the product outside Audusson Marina.

We have on hand the MSD Sheets on products that we sell.
