Re: Air Construction Permit Project No.: 0010006-004-AC/PSD-FL-212(A)
Amendment to Air Construction Permit No.: PSD-FL-212 and BACT
Amendment to PPSA Conditions of Certification No.: PA 74-04

Combustion Turbine No. 3

Dear Mr. Casserleigh:

This letter modification removes the equivalent federally enforceable nitrogen oxides BACT (Best Available Control Technology) limitations (lbs/hr and TPY) established in the air construction permit and Power Plant Siting Act (PPSA) Conditions of Certification, Nos. PSD-FL-212 and PA 74-04, respectively. PSD-FL-212 was issued/clerked on April 11, 1995. It has been determined that there was no rule basis for limiting the NO_x emissions in “lbs/hr” and “TPY” and that these numbers are merely equivalent emissions to the standards of “15 ppmvd, corrected to 15% oxygen, when firing natural gas” and “42 ppmvd, corrected to 15% oxygen, when firing distillate fuel oils (Nos. 1 and 2).” This letter modification also establishes that the continuous emissions monitor for nitrogen oxides will be used for compliance purposes. The changes are being incorporated into the Title V Air Operation Permit under renewal, No. 0010006-003-AV (see Specific Conditions Nos. C.0., C.6. and C.13.c.). Therefore, the following are changed:

1. Specific Condition 6. (PSD-FL-212 and BACT).

Allowable Emissions. The maximum allowable emissions from the DHCT3, when firing natural gas or distillate fuel oils (Nos. 1 or 2), in accordance with the BACT determination, and at 95 - 100% percent load based on the manufacturer's curves submitted to the DEP, shall not exceed the following limits except during periods of start up, shutdown, load changing, fuel switching and malfunction pursuant to Rule 62-210.700, F.A.C., and the BACT analysis.

Pollutant	Fuel	BACT Standard	Lbs/Hr	TPY
