Re: Final Outer Continental Shelf Air Permit Decision, Chevron Exploratory Operation in Destin Dome Block 97

Dear Sir or Madam:

Enclosed is the Final Determination, Response to Comments Document, and Outer Continental Shelf Air Permit OCS-FL-001 for the proposed exploratory, natural gas drilling operation by the Chevron U.S.A. Production Company in Destin Dome Block 97. Outer Continental Shelf Air Permit OCS-FL-001 will be effective 30 days from the date of service of notice of the final air permit decision. Service of notice of the decision is being accomplished through this correspondence and by the publication of notices in the Miami Herald, Orlando Sentinel, Pensacola News-Journal, Tallahassee Democrat, and Tampa Tribune. The anticipated publication date is January 10, 1994.

Appeal procedures concerning this Outer Continental Shelf air permit are outlined in Title 40 of the Code of Federal Regulations, Part 124, Section 19 (40 C.F.R. Section 124.19). If you have any questions, please contact either Mr. Scott Davis of my staff at (404) 347-5014 or Mr. Alan Dion of the Office of Regional Counsel at (404) 347-2335, ext. 2131.

Sincerely,

Bruce P. Miller for

Winston A. Smith, Director
Air, Pesticides, and Toxics
Management Division

Mr Davis,

These handwritten letters represent the opinions of six hundred-eighty four Floridians, all of whom are completely opposed to oil or gas drilling in Florida's coastal waters. Please consider these letters to be an indicator of the will of the people who will have to live with the results of any offshore drilling program.

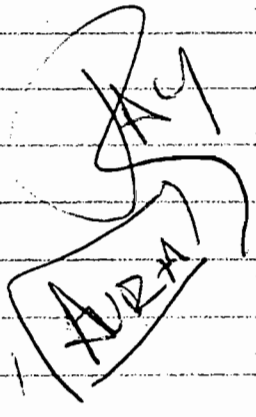
Floridians do not want to see Chevron, or any other corporation, risking our beaches, our fisheries, or our tourism industry in an expensive pursuit of a dwindling resource. Floridians would much prefer to see the time, money, and energy invested into clean, renewable energy sources. Offshore drilling is not our best option.

Please do everything in your power to prevent this well and protect our coasts.

Sincerely
Chris Jasurek.
Chris Jasurek Florida Environmental Campaigns

Scott Davis

I am OPPOSED to
Off-shore Drilling
Be a little more Human
my Friend! You Are Fucking
Killing us
Fuck Political Power!



Dear Sir,
I am writing this letter in Regards to our Environment created by God. In Genisis one it is stated that man has rule over the land, Birds & Sea. God makes us accountable for what we do. It is not only a Sin & Shame the way we treat ourselves and the earth. But it is just sheer devastation. Are you going to be accountable at the time of your Judgment? Knowing & God knowing what you have allowed to happen.

God Bless, Jesus Loves You, Don Ben

Scott Davis,
General CONSUSUS says off shore drilling is the worst possibly idea ~~[illegible]~~ for many reasons. (Too numerous to list)

Wendy Bingham
Orlando, FL

Dear Scott Davis

Off-Shore Drilling Sucks. I'm a conservative Republican and we think this sucks. Okay!!

Jason Seymour
200 Wessex Rd. Alt. Spgs. FL

Scott,

Feed them beens + give them gas. Leave ours alone

Thanks
David M. Fuegl

Hey Scott,

Please stop drilling! It's driving me crazy!!

Thanks,

Greg

Sincerely,
Kyera Fredkoff

10849 Heather Ridge Circle
Orlando, Fl 32817

Dear Mr. Davis

As a lifelong resident of the beautiful state of Florida, I am requesting that NO ONE be allowed to begin oil drilling in the Gulf of Mexico. I am currently attending the University of Central Florida in Orlando. I was born and raised in the county which is home to one of the last pristine bays in the state. It is very important to me that the waterways bordering the Gulf remain in their current state and not be endangered by oil spills and traffic of shipping. I can be contacted at (407)679-8342.

Sincerely,

Michael Hanson

STOP THE DECLINE OF WATER HABITATS IN FLORIDA.

Avoid off-shore drilling. It is a mistake and its consequences are detrimental to our environment.

Dear Scott Davis, I am opposed to off shore drilling

Holly L Griffin
Winter Park, FL

Scott Davis,

As a Florida resident and voter I am opposed to off-shore oil drilling. Although I fully understand the need for more domestic fuel products I cannot, and will not, condone the drilling and supply of oil wells. I know, all too well, that at the present time there is more crude oil in the United states than in the middle east. more drilling is not the answer.

Thomas Krantz
1101 Howell Creek Dr
Winter Springs FL 32708

Dear Mr. Scott Davis -

I am opposed to offshore oil drilling on Florida's coasts. Please consider the horrendous effects that your "yes" to the oil companies will have on the fragile Florida environment & its wildlife. Thank you.

Dear Scott,

Stop the off shore Drilling!!!

Now!

Brian Schlz

Scott Davis

Florida is a state with a living coast. As a scuba diver, I have seen the life in the coastal waters and I do not want to see the life smothered and killed by the accidental spillage and ship wrecks that have already happened on the west coast of America. Floridians will not stand for this.

Dear Scott Davis,

I represent many of the people of Florida who oppose the drilling off our coast.
Please consider our animals and stop this useless action.

Sincerely
J. Morris

Ms. Mr. Davis -

I am adamantly against ~~ff~~ offshore drilling.

This is a terrible harm to all marine life - and eventually to humanity.

Thank you,
Elizabeth F Kerr

To Whom it May Concern 10/24/93

Please stop the unnecessary off drilling offshore. Please protect our precious coasts.

Thank you

Sandra Snyder

Stop offshore drilling. We need clean renewable energy not new oil spills.

Melinda
Wittmann

I am opposed to off shore Drilling Do everything you can to protect our cost please!!

CARLOS NAJERA
P.O. Box 420164
Kissimmee FL 34742

Dear Mr. Davis:

I am writing to urge you to please protect our beautiful Florida coasts! I am firmly opposed to offshore drilling. We are in need of clean, renewable energy sources. With today's technology, we do not need to destroy our natural lands to obtain our energy — not more oil spills!

I appreciate your thoughtful consideration.

Sincerely,
Alfina Davis

Orlando, Florida
(407) 282-6056

Dear Scott Davis:

I don't believe that we should have off shore drilling. We can use renewable sources such as solar and wind energy. Exploring these options are much cheaper than building more oil wells. We need electric cars and hydrogen powered cars!! — not gasoline powered ones!

Oil companies are not on our interests!! They need to get creative and convert their industries to renewable resources.

Jennifer Staton

MR. DAVIS
I oppose off-shore drilling.
Nicole Piccillo
4250 Skyway Cocoa, Fl.

Suzanne Apon
Satellite Beach, Fl.

I am opposed to offshore drilling! I live on the beach and it is one of the joys of my life. But every time I think about an oil spill I cringe. Now can I share my current happiness with my children if all I can show them is black and death. What will my world teach them then? Will it say breathe now because you won't be able to, stay away from the shore because all it contains is death. I won't even be able to share memories with them because my wonderful dream will have turned into a far nightmare!

I am opposed to off shore Drilling

Robt Landry

GOVERNORS OFFICE

MONTGOMERY 36130

JIM FOLSOM
GOVERNOR

November 5, 1993

Mr. Winston A. Smith, Director
Attn. Mr. R. Scott Davis
Air, Pesticides, and Toxic
Management Division
U.S. Environmental Protection Agency
Region IV
345 Courtland Street, NE
Atlanta, GA 30365

Dear Mr. Davis:

This letter is in reference to Permit Number OCS-FL-001.

Alabama is benefiting from the economic stimulus brought on by oil and gas exploration and production in Mobile Bay. The nation will for many years continue to benefit from the energy produced there. There is an additional environmental bonus when clean-burning natural gas produced in Mobile Bay backs out other fuels that produce more harmful emissions in space heating and electricity generation.

Now, we have a chance to increase the supply of natural gas if Chevron's proposed drilling project in the Northeast Gulf of Mexico is successful.

Chevron's plan is to bring natural gas from the Destin Dome area into the Mobile area. This additional supply will extend the duration and, hopefully, the magnitude of the economic and other benefits mentioned above.

Therefore, I respectfully urge your granting the air permit that is required for the project to move forward.

With warmest personal regards, I remain

Jim Folsom

RE: Permit No. OCS-FL-001

Dear Mr. Davis:

I understand there has been some opposition to the drilling of a natural gas well in the northeast Gulf of Mexico, about 30 miles from Florida, in an area where two wells have already been drilled. This area is not, in my view, "offshore Florida". It is almost as close to landfall in Alabama as it is to landfall in Florida.

In any event, the area is in federal waters and any resources to be found there belong to the people of the United States, not to any individual state.

Laws governing air emissions in that area are also federal, and the proposed project will be designated a "minor source" under those laws.

States such as Alabama, Louisiana, Texas, and Mississippi continue to contribute toward providing energy security for the entire country. The industry has proven itself with regard to safety and environmental performance. Natural resources underlying federally leased property cannot and should not be regulated at the state level.

Hence, I respectfully disagree with the opposition on this issue, and I urge that you issue the required air permit for this minor source of air emission -- a potentially significant source of domestic clean-burning natural gas.

Sincerely,

James S. Clark

James S. Clark
Speaker

NOV 5 1993

emissions are expected to be much less.

- Chevron provided emission compliance data and performance specifications on the main rig engines and marine vessel engines proposed for this project to substantiate the emission calculations provided in the air permit applications.

Therefore, we urge that you issue the air permit required under federal law.

Sincerely,

Michael A. Figures

Atlanta, GA 30365

RE: PERMIT NUMBER OCS-FL-001

Dear Mr. Smith:

The Alabama Permanent Oil and Gas Study Committee, which is a legislative interim committee, is concerned that opponents of offshore drilling in Florida will adversely affect the Destin Dome natural gas exploratory effort planned by Chevron Production Company.

The gas in Destin Dome underlies Federal leases. The continued development of domestic natural resources in the Gulf of Mexico is vital to the energy security of the Nation by providing future supplies of natural gas and avoiding supply disruptions both in the southeast region of the country as well as the U.S. as a whole. If the need for natural gas volumes is not met with domestic resources, the demand for energy will only be further met by increased imports of Canadian gas.

Supplies of natural gas reserves currently on production from the central and western Gulf of Mexico are declining. Continued development of existing proven resources, as well as drilling in exploratory basins of the U.S., is required to sustain current deliverability.

We urge you to issue the air permit required for Chevron's well in the northeast Gulf of Mexico. The project will be a minor pollution source in that the emissions will not exceed 250 tons per year, according to scientific data.

As your review has indicated, the emission of regulated pollutants involved are not expected to exceed that level.

Again, we urge issuance of the required air permit.

Respectfully submitted,

Walter E. Penry, Jr.

Attention: Mr. Scott Davis

Dear Sirs:

Given the fragile eco-system of the State of Florida and our Gulf of Mexico Region, the Florida Legislature has, by resolution, expressed great concern over drilling activity by supporting a 100 mile ban on drilling activities.

The air emissions standards you and Chevron are discussing are appreciated. It seems every practical step is being taken to safeguard our air quality and so wish to express support for this environmentally friendly effort.

It is my understanding the emissions permit will cover not only the diesel emissions on the platform, but also the marine traffic to and from the site.

Thank you for your time and attention to this important matter.

With warm regards,

Bo

Region IV
345 Courtland Street, NE
Atlanta, GA 30365

Dear Mr. Davis:

Alabama has benefitted tremendously from the economic stimulus resulting from oil and gas operations in Mobile Bay. As elected officials of Mobile County, we express our gratitude.

Alabama is also concerned with the quality of its environment. As elected officials of Mobile County, we must be assured that future activities of the industry take that fact into account.

We are convinced this is the case with the Destin Dome project proposed by Chevron.

The facts are these:

- A minor pollution source by definition is a source of air emission that contributes less than 250 tons/yr. of any regulated pollutant.

- The maximum potential level of regulated emissions projected from Chevron's proposed drilling activity in Destin Dome is as follows:

CO	90.91 tons/yr.
SO2	226.62 tons/yr.
NOx	238.27 tons/yr.

- Included in the above calculations are vessel emissions from the marine vessels supporting the drilling activity.

- The above projections are conservative. Actual

4. In 1972 I began going to Destin and enjoying the lovely beaches. I bought a condo in August 1988 at Shoreline Towels # 1064 Destin, Fla., which is located right on the beach. If I thought this Chevron project would harm my beautiful view and lovely beach I would not be writing this letter. All my life the waterways of Louisiana has been a form of my entertainment, from deep sea or surf fishing,to water skiing or just being in a pleasure boat in the Gulf.

With all my experiences in the Gulf I urge you to issue this permit to Chevron to drill for the clean burning natural gas for the benefit of Florida. One reason is because Florida consumes 50 times more energy than it produces therefore the people of Florida will benefit and not be harmed in any way..

Yours truly,

Attn: Mr. Scott Davis

I urge you to approve Chevron's Destine Dome Air Emission Permit.

This will be the third well and judging from the results of the first two, Chevron has proven to be environmentally sensitive and responsive to all EPA rules.

As a lifelong citizen of Florida, I encourage you to approve this permit.

Sincerely,

Davis M. Rembert

November 8, 1993

Mr. Winston A. Smith, Director
Air, Pesticides and Toxic Management Division
U.S. EPA, Region IV
345 Courtland Street, N.E.
Atlanta, GA 30365

Dear Mr. Smith,

I am writing to you in favor of granting Chevron the air emissions permit based on their meeting the requirements of it. If Chevron complies with the rules and regulations set forth by government, I see no reason why it wouldn't be granted.

The opponents should be trying to change the rules if they are against granting permits for small amounts of air emissions. Of course, the opponents simply want to let their opinions be known and will use any opportunity that presents itself. After all, this is a country that allows free speech.

Personally, I am in favor of Chevron drilling this exploratory well and if all goes well, I am in favor of Chevron pumping the natural gas to the surface for our energy uses. Until alternative energy sources can be found and made practical for today's society, I believe we must harness the energy we have available to us at the least possible environmental damage. To me, natural gas provides an excellent source of energy at minimal risks.

Thank you for allowing me the opportunity to express my opinion.

Sincerely,

Susan A. Hoeben

U.S. EPA, Region IV
345 Courtland Street, NE
Atlanta, GA 30365

Dear Mr. Smith:

I am writing in support of Chevron's proposed natural gas exploratory well, which will be located off the coast of Pensacola. Natural gas provides a clean energy source and finding new reserves such as the "Destin Dome" will help reduce our dependence on foreign sources.

Much of the focus in the Pensacola area has been on the problems associated with oil wells in the Gulf. Chevron's permit application is for an exploratory natural gas well that will only be allowed to operate for ten months. During that time, they will be trying to determine the exact location and extent of the reservoir of natural gas, but will not be pumping anything.

It is my understanding that you are considering granting Chevron an air emissions permit, which is the final stage in their being able to look for natural gas. Chevron's exploratory gas well will be using two drilling-platform generators and several boats for platform to shore transportation. These should not have any negative impact on the air quality in our area, and will in fact operate below the standards in the permit, so I feel that you should grant the permit to Chevron.

Sincerely,

Carol J. Trivett

Outer Continental Shelf Air Permit
Permit Application OCS-FL-001
Application by Chevron U.S.A.
Production Company Inc.
Exploratory Drilling Operation
Destin Dome Block 97

Gentlemen:

Mobil Exploration & Producing U.S. Inc. (MEPUS) has acquired interest in the Chevron proposed exploration drilling project in Destin Dome Block 97. As a working interest owner, MEPUS will participate in funding the project and any subsequent development activity if warranted.

MEPUS has reviewed permit application number OCS-FL-001 and concurs that the proposed activity should not exceed the emission limits proposed by the Applicant. Chevron U.S.A. Production Company Inc. has met the criteria for a minor source permit under both U.S. E.P.A. and Florida D.E.P. criteria.

MEPUS recommends that the permit be approved and issued in the form proposed by the EPA in the draft form permit attached to the public notice.

Should you have questions or comments regarding MEPUS's recommendation, please contact A. A. Pontesso, Sr. Staff Environmental and Regulatory Engineer at 504/566-5927.

Very truly yours,

James D. Abercrombie
Producing Manager

RE: Minor source emissions permit to Chevron for natural gas exploratory well, Destin Dome area, Escambia County coast

Dear Mr. Smith:

Grant this permit! I've looked pretty seriously at both sides of this issue and am convinced that giving Chevron the go-ahead is the soundest decision anyone would make. How often do you have an opportunity with such large upside potential (if this well identifies a new source of natural gas, we have the chance to enhance our reserves of a clean energy source, reduce air pollution from the burning of more harmful fossil fuels, and reduce dependence on foreign energy), and essentially no risk (the likelihood that Chevron's project will pollute the air, defile the shoreline or otherwise cause any negative impact are so negligible as to be nonexistent).

I'm an environmentalist, and am loathe to support a wide range of projects because the risk (not the certainty, just the *risk*) outweighs the potential benefit. But progress in any field -- medicine, business, interpersonal relationships -- only happens when intelligent decisions are made. And intelligent decisions do not require zero risk; they require only that risks be minimized (as they are here by a host of regulations, corporate responsibility and reasonability on Chevron's part, and by the very nature of the project itself) and that the potential return be both highly probable and also sufficient to justify the risk (as a 1 percent increase in the nation's clean energy supply certainly is). If every decision waited until there was no potential risk at all, we would still be living in caves, dressed in animal skins. And if every decision had to completely satisfy every special interest group, no matter how directly or indirectly affected, we wouldn't even have gotten as far as the caves or the animal skins.

I am totally in support of the Chevron drilling proposal. And as for air emissions issues, I believe that emissions from drilling-platform generators and platform transport boats are likely to be well within acceptable levels, and so should pose no obstacle to issuance of the permit.

If you have questions or need any additional information, please don't hesitate to contact me.

Yours truly,

Karla Kizzort

Atlanta, GA 30365

Dear Mr. Smith:

I am writing this letter in support of the exploratory gas well that Chevron plans to set-up off the coast of Escambia County, Florida (Destin Dome).

I, like many other people, enjoy the beaches that Florida has to offer. And, I see NO reason why this potential fuel source should interrupt or reduce that enjoyment.

The most important issue here is this country's ability to produce more efficient and cleaner methods of energy -- I believe natural gas is the answer.

Growing up in West Virginia, where my father made a 35-year career of working with Consolidated Natural Gas Corporation, I lived with a gas furnace, dryer, refrigerator and stovetop. It can not be topped as a great energy source.

My husband and I just built a new home and we chose gas as our primary energy source.

Florida and especially the folks in Escambia County who are opposing this natural gas drilling project, need to join the 21st century and look beyond their cause to find the truth about this project.

Sincerely,

Kimberly K. Gerato

Atlanta, Georgia 30365

Dear Mr. Davis:

I have recently read that Chevron has been trying to drill for natural gas at a well here in Florida, it is named "Destin Dome". The article brought to light many of the problems facing industry today. In an effort to bring new products to the marketplace and move ahead into the 21st century, industry is oftened stymied by government permits and enviromental issues. My understanding of the Destin Dome case is that all approvals and requirements have been met by Chevron, but still a permit has not been issued.

As you may be aware of, Florida is a rapidly growing state and is predicted to be the nation's third largest by the year 2000. Our state is very dependent upon outside energy sources and the demand is ever growing. To put it simply, FLORIDA NEEDS NATURAL GAS NOW. I have watched in the past few years as the air quality in our city has degraded. Local television stations now report pollution indexes on the news. Automobiles in our county are now required to have annual emissions tests. And probably the most compelling argument for natural gas is the recent oil spill we had here in Tampa/St. Petersburg.

I urge you not to delay Destin Dome any longer and to issue the permits necessary for Chevron to drill. We cannot delay any longer. Florida, and this nation, needs natural gas today.

Respectfully Yours,

Curt Kurzenhauser

345 Courtland Street, NE
Atlanta, GA 30365
Attention: Mr. Scott Davis

Re: Proposed Outer Continental Shelf Air Permit for Chevron U.S.A.'s proposal to drill for natural gas in Destin Dome Block 97 off the coast of Florida.

Gentlemen:

Chevron U.S.A. ("Chevron") proposes to drill an exploratory natural gas well approximately 30 miles off the coast of Pensacola, Florida in Destin Dome Block 97. To do so, Chevron requires the issuance of an Outer Continental Shelf air permit by the Environmental Protection Agency ("EPA") pursuant to 40 C.F.R. Part 55. Chevron has filed a permit application with the EPA seeking such authority under Application Number OCS-FL-001.

Florida Gas Transmission Company ("FGT"), a major interstate gas pipeline company, is the primary provider of natural gas transportation service to the state of Florida, and supports Chevron's efforts to develop this supply of natural gas. For natural gas, the clean-burning, environmentally-preferable fuel of choice, to remain readily available for consumption, the producing segment of the industry must be allowed to explore and develop areas where natural gas is likely to be found, so long as such activities are performed in an environmentally responsible manner. The development of gas reserves at Chevron's drilling site will be of particular benefit to many of FGT's customers.

Based on the foregoing, and assuming that Chevron's activities are to be performed in an environmentally sound manner, FGT strongly urges the EPA to issue the required air permit to Chevron to enable the proposed drilling activity.

Respectfully submitted,

Peter E. Weidler

Gentlemen:

This letter is to express my support for approving the Outer Continental Shelf Air Permit for Chevron offshore exploratory drilling in the Destin dome area. I am a housewife, an environmentalist, and have NO vested interest in Chevron.

As an environmental chairman for the National Council of State Garden Clubs (300,000 members) and a resident in the panhandle area of Florida, I have followed this issue with great interest. I am appalled that we continue to cripple PROGRESS in this country and at the same time PENALIZE industry. No wonder our country is in the shape it is in!

Drilling natural gas wells will not spoil our air, our beaches, our fisheries or our emerald waters. My concern is for a clean source of energy for Florida and the United States.

Let's get on with it!

RE: Chevron U.S.A. Production Company, Inc.
Outer Continental Shelf Air Permit
Destin Dome Block 97
Permit Application Number OCS-FL-001

Dear Messrs:

As the chairman of the Joint American Petroleum Institute (API)/Offshore Operators Committee's (OOC) Gulf of Mexico Air Quality Study (GMAQS) Task Force I would like to comment on the subject air permit application. The API/OOC GMAQS Task Force is an offshore industry group, composed of air pollution professionals, working closely with the Minerals Management Service (MMS) on the GMAQS. As you are aware, the GMAQS was mandated by the Clean Air Act Amendments of 1990 to assess the effects of current and future OCS development, in the central and western Gulf of Mexico, on nonattainment areas for ozone in Texas and Louisiana.

Chevron's permit application represents the first application for authority to construct and operate under the EPA's Outer Continental Shelf Air Regulations (40 CFR Part 55, 57 **FR** 40792, 9/04/92) in the eastern Gulf of Mexico. I am familiar with ARCO Alaska Inc.'s Beaufort Sea Project which has been given preliminary approval by EPA Region X (PSD/OCS X93-01) under both Prevention of Significant Deterioration (PSD, 40 CFR Part 52.21) rules and OCS air regulations. ARCO Alaska Inc.'s application is the first permit approved under 40 CFR Part 55 requirements. Control technologies approved in ARCO's exploration project, i.e., ignition timing retard, reduction of sulfur in fuel, and the control of visible emissions from flares, are consistent with those proposed in the Chevron application.

Draft permit OCS-FL-001 should be approved given the maximum allowable emissions shall not exceed the emission rates listed in Tables 1, 2, 3, 4, and 5. These maximum allowable emissions

coupled with compliance demonstrations, monitoring, and reporting will ensure that EPA, MMS, and State of Florida air pollution requirements are met. Through these maximum allowable emissions Chevron has demonstrated that BACT, PSD, NSPS, and NESHAPS do not apply.

Should you wish to discuss these matters in greater detail I can be reached at 214/754-3378.

Sincerely,

11/08/93

Attention: Mr. Scott Davis

Dear Mr. Smith:

As the chairman of an environmentally sensitive program which Chevron has supported, I feel the need to write for endorsement of the permit for their Destin Dome 97 Well. I know Chevron filed for the permit with the EPA under the Clean Air Act and that the well came in well under the regulated emission standards. Congress approved this well in January of 1993 after a two year disagreement with Florida. It seems to me that with Florida consuming 50 times more energy than it produces and with it only producing 2% of its total energy demand, that continued development of natural gas resources is a necessity.

I urge you to issue this permit as soon as possible. Thank you.

Sincerely,

Tammerson Q. Duggan

Tammerson Q. Duggan

RE: PERMIT # OCS-FL-001

Dear Mr. Davis:

The Executive Committee of the Mobile Chamber's Port and Waterways Task Force wishes to formally endorse Chevron's drilling project in the federal OCS southeast of Alabama.

Some of the air emission impacts of the third well to be drilled in the Destin Dome area will be borne solely by Alabama. This is due to the fact that the staging area to support the well will be in our state. Further, we are hopeful that any natural gas found in commercial quantity will be brought ashore in Alabama.

We are satisfied that the air emissions involved are minor, as defined by federal statute.

Therefore, we encourage the project --and are grateful for the favorable economic impact of offshore petroleum operations.

Sincerely,

Andrew A. Saunders, Chairman
Maritime Affairs Division

Attn: Mr. Scott Davis

Dear Mr. Smith;

This letter is to comment on the issuance of an Outer Continental Shelf air permit to Chevron U.S.A. Production Company, Inc. for the purpose of drilling a natural gas well on Destin Dome Block 97. I am a resident of Perdido Key and I formerly worked as a geologist for a major oil company.

As a private citizen, I see no reason why this permit should not be issued. The drilling rig and its attendant supply vessels constitute a minor pollution source according to EPA definition. The Florida Panhandle is not an area with inherent air pollution problems. The drill site is 30 miles south of an open coastline with vigorous air circulation and should have minimal, if any, effects on the Pensacola area.

The proving up and development of natural gas resources could play a vital role in America's energy future. Chevron has diligently complied with the regulations pertaining to the permitting process. Lacking objective criteria for denial of any of these permits it is logical that Chevron be allowed to proceed with the business of creating wealth.

Sincerely,

November 4, 1993

Mr. Winston A. Smith, Director
Air, Pesticides and Toxic Management Division
U.S. EPA, Region IV
345 Courtland Street, NE
Atlanta, GA 30365

Dear Mr. Smith:

I would like to take this opportunity to express my support for the awarding of a minor source emissions permit to Chevron so that company may proceed with development of a natural gas exploratory well in the Destin Dome area off the coast of Escambia County.

While my permanent home is in Tallahassee, Florida, I also own a home on the beach at St. George Island in Franklin County, Florida. As such, I am especially concerned about the preservation and protection of our coastal shores in the northern Gulf of Mexico. Any environmental problems caused by Chevron's offshore drilling would directly affect me and my family economically and aesthetically.

However, after a thorough examination of Chevron's plans -- including data regarding air emissions for the project -- I am convinced that the company is acting reasonably and responsibly, that their plans are sound, and that their project should be allowed to proceed.

Despite the strident claims of the project's opponents -- who, judging from those in attendance at the November 3 public hearing in Pensacola, appear to be largely out-of-town, radical college students who are <u>not</u> representative of me or the majority of Panhandle residents -- Chevron's project will <u>not</u> defile our shores, ruin our view of the horizon, or pollute our air.

What it <u>will</u> do is make our country less dependent on foreign fuel and enhance our reserves of a clean energy source. Though opponents claim that the Destin Dome reserves will only amount to 1 percent of our nation's energy supply, the effort must begin somewhere. It's ludicrous to argue that the Destin Dome reserves may "only" provide enough natural gas to fuel Florida for five years; that is a <u>considerable</u> amount of energy -- and an excellent trade for what I consider to be quite minimal risk.

If every NIMBY ("not-in-my-back-yard") got his way on every issue, our society would quickly grind to a halt. True, government must listen and consider the needs of <u>all</u> its citizens (and I applaud the EPA for its efforts during this "public comment" process), however, by its very charter, our government must consider the needs of the many above the needs of the few --

and particularly the selfish, unrealistic, isolationistic needs of a well-organized special-interest group.

With regard to Chevron's proposal to drill for natural gas off the coast of Pensacola, I offer my complete support and endorsement.

With regard to the specific issue of air emissions, I have carefully read Chevron's scientific statement-of-facts regarding their anticipated emissions from drilling-platform generators and platform-to-shore transport boats, and I firmly believe that their emissions will fall well-within acceptable levels.

(In fact, I would wager that Chevron's emissions on any given day will be considerably less than the emissions given off on November 3 by the caravan of student protesters traveling from universities around Florida to Pensacola for your public hearing.)

I urge the EPA to grant Chevron's permit. If I may provide additional comment or information, please don't hesitate to contact me.

Respectfully,

Rick Oppenheim

Dear Mr. Davis

In regards to Chevron U.S.A. Case for drilling its Destin Dome 97 Well, I find it very persuasive. As you know this project has recieved the strictest scruting at both the state and federal levels.

I strongally feel Florida and the Country need more natural gas the most environmentally friendly of the fossil fuels. We need to make plans now to meet demands for the future. Any more delays would be unwarranded and unfair.

I urge you to issue the required air permits promptly in order for the program to move forward.

yours truly,
Raymond W. McFadden

Attn: Mr. Scott Davis

Dear Mr. Davis:

As Conservation Chairman of the Woman's Club of Tallahassee, and a resident of north Florida, I am particularly interested in energy topics that affect our state. It is my understanding that Chevron has submitted a proposal to the EPA requesting the issuance of an air permit for its Destin Dome project off Florida's coast. I listened with interest this week as Chevron spoke to Florida's legislature regarding this permit. Since it is apparent that Chevron has met all state and federal air rules and regulations, for this reason I urge you to issue the permit as proposed.

Florida's population continues to grow and we must be able to fulfill future energy needs; to me the Destin Dome project seems to be a viable means of achieving these needs. Thank you for your consideration.

Sincerely,

Phyllis Lambrecht

RE: Permit # OCS-FL-001

Dear Mr. Davis:

With regards to Chevron U.S.A. Production Company to initiate gas drilling at it's Destin Dome 97 well, documented research dictates this drilling project will have no harm to the local environment. All evidence presented to date indicates that the drilling operation will meet stringent federal guidelines designed to protect the environment. This includes air quality.

As you are aware this project has required the strictest scrutiny at both the state and federal levels. Any more delays would be unwarranted and unfair.

Therefore, I urge you to issue the required air permit promptly at the conclusion of the public hearings in order for the program to move forward. The nation needs the cleanburning natural gas Chevron hopes to find in the Eastern Gulf of Mexico.

My experience in the Oil industry, Florida, Alabama, and Louisiana Coast are as follows:

1. My family has been a Fuel and Oil JOBBER for a major oil company since 1941. We still provide this service from two docks located in Plaquemines Parish.

2. In the sixties I provided crew-boats which carried workers to rigs and platforms in the Gulf.

3. In 1974 I became involved in Offshore Catering and today I employ over 250 people and service the Oil Industry Gulf Coast from Mobil, Alabama, Louisiana to Galveston, Texas.

Att: Mr. Scott Davis

Dear Mr. Smith:

These comments are in reference to the United States Environmental Protection Agency's proposal to issue an Outer Continental Shelf Air Permit to Chevron U.S.A. Production Company, Inc. for an exploratory offshore natural gas drilling operation located in Destin Dome Block 97.

Midstream Fuel Service, Inc. has very little expertise in the field of air quality or emissions technology. However, this company has total confidence that the reputation, knowledge and experience of the United States Environmental Protection Agency has created a system of regulations for monitoring and reporting necessary criteria to insure air quality. This raises the issue of whether Chevron has the ability or desire to comply with these regulations.

For almost twenty years Midstream Fuel Service, Inc. has observed and participated in many Chevron projects. These projects have included product development, marine vessel operations, retail sales and marketing, towing and affreightment, aeronautical operations, offshore drilling, international sales and marketing, emergency response, refinery operations, community affairs, safety and health training, regulatory compliance and environmental issues. In each of these projects Chevron has demonstrated a commitment not only to meet, but, where possible, to exceed all compliance regulations. Few, if any, companies operate in the United States whose reputation and record of environmental concern match that of Chevron.

The Environmental Protection Agency's skill for establishing pertinent regulations and Chevron's capacity for abiding by those regulations compel Midstream Fuel Service, Inc. to enthusiastically support Permit Application Number OCS-FL-001.

Very truly yours,

John S. McClelland, Jr.

Subject: Written Comments on Chevron U.S.A. Production Company, Inc. Outer Continental Shelf Air Permit - Application Number OCS-FL-001

Dear Mr. Smith:

I am Plant Manager of Monsanto Company's textile and chemical manufacturing plant located in Pensacola, Florida. The plant provides employment for 3000 individuals and is a major supplier of nylon fibers for the carpet industry. We are a major end user of natural gas, and are very supportive of Chevron's efforts to find and develop this clean burning fuel and to make it available to industrial and utility companies.

Our facility, and others like it in Florida, will remain dependent on ample supplies of natural gas for continued operation. Exploration is key to assuring such supplies in the future. We recognize and accept the need for a careful review of the environmental aspects of such endeavors, but do urge that Chevron's Air Permit review for their Destin Dome Project receive priority status.

If we, as an important end user of natural gas in this region, can further contribute to the permitting process, please contact me at (904)968-7108.

Sincerely,

Leon F. Hebert

U. S. Environmental Protection Agency - Region IV
Atlanta, GA 30365 Attn: R. Scott Davis

Dear Sir:

I urge you to issue the required air permit requested by the Chevron Corporation for drilling of an exploratory well in the Eastern Gulf of Mexico named, I believe, Destin Dome 97.

With the nation's precarious dependence on imported oil, the environmental objections of other fossil fuels and the very uncertain potential for synthetic fuels, the need for new sources of clean burning natural gas is most urgent to our country's energy security. This need is especially important in Florida which has practically no energy sources of its own.

I understand that Chevron has already drilled two wells in this area. This one will determine the parameters of the field and, hopefully, confirm the estimates of its great potential. It appears that further delays are not warranted.

Sincerely yours,

Raymond P. Warrell

U.S. Environmental Protection Agency
Region IV
Air, Pesticides and Toxics Management Division
345 Courtland Street, NE
Atlanta, Georgia 30365

Gentlemen:

Please be advised that City Gas Company of Florida strongly urges the US Environmental Protection Agency, Region IV, to issue the proposed Outer Continental Shelf Natural Gas Drilling Operation Air Permit to Chevron USA Production Company, Inc. (Chevron) for Destin Dome Block 97.

City Gas is a local distribution company, serving customers in Dade, Broward, Brevard and St. Lucie Counties, Florida. Natural gas is the nation's most perfect fuel. Using natural gas is environmentally preferable because it emits much less nitrous oxides and carbon dioxide than any other competitive fuel, essentially no sulfur oxides, and no particulates.

To make this clean and environmentally preferred energy available, the exploration and development segment of the natural gas industry must be allowed to drill in the areas where natural gas is likely to be found.

This particular outer continental shelf drilling site proposed is geographically located to be very beneficial to natural gas customers of Florida. Thank you for your consideration of our support of this air permit.

Very truly yours,

CITY GAS COMPANY OF FLORIDA

Jack Langer

Subj: Outer Continental Shelf Air Permit
Draft Permit Number OCS-FL-001
Chevron Offshore Exploratory Drilling
Destin Dome Block 97

1. Affiliation Of Writer To The Permittee: **NONE!** I am a consumer who happens to be interested in energy and the environment. I am a retired physicist, and I consider myself to be a **RATIONAL ENVIRONMENTALIST** with the technical background to gather facts and make rational decisions. To my knowledge I have never had and do not today have even a remote affiliation to the permittee - or any other energy company.

2. This letter is to express my support for finalizing the subject permit without further delay.

3. My support is based on: a) The USA's, and Northwest Florida's increasing population in particular, need for the environmentally friendly energy provided by natural gas. b) The USA's need to reduce, certainly to not unnecessarily increase, foreign imports (specifically oil for fixed power plants). c) Florida needs cost effective clean fuel if it is to continue to accommodate more retirees and tourists, and to attract clean industry - without excessively fouling of its environment. d) The small environmental impact of Chevron's proposed operation as evidenced by data provided in the Technical Evaluation and Preliminary Determination report prepared by Mr. R Scott Davis of the EPA. e) Safeguards specified in the draft permit.

4. I also wish to urge our bureaucrats/civil servants to make every effort to reduce the red tape and time required for action. In October 1991 I wrote a letter in support of the proposed drilling to the Commerce Department - my first ever such letter. Now, two years later, the process is still not complete. Job's patience would be severely tested if he sought Federal and State approvals/permits.

Yours truly,

Bobby G. Craig

ATTN: Mr. Scott Davis

Dear Mr. Davis:

This letter is being written in support of Chevron's permit to drill an exploratory well approximately 30 miles off the northwest coast of Florida in federal waters.

As a Florida Company, clearly, it's in our best interest to support this permit, especially when you consider:

* Florida consumes well over 50 times more energy than it produces;
* natural gas is a clean burning fuel;
* and Chevron has agreed to comply with all the environmental requirements suggested by all environmental agencies involved in the project.

As a Corporate, tax paying citizen of Florida, I urge you to issue the necessary permits for this project.

Yours very truly,

Attn: Mr. Scott Davis

Dear Mr. Smith:

I am a property owner in Destin, FL, my residence being located at 514 Gulf Shore. The purpose of this letter is to show support of Chevron's draft air permit as it is consistent with both federal and state regulations and past agency actions.

As an environmental leader in the offshore industry, Chevron has taken action to minimize air emissions. These limits proposed by Chevron meet all applicable state and federal air regulations. The General and Specific Conditions of the draft permit will assure compliance with all requirements of the State of Florida air regulations.

I am fully convinced the Destin Dome 97 well will be drilled safely in an environmentally sound manner. The state and nation vitally need new sources of this clean fuel of the future. I urge you to approve Chevron's requested air permit.

Sincerely,

J.B.N. Morris

Dear Sir:

Re: Air Emission Permit
Chevron USA Production Co.
Destin Dome 97 Well

The above project has now reached the final stage, which is the actual issuance of the Air Emission Permit, after the public hearing of November 3rd, 1993, and receipt of written comments on the matter, by November 8th, 1993.

We, and our voting friends, therefore recommend prompt issuance of the Air Permit to enable this project to start for the following reasons:

1. Giving Florida and the nation much needed and abundant clean-burning natural gas.

2. Will comply with President Clinton's request of more domestic energy production.

3. Reduction in the nation's debt caused primerally by foreign energy imports.

4. Provide more jobs.

Very truly yours,

RE: DESTIN DOME 97 GAS EXPLORATORY WELL

Dear Mr. Davis:

In reply to Chevron U.S.A. Production Company request to drill a third EXPLORATORY WELL IN THE DESTIN 97 DOME to help evaluate the NATURAL GAS POTENTIAL IN THIS AREA, I am asking your approval.

Mrs. Robert and I would appreciate it, if you would issue this permit, because the State of Florida needs additional Natural Gas Sources to keep with the demand for its use to keep the AIR QUALITY under control.

As you know, several Electric Power Companies are planning to build more Power Plants and are planning to use Natural Gas to fire the Boilers.. Also, the use of Natural Gas isbeing expanded for domestic consumption, replacing fuel oil and other products that damage AIR QUALITY.

The integrity of Chevon U.S.A. would not permit them to take a chance and do things at this operation to harm the AIR QUALITY to get this permit.

Therefore, Mrs. Robert and I ask you to approve and issue the required AIR QUALITY PERMIT so that Chevron can continue their exploration in the hopes of finding an additional source of CLEAN BURNING NATURAL GAS.

Sincerely,

Fernal C. Robert

U.S.Environmental Protection Agency, Region IV
345 Courtland Street, N.E.
Atlanta, Georgia 30365

Dear Mr. Davis:

We believe that Chevron U.S.A. has presented a very good case for the drilling a well 97 on the Destin Dome. All the evidence which has been presented in this case to date indicates that the drilling operations will meet the federal guidelines which are very restrictive and that the environment will be protected. This includes the air quality which will receive a public hearing tomorrow here in Pensacola.

Both state and federal agencies have looked into this matter with a strict eye to seeing that all things were in order. Any further delays will cause undue hardship to not only Chevron but to our country which will have to depend on natural gas one day to a much larger extent than at the present time.

May we have your help in moving this permit forward so Chevron can commence their well which has been too long delayed. Reason justifies this.

Yours truly,

William L. Word

RE: Chevron Outer Continental Shelf Permit

Dear Mr. Smith:

I strongly urge the EPA to approve the above described permit.

Production history from thousands of gas wells in the Gulf of Mexico indicate that offshore production is extremely safe. Proven completion and operating techniques keep accidental discharges to a minimum and even in the worst case scenario the gas can be flared.

Since the gas is moved by pipeline to processing facilities on shore, it's in an enclosed system that has no potential to leak.

Yours truly,

Thomas W. Sylte

TWS:mtm

Dear Mr. Smith:

Clean-burning and efficient natural gas already has established itself as a critical part of Florida's energy future. The citizens of this quickly growing state need the energy security of domestically produced natural gas as fuel for the generation of electricity; commercial and residential air conditioning; natural gas vehicles for mass transit and fleet owners; and industrial, commercial and residential uses.

We urge that EPA favorably consider a Chevron U.S.A. Production Company, Inc., air emissions permit request that would allow Chevron to drill an exploratory well approximately 30 miles off the northwest coast of Florida in United States waters. The drilling of this well is critical for an evaluation of potential development for the area. Eventual production of natural gas from that offshore site would improve the quality of life, and energy security, for the citizens of Florida and the United States.

Sincerely,

E Elliott White

Dear Mr. Davis:

We are writing to you as Floridians in support of your decision to issue an air permit for the Chevron well at Destin Dome.

We realize there are some people who protest this well. They believe there will be serious harm to the quality of life in Florida. But, as your examination indicates, there will be no serious air emissions due to the drilling of this well.

The need for natural gas as a clean burning fuel is necessary in Florida. Not only for residential and commercial consumers, but also for electric utility generation to support Florida's constant growth rate.

It is apparent there are many positive reasons why this project should be completed and we urge your continued support. The drilling of Destin Dome 97 by Chevron U.S.A. is a positive step toward trimming our countries dependence on foreign fuels.

Sincerely,

Mr. & Mrs. D. Scott Pryor

Dear Mr. Davis:

Chevron U.S.A. Production Company has presented a strong case in favor of drilling Destin Dome 97 well. All the evidence indicates that the drilling operation will meet the stringent federal guidelines designed to protect the environment. Of course, air quality is included in this consideration.

As is appropriate, this project has received the strictest scrutiny both at the state and federal levels. Further delay would be unwarranted and, in our estimation, unfair.

Therefore, I urge you to issue the required air permit promptly at the conclusion of the public hearings so that the program may be expedited. The nation and the State of Florida need the clean-burning natural gas Chevron expects to find in the Eastern Gulf of Mexico.

Thank you for being responsive to those needs.

Sincerely,

William M. Hart

Attention: Mr. Scott Davis

Dear Mr. Davis:

I am a Chevron Corporation retiree, President of the Azalea Chapter retirees in Mobile, Alabama. I also serve voluntarily in Chevron's Key Advocate Program.

I have just reveiwed the Chevron exploratory well proposal and draft air permit.
My interest in the,"Destin Dome", area goes back a few years. While working for Chevron in the Mobile area I gained experience in coordinating operations with various agencies and in environmental coordination.

In my judgement, the history of the regulatory process in the Gulf of Mexico region illustrates a classic case of cooperation between governmental agencies and private enterprise. Also, adequate input has been provided by various environmental entities. Such is the case with this Air Permit.

Hundreds of families who are suffering economic deprivation would benefit long-term from oil industry investment in the, "Destin Dome". Adding to the nation's energy resources can provide jobs sorely needed and lessen dependency on imports with their potential for pollution.

It is time to complete the regulatory process and allow drilling of the exploratory well to begin.

Thank you,

Richard J. Lincoln

Atlanta, GA 30365

Attention: Mr. Scott Davis

Dear Mr. Davis:

I have been carefully reading the various arguments concerning Chevron U.S.A. Production Company's plan to drill its Destin Dome 97 well. In spite of the many arguments advanced by various special interest groups, I am convinced that the drilling is in the best interest of all us Florida residents. If there are substantial volumes of natural gas in that area, the State would be a major benefactor. Use of natural gas for electric utility generation for example would contribute greatly to the welfare of all Florida residents and visitors.

Chevron to my knowledge is a responsible, law abiding corporation. I certainly expect them to comply with all federal guidelines and protect all aspects of our environment. I would also expect the EPA to make certain that they do.

Unless you have findings that have not been made public, I urge you to issue the necessary permits so this project can proceed promptly. To do otherwise will cause me to question the integrity and efficiencies of your Agency.

Sincerely yours,

Frederick H. Willman

Re: Permit NO. OCS-FL-001

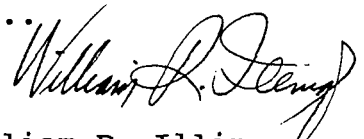
Dear Mr. Davis:

This letter is a request that your office proceed with the issuance of subject permit as soon as possible. It is my understanding that the Environmental Protection Agency, along with the Department of Commerce, indicated an early approval eleven months ago ... back in January, 1993, and that even though procedural processes may have changed since that early date the facts of the case remain the same; thus approval may be granted at this time.

I do believe that both the EPA and Chevron are to be congratulated upon the their obvious dedication to preserve the qualities of good environmental conditions while engaged in a commercial project such as the drilling in the Gulf .... EPA have set fine standards, and Chevron will meet them. The General Conditions, as well as the Specific Conditions, as described in your letter to the Permittee certainly reflect a sincere concern for the public welfare; for this we the public thank you, and I say this as one who uses the beach areas of Florida and Alabama very frequently. I am truly amazed (favorably so) as to the extent of definition that your 'Conditions'reach...they certainly seem to be all-inclusive. So... having met these conditons I do believe that it is appropriate to proceed with an early issuance of the permit. Our country needs this potential energy in our developing need to become an economic force in the world trade markets.

Thank you for your interest and dedication to our mutual welfare. Keep up the good work .... and let's get on to the next job by getting this one behind us.

Sincerely.....



William R. Illing

Mr. Winston A. Smith, Director
Air, Pesticides and Toxic Management Division
U.S. Environmental Protection Agency, Region IV
345 Courtland Street, N.E.
Atlanta, Georgia 30365
Attention: Mr. R. Scott Davis

Dear Mr. Davis:

This letter is in reference to the Chevron U.S.A. Production Company, Inc., Offshore Exploratory Drilling Operation in Destin Dome Block 97, Pensacola, Fl., Air Permit Application Number OCS-FL-001. The comments contained herein, are in addition to those submitted for your consideration in my letter of October 29, 1993.

At this time, Florida consumes over 50 times more energy than it produces. Therefore, Florida is a net importer of energy. Future gas consumption by the State of Florida and the United States will markedly increase due to the increased demand for electric power generation. A significant volume of this natural gas is expected to allow for conversion from fuel oil and coal which will help to reduce the level of emissions onshore by electric power generating facilities.

The natural gas reserves in Destin Dome 97 are thought to be significant and can go a long way to help to meet Florida's and the U.S.A. growing energy demand and safeguard against future energy supply disruptions. The

estimated 1.6 trillion cubic feet of natural gas expected from Destin Dome 97 would be sufficient to supply residential and commercial consumers in Florida natural gas for 29 years.

Chevron has already drilled two wells that were approved by the State of Florida in this Destin Dome area without any detrimental effect to the environment or air quality. Also, as you know, the U.S. Department of Commerce approved this project in January 1993.

As a former chemistry and engineering (technical and sales) middle management employee for 38 years and now a retiree from Chevron U.S.A., it is my experience and strong belief, based on past projects, that Chevron will continue to use the highest standards and conform to all the regulations required for Destin Dome 97. Since this single exploratory well is a natural gas well, any concerns of an oil spill from the well are unfounded.

I further believe that Chevron U.S.A. Production Company has presented a persuasive case for drilling its Destin Dome 97 well. All the evidence that I have reviewed indicates that the drilling operation will meet the stringent federal guidelines designed not only to protect the environment but the air quality as well.

This project, as you are aware, has received the strictest scrutiny at both the state and federal levels. Any more delays, for whatever reason, would be unwarranted and completely unfair.

Therefore, as an interested Florida resident, I urge you to issue the required air permit promptly at the conclusion of the scheduled public hearings in order for the program to move forward. The nation needs the clean burning natural gas Chevron hopes to find in the Eastern Gulf of Mexico now and for the future.

Any replies that you deem warranted in this matter will be appreciated.

Yours very truly

Gentlemen:

Re: Chevron permit application no. OCS-FL-001

As a disinterested party, I have carefully examined the draft air permit proposed for issuance to Chevron U.S.A. Production Company. I have also analyzed Florida air regulations and associated issues. I strongly believe as an environmentalist here in Florida, that this permit should be issued because no substantial environmental resources are put at risk by reason of the air permit.

Adequate safeguards have been placed in the draft permit so that substantial environmental resources will not be at risk. Please promptly issue the permit and avoid additional needless expenditure of valuable governmental resources on this project. Thank you for considering my views.

Sincerely,

John Radey

Re: Draft Air Permit for the DESTIN DOME BLOCK 97 Exploratory Well.

Dear Mr Davis:

Chevron USA Production Company has presented a persuasive case for drilling its Destin Dome 97 well. All evidence presented indicates the drilling operation will meet stringent federal guidelines designed to protect the environment. This includes air quality.

As you know this project has received strictest scrutiny at the state and federal levels. Any further delays are unwarranted and unfair.

The activity will meet federal environmental guidelines plus the even more stringent specifications of Chevron's own Policy 530.

Congress has already abrogated it's responsibility when passing the "SMOKE and MIRROR" 1993/1994 budget. Taxes from the success of this project will help stem the flow of red ink.

Therefore, I urge you to issue the required air permit promptly at the conclusion of the public hearings so that the program can move forward. The nation needs the taxes and the clean-burning natural gas which Chevron's research shows to exist in the Eastern Gulf of Mexico.

Sincerely,

Richard K. Allen

Dear Mr. Davis:

This is to recommend your approval for Chevron USA Production Co. to drill its Destin Dome 97 well. Having reviewed all pertinent material, we feel Chevron has presented a persuasive case for drilling this well. All evidence presented to date indicates Chevron's operation will meet stringent federal and state guidelines designed to protect the environment. This includes air quality.

As boaters, fishermen, and long-time residents of Coastal Florida, we are familiar with the arguments of those who oppose drilling offshore Florida. Also, as veteran oilfield management, we have seen Chevron's operations in several states and in Libya. We are convinced they will conduct a low-key, safe operation that gives every consideration to the environment. They will respect the rights of residents and users of Offshore Florida waters.

You may have heard these facts from others, but-

- *Florida produces only 2% of its energy needs.
- *The State is making maximum effort to import natural gas by way of pipeline facilities from other Gulf Coast states.
- *Gas as the cleanest of all fuels available, contributes nothing to air pollution-maintaining the pristine environmental conditions we Floridians have come to enjoy.
- *The reserves in Destin Dome are thought to be signicant, but that cannot be proved without drilling for it! Energy reserves in the U.S. are being depleted rapidly, and it is entirely possible other energy-producting states would limit our supply in order to protect their own economies.

We urge your prompt approval for Chevron to drill its Destin Dome 97 well. Our own, and future generations of Floridians will be grateful to you for this action.

Sincerely,

Edmund A. & Gloria J. Tanguay

Attention: Mr. R. Scott Davis

Subject: Written Comments on Chevron U.S.A. Production Company, Inc. Outer Continental Shelf Air Permit - Application Number OCS-FL-001.

Dear Mr. Smith:

I represent Polk Power Partners, L.P., an Independent Power Producer and Owner of the 120 megawatt gas fueled electric generation project known as the Mulberry Cogeneration Facility currently under construction in Polk County, Florida. Polk is not affiliated with Chevron U.S.A. Production Company (Chevron). As an end-user of natural gas, I am supportive of Chevron's efforts to find and develop this clean burning fuel and to make it available to electric generators such as ourselves in order to improve the air quality for the citizens of Florida and surrounding states.

After careful review of Chevron's Draft Air Permit by our affiliate, Transok, Houston, Texas, we offer our support on all merits of such Draft Air Permit as being consistent with both federal and state regulations and past EPA actions.

Our facility and others like it in Florida are dependent upon an abundant and accessible supply of clean burning natural gas to create sufficient power for Florida's fast growing populace and replace older, less environmentally efficient power plants.

Dear Mr. Davis:

The purpose of this letter is to express my support of the drilling for natural gas, by Chevron U.S.A. Production Company, of its Destin Dome 97 well off the coast of Florida.

The State of Florida needs more gas as it currently produces approximately 2% of its total energy demand. To insure that ample supplies of natural gas are available in the future, the development of new natural gas prospects is imperative.

The significant natural gas reserves in Destin dome can help to meet Florida's growing energy demand and safeguard against future energy supply disruptions.

Chevron U.S.A. Production Company has presented a persuasive case for drilling its Destin Dome 97 well. All evidence presented indicates that the drilling operation will meet federal environmental guidelines.

I urge you to issue the required air permit at the conclusion of the public hearings. Not only Florida, but the Nation needs the clean-burning natural gas Chevron hopes to find in the Gulf of Mexico.

Sincerely,

Kathryn A. Burns

DEAR MR. DAVIS

I'm at a loss trying to understand environmentalists position on drilling a dry NATURAL GAS well off the coast of FLORIDA. NATURAL GAS is our least polluting fossil fuel. We should be using more in displacing other fossil fuels.

Chevron USA should be allowed to drill the definition well in its Destin Dome 97. It has met all federal guidelines after receiving the closest scrutiny from State & Federal officials.

I believe for the benefit of all of us, you should issue the required permits promptly so Chevron can get on with what they do well.

Attn: Mr. Scott Davis

Dear Mr. Smith,

I am writing to ask that you provide the Chevron Corporation a required air emissions permit so that they can drill an exploratory well approximately 30 miles off the northwest coast of Florida. This well is known as the Destin Dome 97 well.

Florida and the rest of Southeast USA need any gas that can be found. In addition any air pollution resulting from drilling would be no worse than from a large boat passing by. In addition the discovery of commercial deposits of gas would provide tremendous economic stimulus to a poor section of Florida.

Sincerely

Norman D. Coggeshall, Ph.D.

November 4, 1993

Mr. Winston A. Smith, Director
Air, Pesticides and Toxic Management Division
U.S. EPA, Region IV
345 Courtland Street, NE
Atlanta, GA 30365

Dear Mr. Smith:

I would like to take this opportunity to express my support for the awarding of a minor source emissions permit to Chevron so that company may proceed with development of a natural gas exploratory well in the Destin Dome area off the coast of Escambia County.

While my permanent home is in Tallahassee, Florida, I also own a home on the beach at St. George Island in Franklin County, Florida. As such, I am especially concerned about the preservation and protection of our coastal shores in the northern Gulf of Mexico. Any environmental problems caused by Chevron's offshore drilling would directly affect me and my family economically and aesthetically.

However, after a thorough examination of Chevron's plans -- including data regarding air emissions for the project -- I am convinced that the company is acting reasonably and responsibly, that their plans are sound, and that their project should be allowed to proceed.

Despite the strident claims of the project's opponents -- who, judging from those in attendance at the November 3 public hearing in Pensacola, appear to be largely out-of-town, radical college students who are <u>not</u> representative of me or the majority of Panhandle residents -- Chevron's project will <u>not</u> defile our shores, ruin our view of the horizon, or pollute our air.

What it <u>will</u> do is make our country less dependent on foreign fuel and enhance our reserves of a clean energy source. Though opponents claim that the Destin Dome reserves will only amount to 1 percent of our nation's energy supply, the effort must begin somewhere. It's ludicrous to argue that the Destin Dome reserves may "only" provide enough natural gas to fuel Florida for five years; that is a <u>considerable</u> amount of energy -- and an excellent trade for what I consider to be quite minimal risk.

If every NIMBY ("not-in-my-back-yard") got his way on every issue, our society would quickly grind to a halt. True, government must listen and consider the needs of <u>all</u> its citizens (and I applaud the EPA for its efforts during this "public comment" process), however, by its very charter, our government must consider the needs of the many above the needs of the few --

and particularly the selfish, unrealistic, isolationistic needs of a well-organized special-interest group.

With regard to Chevron's proposal to drill for natural gas off the coast of Pensacola, I offer my complete support and endorsement.

With regard to the specific issue of air emissions, I have carefully read Chevron's scientific statement-of-facts regarding their anticipated emissions from drilling-platform generators and platform-to-shore transport boats, and I firmly believe that their emissions will fall well-within acceptable levels.

(In fact, I would wager that Chevron's emissions on any given day will be considerably less than the emissions given off on November 3 by the caravan of student protesters traveling from universities around Florida to Pensacola for your public hearing.)

I urge the EPA to grant Chevron's permit. If I may provide additional comment or information, please don't hesitate to contact me.

Respectfully,

Rick Oppenheim

Attention Mr. R. Scott Davis

SUBJECT: Public comments, Chevron Permit Application, Destin Dome Block 97

Dear Mr. Smith,

Destec Energy Inc. is firmly committed to providing new and clean sources of electric power to both commercial and residential users. We feel that new installations provide numerous societal benefits: improvements in efficiency, reliability and safety can be coupled with creation of jobs and strengthened infrastructure. This is not to say that the environment should be surrendered to the hands of growth, but rather, *controlled* growth is necessary to allow older and less desirable installations to be replaced.

We feel that Chevron's track record reflects a commitment to systematic improvement in their Exploration and Production activities, and, having witnessed their efforts firsthand, we are confident that the agency will find this proposed drilling operation to be one more example of this commitment.

We understand that conservative estimates of emission, including those of supporting marine traffic, indicate that the project has the potential to emit:

CO	90.91 TPY
SO_2	226.63 TPY
NO_x	238.27 TPY

Taking into account both the basis for the above numbers and EPA's proposed mitigations, it is reasonable to expect that the actual emissions will be considerably lower. Further, it is reasonable to speculate that any natural gas that can be made available to Florida and the surrounding region could help to reduce the undesirable emissions from both coal and fuel oil.

P:\PROJECTS\ENVIRON\1008\WASMITH.WPJ

This potential reduction might be viewed as a long-term benefit that might not otherwise be realized.

We certainly appreciate the efforts of both EPA and the Florida DNR and wish to express our thanks for the opportunity to provide comments. As a major user of natural gas, Destec is very interested in supporting efforts to supply a fuel that we consider strategic to improved efficiencies and compliance with the recent Clean Air Act amendment. Therefore, we respectfully request that the EPA go forward with the issuance of the mitigated permit allowing Chevron to construct an exploratory well in the Destin Dome Block 97.

Regards,

Jesse D. Frederick
Manager of Environmental Affairs

Atlanta, GA 30365

Dear Gentlemen:

Please be advised that the Florida Natural Gas Association (FNGA) strongly urges the US Environmental Protection Agency, Region IV to issue the proposed Outer Continental Shelf Natural Gas Drilling Operation Air Permit to Chevron USA Production Company, Inc.(Chevron) for Destin Dome Block 97.

FNGA is made up of members who are responsible for the distribution and transportation of natural gas to serve the people of Florida. Natural gas is the nation's most perfect fuel. Using natural gas is environmentally preferable because it emits much less nitrous oxides and carbon dioxide than any other competitive fuel, essentially no sulfur oxides, and no particulates.

To make this clean and environmentally preferred energy available, the exploration and development segment of the natural gas industry must be allowed to drill in the areas where natural gas is likely to be found.

This particular outer continental shelf drilling site proposed is geographically located to be very beneficial to the customers served in Florida by FNGA's members. Thank you for your consideration of our support of this air permit.

Respectfully,

Wiley M. Cauthen

Dr. Mr. Davis:

Regarding Chevron U.S.A.'s proposed Destin Dome as well. I have reviewed the the inFormation provided by both sides of the issue.

For the past 20 years I have Lived and worked in both Louisiana and Florida. The regulations and rules issued to the oil companies by State and Federal agencies are strictly Followed by the oil companies I have worked For.

Since the proposed well is a natural gas well and Florida currently produces approximately 2% oF it's total energy demand, I urge you to issue the required air permit at the conclusion oF the public heanings. The nation needs the clean burning natural gas Chevron hopes to Find in the Eastern Gulf oF Mexico.

Yours truly,
Vern Lowery

Dear Mr. Davis:

Chevron U.S.A. Production Company has presented a persuasive case for drilling its Destin Dome 97 well. All evidence presented to date indicates that the drilling operation will meet stringent federal guidelines designed to protect the environment. This includes air quality.

As you are aware, this project has received the strictest scrutiny at both the state and federal levels. Any more delays would be unwarranted and unfair.

Therefore, I urge you to issue the required air permit promptly at the conclusion of the public hearings in order for the program to move forward. The Nation needs the clean-burning natural gas Chevron hopes to find in the Eastern Gulf of Mexico.

Sincerely,

Carol C. Bennett

Subject: Permit OCS FL 001

I would like to express my support of Chevron's application for a permit to drill an exploratory well approximately 30 miles off of the northwest coast of Florida in federal waters.

In light of the growing dependence on foreign oil and the push for cleaner fuels I believe it is imperative that we allow, and even encourage, the domestic exploration and development of such a vital resource as natural gas. I firmly believe that Chevron has the ability to perform this work in a safe and environmentally sound manner.

Therefore, I encourage you to approve the draft permit OCS FL 001.

Sincerely,

Guy R. Waski

Mr. Winston A. Smith, Director
Air, Pesticides, and Toxic Management Division
U.S. EPA, Region IV
345 Courtland St., NE
Atlanta, Ga. 30365
Attention: Mr. R. Scott Davis

Dear Mr. Smith:

The National Ocean Industries Association (NOIA) is a national trade association based in Washington, D.C., representing approximately 250 member companies engaged in one or more aspects of exploring for and producing the vitally needed oil and natural gas resources of the nation's Outer Continental Shelf.

It is NOIA's opinion that the draft air permit [permit number OCS-FL-001] crafted for Chevron to drill an exploratory well in block 97 offshore Florida is consistent with state and federal laws and regulations in addition to past agency actions, and we urge EPA to grant the permit.

As Chevron has indicated in its application, emissions from this project would be less than 250 tons per year, which defines a minor pollution source. Using the high end of its projections, Chevron estimates carbon monoxide output to be 90.91 tons, sulfur dioxide to be 226.63 tons, and nitrogen oxides to be 238.27 tons. These projections include emissions from the rig itself and from crew and supply boats servicing the rig, and actual emissions are expected to be lower than these levels.

In addition, Chevron has proposed utilization of engine retardation to reduce nitrogen oxide emissions from the rig engines, will provide certification of sulfur content for the diesel consumed by the rig and the vessels supporting the drilling operation and will limit the number of trips made by the vessels to the drill site.

Due to the distance, type and quantity of emissions, the air quality effect on the Gulf of Mexico and the Florida coast is minimal, and no negative impact on wildlife or wildlife areas is expected.

The successful conclusion of this project - eventual production of natural gas - would benefit Floridians and the entire U.S. While the government has a stated goal of increasing the use of

natural gas in the U.S., we are producing at almost full capacity. In addition, the Energy Information Administration predicts a 26 percent increase in natural gas imports by the end of next year just to meet existing demand. It is imperative that the Outer Continental Shelf be opened to exploration and production of new reserves of oil and natural gas to meet our energy needs.

While offshore exploration and production accounts for less than two percent of the oil spilled in the world's oceans, this prospect is dry natural gas, which can't spill. The potential environmental impact on Florida from this project is negligible.

For these reasons, we respectfully urge that Chevron be granted this permit to continue its Destin Dome project.

Sincerely,

Robert B. Stewart

Dear Mr. Davis:

Chevron's Destin Dome well will not cause significant air pollution, which, of course, is the reason you intend to issue an air permit for the project.

Those who oppose your issuing the permit will, no doubt, claim to the contrary -- and dredge up prejudices and half-truths and non-truths about the environmental impacts of drilling a well some 30 miles out in the Gulf of Mexico.

They certainly won't mention that the project supports our President's hopes to improve air quality in the U.S. The President has said that by increasing our use of natural gas, we would have more jobs, income and security in the world. He has talked about how the use of natural gas would improve air quality in the country. He also wants to reverse the trend toward rising oil imports by encouraging conservation and greater reliance on domestic natural gas supplies. The Destin Dome project could help us reach all these aspirations of the President.

Please hold firm in your decision to issue the air permit for Chevron's Destin Dome well in the Gulf. Thank you for your kind attention.

Sincerely,

Janet T. Dennis

Dear Mr. Davis:

Our local newspaper, the *Tallahassee Democrat* wrote an editorial the other day and asked readers to write to you about the Chevron air permit to drill offshore Pensacola. I strongly disagree with the newspaper's thoughts on this and hope you will quickly approve the Chevron air permit.

It's my understanding the company has supplied your office with emissions data and these projections indicate limited releases meeting all applicable state and federal regulations. If this is true your decision should be to quickly grant this permit and not waste any more energy on this.

President Clinton has spoken of the need for cleaner air and the increased use of natural gas. He's also spoken of our need to reduce foreign imports of oil. The Destin Dome project could help us reach these goals.

While special interest groups will have organized opposition at the public hearing, and I believe these people are well meaning, I hope you will only weigh the facts on this permit and support a conclusion that this permit should be granted.

Sincerely,

David R. Mica

Dear Sirs,

The following comments are addressed to Chevron, Block 97, OCS Air Permit OCS-FL-001.

1) The Sierra Club opposes development and production of the oil resources of the Outer Continental Shelf from which oil cannot be extracted and transported to market without danger of substantial environmental damage resulting. We further comment regularly on OCS drilling and production rules and on the permits for drilling and production.

2) OCS-FL-001 is identified as a Minor Source Permit and I cannot find a requirement in Title 40 Part 55 and Part 124 that a public hearing or public comments have any substantive or regulatory part in its issuance. You further state that this project falls within Minor Source requirements and that this document is an Intent to Issue.

3) If the rules are not followed in this case for whatever public request reasons they will be equally open to requests for public review by the Permit holder in case of denial and in the case (s) of the seven Mobil Permits which are now in Department of Commerce Consistency Appeal. These are regulatory processes which we review on an equal basis with other governmental agencies and industry and this is too important to drilling in the Eastern Gulf, while the Draft General Permit is being written, to confuse it without very clearly and specifically stating your rules and intent.

4) There are no Nonattainment Areas (NAA) within the Nearest Onshore Area (NOA) or Corresponding Onshore Area (COA); this Permit falls within the EPA jurisdiction of Floridas 9 miles plus 25 mile limit and this is true for all of Chevrons leases and unitized blocks in this area of the Gulf.

5) OCS-FL-001 is well within the limits for issuance as a Minor Source Permit and I think both Chevron and EPA have done a good job in preparing and reviewing this permit.

Sincerely,

Richard D. Radford

Gentlemen:

The Avanti Company and its officers support issuing a permit to Chevron to drill on the outer continental shelf in Destin Dome Block 97.

The use of Natural Gas in Flroida is good for its environment and its quality of life due to less obnoxious emmissions.

The benefits to us all in Flroida will be great. Thank you for your consideration.

Respectfully,

Paul Devlin
President

Justine Devlin
Vice President

COMMENTS TO THE U.S. ENVIRONMENTAL PROTECTION AGENCY
IN THE MATTER OF
CHEVRON U.S.A. PRODUCTION COMPANY, INC.
OUTER CONTINENTAL SHELF PERMIT (OCS-FL-001)
November 3, 1993 Public Hearing

My name is Kennard F. Kosky and my business address is 1034 NW 57th Street, Gainesville, Florida. I am President of KBN Engineering and Applied Sciences, Inc. and prepared the Outer Continental Shelf (OCS) permit application on behalf of Chevron U.S.A Production Company, Inc. I am a registered professional engineer in Florida and have been working for more than 23 years, primarily in Florida, on air quality related activities. My comments today will focus on the draft permit application, the proposed OCS source as a source of air pollution, the maximum impacts of the proposed activity on air quality in Florida, and the significance of the expected natural gas reserve to air quality.

Proposed Draft Permit

The draft permit and conditions proposed by the U.S. Environmental Protection Agency (EPA) are consistent with those of similar sources located in Florida. I have been involved in several hundred permits during my career and the conditions in the permit are consistent with permits issued to sources with similar emissions. Under Florida regulations, the proposed OCS source would be considered a "minor source" and would have similar permit terms and conditions. I support the EPA's proposed permit.

Proposed OCS Source

The activities and emissions proposed for the OCS source are, from an air pollution standpoint, relatively minor. As I mentioned previously, under Florida's regulations, the activity would be considered a minor source if it were located onshore. When compared to onshore activities, the emissions from the proposed OCS source are relatively small. I have prepared a few charts that present some relevant comparisons. Figures 1 and 2 present the estimated emissions of nitrogen oxides and sulfur oxides for Florida, Escambia County (the county in which we are meeting), and the proposed OCS source. As shown, the emissions from the OCS source are very small compared to the state-wide and county-wide emissions. The reason for the very small emissions

relative to other onshore sources is a result of the amount of fuel used during the course of the proposed permit.

Air Quality Impacts

KBN performed an air quality impact analysis for the proposed OCS source. The analysis used EPA-approved models and determined impacts to onshore areas including National Parks and National Wilderness Areas (i.e., Class I Areas). A portion of our modeling results are presented as Figures 3 and 4 for nitrogen dioxide (annual average) and sulfur dioxide (24-hour average), respectively. These figures present the applicable federal and state regulatory standards including those promulgated to protect public health and welfare [ambient air quality standards (AAQS)], and those that protect air quality from significant deterioration [prevention of significant deterioration (PSD)]. The percentage of the AAQS was used as the basis for these figures. As shown, the maximum impacts from the proposed OCS source are substantially below all federal and Florida air quality limitations and even below the significant impact levels. In fact, the impacts from the OCS source could not be measured at any on-shore location even using the latest state-of-the-art monitoring equipment.

Natural Gas Reserves

The expected natural gas reserve in the Destin Dome area can have significant consequences from an air pollution standpoint. As indicated by representatives of Chevron, about 1.6 trillion cubic feet of natural gas is expected in the Destin Dome. This amount of natural gas, which is the cleanest of fossil fuels, is significant when compared to that used in Florida. Figure 5 shows a comparison of this reserve to total natural gas used in Florida and by electric utilities in Florida. If this natural gas were made available, it could displace other fossil fuels such as residual oil and coal used in electric generation. Figures 6 and 7 present the reductions in SO_2, NO_x and CO_2 emissions that this projected natural gas could displace if it were made available. Compared to residual oil, the expected natural gas reserve would produce about 1 million tons less emissions of SO_2 and NO_x; CO_2 emissions would be 27 million tons less. When compared to coal, the air pollution benefits of natural gas are even greater (see Figure 7).

Summary

In summary, EPA's proposed draft permit is consistent with other permits in Florida for minor sources. The OCS source by itself is relatively small and the air quality impacts would be immeasurable onshore. Significant benefits to reduce air pollution would be expected with the production of the potential gas reserve.

Atlanta, GA 30365

Dear Mr Tobin,

Your name and address were in an Editorial in the NEWS-PRESS of Fort Myers,Florida this week.

I would urge you to take whatever environmental action is needed to clear the way to ALLOW for offshore drilling and production of oil and/or natural gas in the waters offshore Florida.

The over 50 year history of offshore drilling and production of oil and natural gas in the Gulf Of Mexico off the coasts of Texas and Louisana has certainly established sound environmental industry practices.

If sufficient natural gas production could be established offshore Florida and shipped via pipeline to Florida Power & Lights plants it could replace the extremely dangerous shipments of oil via barge to these plants. These barge shipments are an environmental disaster waiting to happen.

Sincerely,

Allen R. Ratti

Attention: Mr. Scott Davis

Re: Outer Continental Shelf Air Permit
Permit Application No. OCS-FL-001
Chevron U.S.A. Production Company, Inc.

Dear Mr. Smith:

Yesterday I had the opportunity to attend both sessions of the public hearing in Pensacola regarding the Chevron OCS Air Permit. I feel the EPA Panel did an excellent job of maintaining order and direction in the face of rudeness and diatribe from a multitude of the protesters present. It appears that the only thing some of the protesters have less respect for than other people is the truth.

In my opinion Chevron has done an excellent job of preparing and presenting its position and has complied with all federal, state and agency requirements. I hope that Chevron's permit will be issued without further delay.

Sincerely,

Dorion Fleming, Jr.

re: Permit OCS-FL-001
Destin Dome Block 97
Offshore Florida

Dear Mr. Davis:

I am writing to urge EPA to approve the above referenced permit requested by Chevron U.S.A.

I am an independent geologist, not affiliated with Chevron in any manner. I attended both public hearings held by EPA on November 3, in Pensacola. My observations and comments follow:

(1 I did not hear one logical or scientific reason why Chevron should be denied this permit.

(2 By operating their minor point source under your permit, Chevron will be required to comply with all applicable state and Federal laws and regulations.

(3 All arguments I heard against granting this permit boiled down to one thing: Not In My Backyard. While this might be an effective political argument, this is beyond EPA's scope of responsibility.

I thank you for your consideration of my remarks. I also would like to commend the EPA personnel who held the Pensacola hearings. I believe they conducted themselves with dignity and restraint in a difficult and contentious situation.

Yours truly,

Mark A. Stephens

Atlanta, GA 30365

Nov. 4, 1993

Dear Sirs:

This is in reference to Chevron pending permit OCS-FL-001. Thank you for sending representatives to Pensacola to hear the public. I am aware of the emotional nature of that public meeting because I was present and I, too am very emotional about preservation of my beautiful beaches.

The current records of Chevron are not very encouraging in their protection and care of our beaches. I understand you are looking at different aspects concerning this issue, but I am compelled to still ask that you include the wants of the public who live here and must deal with the presence of the desired exploratory drill. As you heard over and over again yesterday, and as you can see by the overwhelming mail you have received from us, we do not want this drill or any other drill in our waters.

In looking over the "Draft" you provided us I find some discrepancies that should be examined. On page 1 "This permit will authorize the

construction and operation of one exploratory natural gas drilling rig." ... "Proposed activities include the drilling of the well, to be performed utilizing a jackup type drilling rig, testing of the hydrocarbon formation (if determined to exist) and suspension of the well." On page 7 #6 a "after achieving the maximum production rate at which the OCS will be operated, ..." The discrepancy of exploratory drilling rig and maximum production rate is very definite. Therefore, #2 on page 2 would apply to denial of the permit since Chevron's intentions are clearly not just exploration with a one rig.

Please allow us to make the decision about what is best for our waters, beaches, lives, and our future. You don't live here and won't have to deal with the possible disaster that would and could destroy our beaches, waters and livelihood. Remember the agency you work for "Environmental Protection Agency." Protect the Environment for us all here in Pensacola, FL and for all the tourists who come here (some because they can't use their beaches because of offshore drilling) to enjoy our beautiful beaches. Thank you.

Sincerely,
Audrey Farage

November 8, 1993

Mr. Scott Davis
U.S. EPA Region IV
345 Courtland Street, N. E.
Atlanta, Georgia 30365

Dear Mr. Davis:

This letter is in response to the Chevron OCS Air permit application, Destin Dome Block 97.

The Gulf of Mexico is essentially a closed system, where pollution and trash are recirculated. The health of the Gulf, upon which our local economy almost entirely depends, has declined in recent years, caused in part by the growing demand upon its resources, and in part by the neglect of its environment. The barrier islands, estuaries, salt marshes, wetlands, and sea grasses, form an intricate set of ecosystems which support a multitude of life. These ecosystems must be protected from the cumulative effects of routine pollution and dumping, chronic leaks and spills, and air pollution that accompanies offshore drilling, as well as the threat of a catastrophic accident. These perceived threats are not unrealistic, since Chevron's safety record is not unblemished. Last year alone, Chevron pled guilty to 65 violations of the Clean Water Act for illegal discharges of drilling wastes on its oil and gas rigs.

In the near decade since the Environmental Impact Statement for the oil and gas drilling in the Eastern Gulf of Mexico was written, there have been many changes and additional impacts on the Gulf environment. The adequacy and applicability of a 1984 EIS are questionable. The efficacy of an EIS is generally considered to be 5-7 years whereas this document was completed 10 years ago. The changes to the environment through area development and use have been substantial in the intervening years. Natural resources have become more scarce as habitats have been reduced or lost, water quality has been diminished, and natural communities have been unable to sustain themselves as a result of general environmental degradation. Some resources, once plentiful, are now threatened and any degree of impact is unacceptable. An impact analyses performed in 1982 is now outdated and should be revisited based on the currently existing environment.

Post-it™ brand fax transmittal memo 7671 | # of pages ▸ 2

To Scott Davis	From Enid Sisk:n
Co. EPA	Co. GCED
Dept.	Phone # 9345449
Fax # 404 3473057	Fax # 404 932-1047

In addition to the environmental changes over the preceding 10 years, much new scientific data and ecological understanding has been acquired. Environmental assessments must be based on the best available data thus this new information needs to be incorporated in the impact analysis. The vast technological and data collection improvements have allowed an understanding of the environmental relationships and functioning of ecosystems that was unavailable when the current EIS was completed.

Unfortunately, our research of the Gulf ecosystem has not kept pace, and we cannot at this point accurately assess the potential damage gas drilling could do, let alone depend on a document written over ten years ago. A 1990 National Research Council study of three similar drilling proposals, found the existing environmental, oceanographic, and socioeconomic data inadequate for a determination of no significant impact.

For these reasons I urge you to deny Chevron's request for an Air Permit, at least until we are sure there will be no irreparable damage to our environment.

Sincerely,

Enid Sisskin

re: ocs-fl-0001
Chevron OCS air permit application

Dear EPA:

As a taxpaying, concerned citizen I am adamantly against allowing permits for the construction of oil or gas rigs in our beautiful but delicate eco-system area.

It does not make logical sense that these rigs could be built in our area without damaging our beaches, shores & air.

I lived in Houston, TX for many years and well recall how the air pollution began first as a slight haze in the far, far distance as viewed from a high rise office building, to increase to a yukky haze right up close. The beaches there were not fit for swimming.

It all begins with one rig.....then another & another until all those 'minor emmissions' and perhaps a few accidents have ruined a uniquely beautiful area.

As stated at last night's hearing, the company management may fully intend to regulate emmissions - then again, according to their record of problems and fines concerning rig sites, I wonder. Perhaps management may THIS time intend to be sure they stay within guidelines, but the day to day reality at rig sites is that pollution is not constantly monitored & controlled.

If Chevron has not been successful at controlling pollution from existing sites, why should we expect they can at this one?
I insist that their record be considered for this decision and that only after they have PROVED they can manage current rigs without pollution incidents should this request be considered.

Of course, I realize, and hope you do, that there's more pollution resulting from the operations of these rigs than just the monitored situations.

I pray that THIS TIME the people's will for their area be considered over the desires of business.

Please do not allow this permit! Please do not allow rigs of any kind in our Florida Gulf Coast waters.

Respectfully submitted,

Marie Falgin

P.S. Would be very interested in results of your decision

EXHIBIT C15

p. 9

Please think of the happiness of children for a change.

What is better?

A legacy of happy children ~~swimming~~ swimming in clear blue ocean waters off Florida for many generations to come,

OR

Children upset + crying because they can no longer swim or play with other children in clear blue ocean waters off Florida ——— but instead dead fish, dead birds on the beach with oil-slicks on the ocean + beaches.

Please think of the happiness of children.

Thank you.

Sincerely, Rita Manley

(Rita Manley)

p.8

Why can't adults think of the happiness of children for a change?

— The total oil/gas reserves off the coast of Florida would only supply the USA consumers with oil/gas for approx 4-5 days.

— Yet - only one oil/gas spill in the Gulf of Mexico could destroy the happiness of children forever.

— Why can't the adults save the Gulf of Mexico off Florida for a legacy of happy children for many generations of children to enjoy the simple joy of swimming + playing in clear blue ocean waters,

P.7

Yet only one oil/gas spill in the Gulf of Mexico could destroy the happiness of children forever.

"Children laughing, playing, splashing in clear blue ocean waters as their eyes sparkle with joy and swim with other children in clear blue waters off Florida's coast.

Every year children have so much fun with their parents and other children laughing and playing and swimming in clear blue Florida's Gulf of Mexico.

Yet—only one spill would destroy children's happiness forever.

P. 6

In the above 5 pages concerning the effect of air emission pollution from oil/gas rigs; I have only mentioned how it can increase global warming and destroy crops by the increase of soil and air temperature in the USA and worldwide.

If the oil/gas companies like Chevron are allowed to drill off the coast of Florida in the Gulf of Mexico —— it will destroy the beautiful clear blue ocean waters for children forever,

There are so many children from all over the United States that swim, play, surf in the clear blue ocean waters off Florida every year. —— Yet only one oil/gas spill could destroy the ocean for

pages

3. The World Health Organization is concerned as well as scientists around the world, because — as temperatures in the soil, and ambient air temperatures increase — the crops will dry-up and there will be a critical loss of crops that survive the growing season. This lack of crops harvested can cause an increase of famine and starving in all countries — even the United States. — Reference:

Science: May 22, 1992
p. 1138 — p. 1141. Volume 256
Authors - Anne Simon Moffat
Richard Kerr

(Science is published by AAAS — american association for advancement of science)

Gas rigs emit methane which contribute to the greenhouse effect. The increase of these greenhouse gases into the atmosphere causes a bigger hole ~~that~~ in the ozone layer in the atmosphere.

Scientists predict that if the hole in the ozone layer in the atmosphere continues to increase,

(1.) the world-wide temperatures will increase. This includes the temperature of the soil in which seeds are planted for crops. (2.) If world-wide temperatures in soil increase - many crops will dry up and increase famine worldwide.

p.3

"Gas rigs operated by Chevron emit methane gas — is a global warming gas at least 20 times more potent than CO_2. Even minute amounts of leakage 1% or more offset any gains made from burning less oil and coal. The intergovernmental panel on Climate Change a UN sponsored body, has calculated that at least 60% reductions in CO_2 emissions by the year 2000 are necessary to stabalize current levels of this greenhouse gas in the atmosphere. Natural gas production could seriously thwart those goals."

↑ The above paragraph was quoted from Greenpeace researchers in the Scientific field.

The Federal Clean Air Act passed in Nov. 1990 in Congress has specific limits on NO_2, SO_2, H_2S air pollution emissions because these air pollution emissions contribute to acid rain which increases eutrophication of lakes.

Gas and Oil rigs from Chevron emit H_2S, SO_2, NO_2 and benzene into the atmosphere.

NO_2 and SO_2 contribute to the increase of acid rain which destroys lakes by eutrophication.

Greenhouse gas emissions like CO_2 increase the hole in the ozone layer of the atmosphere.

p.1

Rita Manley
PO Box 3683
Pensacola, Fl 32516
November 4, 1993

Heinz Mueller
Environmental Policy Section
EPA - Region IV
345 Courtland Street, NE.
Atlanta, Georgia 30365

Mr. Mueller,

This letter is concerning the OCS Air Permit for air emissions from Chevron's oil/gas rig off the coast of Northwest Florida.

Gas rigs emit SO_2, NO_2, H_2S routinely into the atmosphere. The Clean Air Act which was updated and passed on Nov. 1990 has limits for these air pollution emissions.

Gas rigs also emit methane which is 20 times more potent a destructive greenhouse gas.

p.6

Why can't adults think of the happiness of children for a change?

Children's eyes light up with joy as they swim, play and splash in clear blue waters off Florida's coast every year.

Yet only one oil/gas spill could destroy the children's happiness forever. Children crying and upset because they can no longer play with other children + families in clear blue ocean waters off Florida's coast because now dead fish, birds oil slicks and garbage has destroyed their beaches forever.

Please think of children! Sincerely, Rita Manley

p.5

Also, SO_2, NO_2, H_2S which are air pollution emissions from any oil/gas rig increases acid rain production.

Acid rain causes eutrophication or the "death" of lakes which are used by the public for fishing and recreation.

But most of all, it is time for adults to think of the happiness of children for a change.

So many children from all over Florida and the United States have good, clean fun with their parents swimming in clean blue ocean waters off Florida's coast every year.

The gases which contribute to the greenhouse effect are CO_2 and chlorofluorocarbons. Methane emitted from oil/gas rigs is 20 times more destructive to the ozone layer than CO_2.

A reference to back-up what I described concerning scientists concerned with increases in soil temp. and air temp. can cause massive crop failure — dryed-up crops is from — Science — May 22, 1992 issue: see article on greenhouse effect and crop failure.

published by American Assoc. for Advancement of Science

If the greenhouse effect continues to destroy the ozone layer in the atmosphere — scientists are concerned that the increase in soil temperature and air ambient temperature will dry up any crops planted. There will be less rain for crops with an increase in air ambient temperature. When soil temperature increases the seeds planted will dry up due to less moisture in the soil and higher soil temperatures.

This will cause crop failures for farmers in the USA and overseas and increase worldwide starvation and famine.

p.2

Chevron's oil/gas rig emits methane which is 20 times more harmful greenhouse gas than CO_2.

If the air pollution emissions like methane, from oil/gas rigs continue in the Gulf of Mexico — it increases the hole in the ozone layer — which increases global warming.

Scientists and Scientists from the World Health Organization are concerned that if the hole in the ozone continues to increase — worldwide temperatures of soil and ambient air temperatures will increase — causing massive crop failures in the USA.

Nov. 5, 1993

Heinz Mueller, Chief
EPA, Region IV
345 Courtland Street, NE
Atlanta, Georgia 30365

Mr. Mueller,

This letter is concerning the OCS air emission permit submitted by Chevron oil/gas for drilling for oil/gas off Pensacola, Florida and Destin, Florida in the Gulf of Mexico.

p.1/

Every summer, children's eyes light up with happiness as they swim, splash play with other children in Florida's clear blue ocean waters.

Yet — only one oil or gas spill could destroy the clear blue ocean waters for children in Florida — forever.

Why can't adults leave children a legacy for many generations of happy children playing, swimming in clear blue ocean waters with their families for many years to come?

OR

Otherwise children will be crying and upset because of dead fish, dead birds, oil slicks and garbage all over the ocean + beaches — so now they can no longer play with other children on the beach or swim in clear blue ocean waters.

Thank you. Sincerely, Kita Manley

p.6 So if a local fisherman sells his catch of fish or oysters with a high concentration of lead or mercury to a local McDonalds, Hardees, or Burger King or restaurant — if a child eats a fish sandwich with high concentrations of lead or mercury — that child could have permanent brain damage.

Children's blood system and blood-brain barrier is not developed like adults — so lead passes easier into their brains and can cause neurotoxic symptoms like brain damage, seizures.

— Please consider the happiness of children for a change. Children from all over the United States visit Florida's clear blue ocean waters and play and swim with other children every year.

P.S

Chevron oil/gas rigs also emit SO_2, NO_2 and H_2S which contribute to an increase in acid rain. Acid ~~rain~~ rain causes eutrophication of lakes which destroys lakes otherwise used for fishing or recreation.

Although this letter is commenting on the air pollution emissions from Chevron's oil/gas rig off Pensacola and Destin, Florida — the oil/gas rig also causes pollution of the Gulf of Mexico.

Each oil/gas rig emits 2,000 tons of drilling muds which contain lead, and mercury. When fish, oysters swim around the oil/gas rig — they concentrate the lead and mercury in their tissues. Lead and mercury are severe neurotoxins.

The World Health Organization and other scientists are concerned if the hole in the ozone layer in the atmosphere gets any larger — this will cause a significant increase of both ~~soil~~ soil and ambient air temperatures worldwide. This means farmers who plant large crops here in the United States and overseas — will be faced with a large amount of crops failing to be harvested because they will dry up. When the soil temperature is too high, the seeds will not produce healthy crops. When the ambient air temperature is too high, there is a lack of moisture and rain, so crops will fail also due to lack of rain.

This can increase famine and starvation of people in the United States.

Natural gas, which is 90% methane is a global warming gas at least 20 times more potent than CO_2.

Scientists from around the world have stated that if global greenhouse effect continues, and the hole in the ozone layer gets any larger — there is a significant danger of an increase of soil and ambient air temperature worldwide.

If the soil and ambient air temperature increases — this can cause any seeds planted for crops — to dry up and a large percentage of crops to fail to be harvested.

(continued next page)

The Federal Clean Air Act of Nov. 1990 has set limits on air pollution emissions from oil/gas rigs for H_2S, SO_2, NO_2. If the oil/gas companies are not in compliance with State of Florida air pollution emission standards within 180 days, each oil/gas rig will be fined $25,000/day according to the Federal Clean Air Act of Nov. 1990.

Since it is impossible for the Chevron oil/gas rigs to be in compliance within 180 days for State of Florida standards for air pollution emission standards for SO_2, NO_2, H_2S —— the oil/gas rigs will be fined $25,000 a day according to the penalties set by the Federal Clean Air Act of Nov. 1990.

Re: Ofshore Drilling at Pensacola Beach

Dear Mr. Davis,

I would like to submit these questions and statements to be a part of the permanent record of the Public Hearing period regarding Chevron Oil Company's air permit for offshore drilling at Pensacola Beach, Florida.

First, I would like to know why the E.P.A. has not considered the "flair" and natural gas leakages in studying the effects of air emissions during drilling? Why is it you are only concerned with the numbers of trips made by vessels and not the most important concern of all, the gas leakages from the site? Have you considered our atmospheric humidity?

Secondly, how do you plan to enforce the rules of the permit? Since Chevron is an admitted violator of permits, why are you "permitted" to trust them? What can you do to deny them the permit based on their past record?

Third, is there going to be a "water permit"? If not, why not? Would there be a public hearing period?

As an "Environmental Protection" agency, why are you satisfied with "accceptable" or "minimal" levels of pollutants (subjective terms) when there is an alternative source of renewable, infinite energy that lessens our dependancy and that has ZERO pollutants? (Solar) Why have you not made it well know that Sacramento, California is actually utilizing their first solar powered electric charging station for electric city vehicles and busses? Why is their proposed electric automobile manufacturing plant not common knowledge and being encouraged by your agency in places such as Florida, where the sunshine is abundant and free? Why is it not known outside of Sacramento, California that rates for electricity will actually be reduced when the full plan is implemented and that utility rates have not increased thus far?

After attending the Public Hearing Nov. 3, 1993, I am sure you noted 400 people in attendance in addition to thousands of signatures, a letter from the Governor and a Congressman,

all of whom are against offshore drilling for scientific and emotional reasons. As any kind of offshore drilling affects our tourism and fishing industry as well as our delicate, cherished ecosystem of which we all are a part, why are not the public opinions given more concern and consequences? I have volunteered in a local environmental group where I have seen, and can assure you that the Pensacola area has hundreds of local business and thousands of local citizen petitions and resolutions asking that offshore drilling not be permitted. The Pensacola area is small but united.

I believe that emotional reasons are valid as well as scientific ones and would like to express my personal view. I grew up as a military dependant and have seen the beaches of the Mediterranean, Mexico, California, the Carribean and Alaska. There are none like the beaches we enjoy here with the white (as the driven snow) sand, solitude, colors, species and cleanliness. Burned in my memory is the first time I laid eyes on Pensacola Beach at Fort Pickens over two years ago. As I rode to the shore on my bike and saw the illuminated sea greens and blues I promptly laid my bike down to walk directly into the 70° water . . . fully clothed. Standing waste deep I could see schools of fish, and the clear sandy bottom. I couldn't believe a place like this existed in the United States and vowed that if it were ever possible, I would make this area my home. And I did. Since moving here in August of 1993, I never tire of walking the beach 4 to 5 times per week. It is more often than not that I see 3 or 4 dolphins playing, great blue heron flying, and a new variety of species I had never known before in the surf at my feet. This could not be happening if our waters become polluted. I see handfulls of tourists smiling and children creative in the sand and laughing in the water each time. I see lovers stroll, people in peaceful solitude, and families at play.

The community takes pride in its shores and plans annual beach "clean-up" day where numerous businesses and organizations care for a section. We don't even allow our children to play with the sea-oats. This regard for nature is being practiced here, not just talked about. Children are learning to care for and appreciate their planet first hand.

To even think of allowing an outside, greedy, corporation to risk our home is painful enough to bring tears. It will create daily fear into our lives. We share this planet with those making their home in the seas, it's not our place to jeopardize their homes and lives. We are all one. Please, don't allow this country to lose a national treasure.

Sincerely,

Barbara Mohon

Pensacola News Journal

Recently, there have been letters in your newspaper purporting to tell "the truth" about the effects of oil and gas drilling. The problem is [illegible] "the truth" of what [illegible] will be because it has not been adequately studied.

The Gulf of Mexico is essentially a closed [illegible] pollution and trash are [illegible]. The health of the Gulf, upon which our local economy almost [illegible], has declined in recent [illegible] in part by the growing [illegible] resources and in part by the neglect of its environment.

The barrier islands, estuaries, salt marshes, wetlands and sea grasses form an [illegible] of ecosystems which support a multitude of life. These ecosystems must be protected from the [illegible] effects of routine pollution [illegible], chronic leaks and spills [illegible] that accompanies [illegible], as well as the threat of a catastrophic accident.

These perceived threats are not unrealistic, since Chevron's safety record is not unblemished. Last year alone Chevron pleaded guilty to 65 violations of the Clean Water Act for illegal discharges of drilling wastes on its oil and gas rigs.

What the governor, most of our congressional delegation and local groups are requesting is a moratorium on drilling until its effects can be studied in relation to other existing impacts in the Gulf. The secretary of Interior can impose this moratorium if he is made aware that there is support for it.

— Enid Sinclair, Ph.D.

near "The Dock" - Pensacola Beach, Florida

The dark patches are schools of fish.

Dear Mr. Davis,

Please share this foto of the waters at Pensacola Beach with your staff and include it in your report.

If Cheuron begins drilling, I will be glad to furnish you with pictures of trash, debris and "muck". Your agency will be held directly responsible.

Please help to insure that photographs like this may continue to be enjoyed by tourists and local families, now and 100 years from now.

Please find a way to stop this permit now and forever.

Sincerely,

Barbara Mahon

Atlanta, Georgia 30365

Dear Sirs,

On November 4, 1993, I attended the public hearing regarding offshore drilling held at the Saenger theater in Pensacola. I appreciated the opportunity to become more informed of the issues and process involving Chevron's quest to obtain the necessary permits.

As a member of the Audubon Society, The Nature Conservancy, and as a registered nurse and citizen concerned about the world I live in and leave for my children, I am adamantly opposed to any drilling off the shores of Florida.

I recognize that this process has progressed to the point that the air quality permit is the last hurdle before Chevron has all it needs to begin drilling. I implore you to deny this permit. Since the issue of air quality is the main item to be addressed I will first direct my questions and comments toward that.

Air is not just something we breathe. It is also the medium through which we experience the world around us. How many of you would go on a vacation to a nice sunny beach so you could take pictures of the offshore rigs glistening in the sunset? How many of you would like to go for a moonlight stroll to the sounds and sights of bells and alarms and blaring lights coming from the rigs?

Why would any flare be allowed? If the goal is to make the most of the resource why aren't the drilling companies required to have a means of recovering the gases currently burned off as flare? How many millions of gallons or cubic feet of fuel are wasted this way per rig per year? What is the dollar value?

I understand that this permitting process has been going on for approximately 10 years. How much taxpayer money has been spent on this permitting for just the Destin Dome? How much has Chevron spent in trying to get the permits? How many square feet of housing and business buildings could be made more energy efficient if this same amount of money were used to replace inadequate windows doors and insulation? How much energy, both in amount of fuel (gallons or cubic feet) and dollars, would be conserved if this were done? Why isn't the EPA promoting conservation and alternative energy research more aggressively?

Much was said at this hearing about and acceptable level of risk to the environment to benefit the national good. I fail to

understand why there isn't zero tolerance for environmental destruction. It seems to me that the government in general and the EPA in particular have gone out of their way to assure that destruction continues. This permitting process is a perfect example. You have compartmentalized each potentially polluting process involved with oil/gas drilling. Air, water, land all dealt with individually as if that little piece alone were the only problem. So an acceptable level of pollution is set for each one. But who looks at the total level at the end? And we are talking just one test well. What will you do if they find a significant amount of oil/gas? Permit each well individually and say well that one well isn't producing that much pollution? What about the cumulative effect of 500 or 1,000 or 10,000 wells?

Have you walked the beaches of Galvaston, Texas? Have you seen the condition of the water in the marshes and estuaries surrounding the area? The sheen of oil is all over. Have you seen all the rigs sprouted up around Fort Morgan, Alabama. Talk about an eyesore!

In contrast, have you walked the beaches in the Florida panhandle? Why do you want to risk turning these beaches into another Galvaston area? I fail to see how increasing the profits for the petrochemical companies is a greater national interest than the preservation of these areas.

And once all the oil or gas is extracted, what happens to the wells? And what about the geological instability that comes about after millions and millions of gallons of material are removed from deep in the earth? Who pays for any problems that develop as a result of that?

As a nation we proclaim to have zero tolerance for drug abuse. We claim to be a peaceful nation that abhors the use of weapons of mass destruction. Why are we so ready to befoul or own back yard to destroy our remaining beautiful and unspoiled natural areas. To make or nation and our planet less hospitable to all species including ourselves.

It is time for the EPA to live up to its name...**ENVIRONMENTAL PROTECTION** Agency. From what I have seen the best that can be said for the agency is that in some cases it may slow the destruction but it certainly does not protect the environment. It is in the national interest to protect completely our remaining unspoiled areas.

Sincerely,

Lois J. Case

Draft OCS AIR PERMIT No. OCS-FL-001

First, I would like to thank you for holding the public hearing in Pensacola on November 3. Hearing the arguments and reading the written summaries you made available were very helpful to me. The extent of the technical and legal procedural details can be overwhelming.

The complexity also has the effect of compartmenting the main issue into many minor ones, to be resolved piecemeal. This produces a bias toward approval. Your summary of the permitting action shows how "correct" actions by many officials on limited issues over an eleven year period converged on the wrong overall decision.

At this eleventh hour, we must decide only whether the air pollution from one temporary exploratory well would conform to some narrow technical rules. We are constrained by law and/or regulation from considering future impacts of production wells in the Destin Dome area. This is a glaring example of the bias of compartmentation. Approval to explore is logically tantamount to approval to produce whatever is found. Why else would you approve exploration? It follows logically, if not legally, that the true adverse impacts of the decision about this permit are those of the production field. EPA should at least voice a strong reservation about this illogical constraint on its mission of protecting the environment. At the very least, the statement submitted to the hearing by Chevron must not go unchallenged on this point. That statement compared the supposed benefits of extracting 2-3 trillion cubic feet of natural gas to the minor adverse impacts of the single exploratory well. Please tell them that they cannot have it both ways!

Several people asserted that air pollution from the well, or wells, would not be very significant because of the location 29 miles offshore. That is not true. Typical weather for most of the year includes strong breezes blowing toward shore in the afternoons. This is driven by differential warming and rising of the air over the land. It usually concludes with thunderstorms and scattered heavy rains around the Pensacola area. Offshore source pollution would be systematically moved ashore and precipitated daily by this weather pattern. The proper standard for evaluating air pollution offshore would be the same as if it occurred ashore. It is not clear from your summary whether this treatment is required by applicable regulations.

I do not completely understand the effect on this permit issue of the new Pollution Discharge Elimination System (NPDES) rules and the supplemental EIS. Is this project being evaluated against standards that are less restrictive than those to be used in the future? If that is the case, then action should be deferred until the new rules for the eastern Gulf of Mexico are in place. The path to exploitation of the waters of the Florida Panhandle has taken over ten years, but it can wait a few more months until a proper decision process is in place.

As I understand its intent, the Coastal Zone Management Act was to permit the states to impose a higher standard of protection for its coast than the Federal rules might provide. The decision of the Commerce Secretary on the consistency appeal was perverse in that it used that law to assert the supremacy of offshore oil and gas exploitation over the State's interest in preserving its coastal environment. The State has spoken clearly the will of its citizens. The Governor and Sen. Mack reiterated this position at your hearing. USEPA must use the Clean Air Act, the Water Quality Act, and any other Federal law it administers to do its mission. Protect the environment.

I propose a valid test for the impacts of offshore oil and gas exploitation that does not require expensive data collection. Simply go to the Alabama State Park at Ft. Morgan, where offshore platforms are visible. Then travel about 60 miles west to visit Ft. Pickens in the National Seashore park off Pensacola, where the wells have not reached. Compare the environments by sight. Some impacts do not require chemical analysis.

Sincerely,

Edmond G. Case

REFERENCE: Public Comment - OCS-FL-001 Chevron Destin Dome Block 97

I wish to have the following comments entered relative to the air permitting issues of this exploratory rig.

The Draft Permit has no requirements for emission monitoring of the rig's well testing flare; only minor compliance monitoring of machinery with well established emission characteristics is addressed. The flare's expected emissions are less well known, otherwise it would not be called a well testing flare. This flare should have some compliance monitoring instrumentation, protocol or other appropriate means of assuring compliance, and it should be spelled out in this permit. Specifically, since the flare is by far the largest expected source of SO2, it should be monitored in some way for compliance with appropriate provisions of the Clean Air Act.

The flare emission quantities obtained above should be made available to the public for consideration when Chevron asks for production well permitting.

TABLE 3 does not address heavy metal emissions from the flare. There should be entries for the possible toxic elements with expected amounts, such as "None" or "Trace" or "Below detectable threshold" or "X quantity."

Table 5 - TOTAL OCS SOURCE EMISSIONS provides for a Sulfuric Acid Mist emission quantity of 2.31 tons. No source is attributed in TABLE 1, 2, 3, or 4. Are there other point sources on the rig? Is that from incompletely burned H2S? Is there no H2SO4 from the flare?

I request the Agency deny this incompletely prepared permit application, and send responses to the above address.

Respectively submitted,

S. M. Guild, Jr.

EPA Air Permit
Destin Dome Block 97

Dear Mr. Smith:

Please accept this letter as Chevron's final comments with regard to the Air Permit for the Destin Dome Block 97 exploratory well. In my estimation, the preparation and filing of our original application in May of 1993 to the date of the public hearing on November 3, 1993 has allowed for ample input from the citizens of the United States and Florida. I have a great deal of respect for the regulatory process. If the natural gas resources which Chevron expects to find are allowed to eventually be produced, the net effect of the emissions from the drilling of this well will have only a positive effect on the air quality of the United States. This is supported by the comments I filed into the record at the public hearing as well as the numerous comments of others that supported this project.

As you are aware and was pointed out to the general public who attended the hearing in Pensacola, this Air Permit is only a small portion of the safeguards which governmental agencies are required to implement to allow a company like Chevron to drill a well in the federal waters of the United States. Since November 1982 to the present day, the public has been informed on numerous occasions by Notices in the Federal Register, public hearings, proceedings before the Department of Commerce, and now finally, this Air Permit, of the federal government's intentions to allow exploration of oil and gas reserves in federal waters off the state of Florida. The public has had an opportunity to participate on numerous occasions and the federal and state actions have assured and concluded that the activities proposed by Chevron involving drilling off the coast of Florida are not likely to result in environmental degradation to the federal waters, state waters, air quality or species off the coast of Florida.

The Air Permit is sound, based on science and will afford protection to all citizens of the United States as well as Florida from any substantial degradation to air quality. From the filing of the application in May, Chevron has provided substantial information to assure that the emissions from the project are below amounts necessary to classify this project as a minor source. Other agencies, such as Minerals Management Service, the U.S. Fish and Wildlife Service, the National Park Service and the state of Florida, have been involved and consulted in the process of preparing this permit. It is now time to go forward, issue the permit effective immediately and allow the activity to take place.

There has been some discussion with your staff concerning the regulations and how they apply to the effective date of the permit when issued. [40 CFR 124.15, Issuance and Effective Date of Permit succinctly states when a permit will be become effective.]

(b) **A final permit decision (or a decision to deny a permit for the active life of a RCRA hazardous waste management facility or unit under § 270.29) shall become effective 30 days after the service of notice of the decision unless: ...**

(3) **No comments requested a change in the draft permit, in which case the permit shall become effective immediately upon issuance.**

Chevron would like to point out that this language and the process thus far emphatically support for the issuance of a permit effective immediately. While Chevron has not attempted to review the written comments that have been submitted into the Record, to this date, we have attended the public hearing and if it is any indication of what is contained in the written comments, there have been no requests for any changes in the draft permit conditions. Secondly, Chevron would like to point out that the draft permit as noticed states that the permit would become effective on signing and should therefore be issued effective immediately. Lastly, issuance with an immediate effective date would conform to the manner in which permits are issued currently in Florida. I would like to point out that in the state of Florida, once the permitting process has run its course, as it has here, the permit issues effective immediately.

In summary, based on the regulatory requirements for an immediate effective date, the exhaustive record on this project in general, as well as the specific permit process for this Air Permit, I would urge the U.S. Environmental Protection Agency to issue this permit expeditiously and effective immediately.

Sincerely,

H. J. Colligan /alw

IN REPLY REFER TO:

September 21, 1993

Mr. Brian L. Beals, Chief
Source Evaluation Unit
Air Enforcement Branch
Air, Pesticides, and Toxics
Management Division
U.S. Environmental Protection Agency
345 Courtland Street, N.E.
Atlanta, Georgia 30365

Dear Mr. Beals:

This is in regard to the Environmental Protection Agency's (EPA) administration of the permit program for air pollution sources on the Outer Continental Shelf (OCS) in the Eastern Gulf of Mexico (GOM), and responsibilities under the Endangered Species Act. We have enclosed a coordination/consultation flow diagram to assist you in determining EPA's requirements in the endangered species interagency cooperation process. This process can be summarized as follows.

Section 7(a)(2) of the Endangered Species Act of 1973 (Act), as amended, requires federal agencies to ensure that their actions do not jeopardize the continued existence of listed species or destroy or adversely modify critical habitat. The federal agency responsible for authorizing, funding, or implementing an action is required to determine whether listed species, proposed species, critical habitat, or proposed critical habitat may be present in the area that would be influenced by that action. If such species or habitat may be present, the federal agency is required to determine whether the action may affect such species or habitat. To make such a determination, the following information should be considered and summarized in a biological information report:

1. The results of an on-site inspection of the areas affected by the action.

2. The views of recognized experts on the species at issue.

3. A review of the literature and other information.

4. An analysis of the effects of the action on the species and habitat, including consideration for the cumulative effects, and the results of any related studies.

5. An analysis of alternative actions considered by the federal agency for the proposed action.

If a determination is made that listed species or critical habitat may be affected, the federal agency must request, in writing, formal consultation with the Fish and Wildlife Service. If the proposed action is likely to jeopardize the continued existence of proposed species or result in the destruction or adverse modification of proposed critical habitat, the federal agency must confer with the Fish and Wildlife Service.

Consultation may be informal if the proposed action can be implemented in a way that is not likely to adversely affect listed species or critical habitat. Coordination with the Service to explore this possibility, prior to a consultation request, is encouraged.

If the federal agency determines that no listed species, proposed species, critical habitats or proposed critical habitats occur in the area of project influence, the project is not likely to adversely affect such species or habitats, or there would be no effect on such species or habitats, this office requests the opportunity to review the information on which such a determination is based, and to concur with that determination.

Section 7(d) of the Act underscores the requirement that the federal agency and permit or license applicant shall not make any irreversible or irretrievable commitment of resources during the consultation period which, in effect, would deny the formulation or implementation of reasonable alternatives regarding their actions on listed species.

To assist you in the determination process, we have enclosed a list of species that could potentially be affected by actions permitted under the subject program. The EPA could consult with the Service for the entire program in the eastern GOM, or could consult on individual permits. We are available to assist you in deciding which consultation process best fulfills EPA's responsibilities under the Act for the program. The EPA should also coordinate with the National Marine Fisheries Service regarding federally listed species under their jurisdiction.

Please contact Ms. Lorna Patrick of this office regarding this matter.

Sincerely,

Gail A. Carmody
Project Leader

Jupiter, Florida 33477

Dear Drs. Newman and Gettleson:

Thank you for your letters of October 28 and 29, 1993, regarding potential air quality impacts from Chevron U.S.A. activities, Destin Dome block 97 in the Gulf of Mexico on federally listed, proposed, and candidate species (FWS Log No. 4-P-94-007). This response is provided in accordance with Section 7 of the Endangered Species Act of 1973, as amended (Act) (16 U.S.C. 1531 et seq.).

Chevron U.S.A. proposes to conduct natural gas exploratory activities in outer continental shelf (OCS) waters of the Gulf of Mexico approximately 30 statute miles south-southwest of Pensacola, Florida. The Fish and Wildlife Service (Service) completed Section 7 consultation with the Minerals Management Service for OCS oil and gas lease sale 116 (letter dated June 22, 1987). This letter addresses concerns raised regarding air emissions not previously evaluated.

Based on an air quality risk analysis, it has been determined that the subject action will not likely affect any of the identified species (Table 1). The analysis indicated that the species do not occur in the air emission area of potential influence, or the predicted levels of emissions are well below levels reported to affect plants and animals.

The species list used in the subject analysis is one that the Service provided to the U.S. Environmental Protection Agency (EPA) regarding activities permitted under the agency's air emissions program for the Eastern Gulf of Mexico and responsibilities under the Act, dated September 21, 1993. According to information provided in the analysis, the primary effects to animals from air pollution can be either direct effects, from inhalation of pollutants or ingestion of food or water contaminated by air pollutants, or indirect effects, from

damage or injury to essential habitat components. Such effects are the result of acute exposure and are localized to within several miles of an emissions source. Primary pollutants such as sulphur dioxide can also have effects on plants. Injury to vegetation from secondary air pollutants, such as acid deposition and ozone can occur at greater distances.

This risk analysis was conducted by evaluating two factors: the exposure potential of the species to the predicted air emissions, and the sensitivity of those species that have the potential to be exposed. It was concluded that some of the listed species have no exposure potential because they are either geographically or ecologically isolated from contact with air pollutants. For the proposed facility, the farthest distance of measurable air emissions based on modeling results is estimated to be 200 miles. Thus, species found only in South Florida were considered to have no exposure. Species that are considered ecologically isolated (in habitats that would be unaffected by the air emissions, i.e., Gulf sturgeon; or that use affected habitats for a minimal amount during their life cycle, i.e., sea turtles surfacing for air in the aquatic environment) were also considered to have no exposure.

For those species that were considered to be potentially exposed, air quality modeling was conducted to determine maximum air pollutant concentrations at several locations, including Breton and St. Marks National Wildlife Refuges, and at the nearest shoreline. The pollutants modeled consisted of particulates, sulfur dioxide, nitrogen dioxide, carbon monoxide, and lead. The results were compared to the lowest observed effect levels for plants and animals.

The results showed that the predicted concentrations of the modeled pollutants are well below the lowest level observed effect levels for plants and animals. Therefore, it was concluded that air emissions from the proposed activity would not adversely affect any of the identified species.

The Service has reviewed the air quality risk assessment results and conclusions and finds it sufficient and adequate to support a determination of "not likely to adversely affect" for the exploratory activity as proposed. Therefore, we concur with the finding.

Although this does not represent a Biological Opinion as described in section 7 of the Act, it does fulfill the requirements of the Act. If modifications are made in the activity or additional information becomes available on listed species, reinitiation of this assessment may be required.

We appreciate your efforts in coordinating this assessment for the subject activity with us in a cooperative manner to expedite the process. Please contact Lorna Patrick of this office for additional information or coordination.

Sincerely,

Gail A. Carmody

Attn: Mr. R. Scott Davis

RE: Response to Public Notice and Request for Extension of Public Comment Period for Chevron OCS Exploratory Drilling Permit, Destin Dome Block 97

Dear Mr. Davis:

The Environmental Defense Center (EDC) is a non-profit public interest environmental law firm active in air quality issues in the south-central coast region of California. Our region has suffered adverse air quality impacts from OCS activities for many years, and recently succeeded in securing amendment to the Clean Air Act to provide EPA and local jurisdictions the authority to regulate OCS emissions of air pollution, codified as § 328 of the 1990 Clean Air Act Amendments. EDC was plaintiff in a legal action against EPA to obtain the promulgation of regulations under § 328 for the administrative control of these emissions. EDC v. EPA, C.D. Cal., No. 92-2708 WDK. EDC thus has an intimate interest in OCS air permits.

To our knowledge, this is the first air permit issued under those regulations. Although the source is not located in southern California, we are well acquainted with the methods and practices of the applicant and with Chevron's institutional response to regulatory programs. We believe that this permit is of national significance, and desire the opportunity to fully participate and want to ensure that local communities are provided with the appropriate technical and legal information about this permit and process.

With this in mind, we must request that the comment period for this item be extended. We are of course disappointed that EPA was unable to notify us of this application and that the notice was not published nationally. Please place EDC on your mailing list for future OCS permit notices. In the instant case it is impossible for this office to respond to the application in a substantive manner and to advise local community groups who have expressed an interest in the issue under the November 8 deadline. We request that the public comment period be held open for an additional 30 to 60 days.

This extension is particularly appropriate in light of 40 C.F.R. Part 124's requirement that all issues be raised at the administrative level. This is an extremely complicated matter that requires substantial technical as well as legal review. These regulations are being applied virtually for the first time, creating a number of issues of first impression that cannot be resolved by relying upon previous actions. The distance between the record and this office adds difficulty and time to the process of obtaining the necessary documents.

I trust EPA recognizes the significance of these issues and of this permit. There are few issues that are as important to an on-shore community as the air quality impacts of OCS development, and thus we ask that EPA allow the interested and affected public to voice its concerns in a thorough and meaningful manner.

Sincerely,

Marc Chytilo
Chief Counsel
Environmental Defense Center

RE: Chevron OCS Exploratory Drilling Permit, Destin Dome Block 97

Dear Mr. Smith:

The Environmental Defense Center (EDC) is a non-profit public interest environmental law firm active in air quality issues in the south-central coast region of California. Our region has suffered adverse air quality impacts from OCS activities for many years, and recently succeeded in securing amendment to the Clean Air Act to provide EPA and local jurisdictions the authority to regulate OCS emissions of air pollution, codified as ¶ 328 of the 1990 Clean Air Act Amendments. EDC was plaintiff in a legal action against EPA to obtain the promulgation of regulations under ¶ 328 for the administrative control of these emissions. EDC v. EPA, C.D. Cal., No. 92-2708 WDK. EDC thus has an intimate interest in OCS air permits.

We have had an opportunity to give cursory review to the permit here at issue at the request of Florida environmental activists. In response to EDC's request for extension of the comment period, Acting Regional Administrator Tobin extended the deadline for EDC's comments to this date. Please accept these comments on behalf of EDC and the Florida Public Interest Research Group (FLoridaPIRG).

We have identified as number of areas of concern, many of which are heightened by the failure of the permit applicant to trigger Prevention of Significant Deterioration (PSD) and/or New Source Review (NSR) review and the imposition of best available control technology (BACT) and emissions offsets. We believe that EPA must look behind the estimates of emissions provided by the applicant and recognize the considerable margin of error in the estimates provided, recognize additional vessel and other

appurtenant emissions and find that the source has the potential to emit greater than 250 tpy of NOx and/or VOC. Further, EDC believes that the application submitted is inadequate for EPA to make a reasoned judgment as to likely air quality impacts. The Corresponding On-shore Area (COA) stands at the brink of violating the ozone ambient air quality standard\1 and thus PSD review is essential to avoid pushing the COA into nonattainment status. It is our opinion that the source is a "major" sources, that PSD and/or NSR review is necessary, BACT should be applied, offsets should be required, and further public involvement is appropriate before a permit is given further positive consideration.

1. CHEVRON'S EMISSIONS WILL LIKELY EXCEED 250 TONS PER YEAR AND SHOULD NOT BE CONSIDERED A MINOR SOURCE

The applicant is obviously attempting to avoid environmental compliance requirements and protection of environmental quality by manipulating the project description to fall just below the 250 TPY threshold for treatment as a major source. As noted below, many of the applicant's emissions figures are estimates and/or have been recalculated to demonstrate emissions below the major source threshold. Employment of this loophole will result in significant impacts to air quality and other affected resources, adversely affecting the public interest.

2. THE AFFECTED ENVIRONMENT MANDATES THAT THE PROJECT BE CONSIDERED A MAJOR SOURCE

A. <u>The COA is not defined</u>

According to EPA staff, the state of Florida is the COA for this project. (Scott Davis, November 30, 1993) The application states that the COA is in attainment for all criteria pollutant, however the state of Florida is a nonattainment area. Further, the counties or other regions which are likely to be most directly affected by the source's emissions are nonattainment areas, or are close to qualifying for nonattainment designation.

B. <u>Include all aspects of all emissions sources in the source's inventory</u>

The applicant has excluded pertinent emissions from vessels servicing the rig, as described in Chevron's supplemental application of June 24, 1993. Congress clearly desired that all emissions associated with an OCS source be considered a part of that source. The applicant proposes to use a port 70 miles from the source, and originally included the emissions associated with

---

1. We understand that the COA has two exceedences of the ozone ambient air quality standards in the past two years. Should there be further exceedences, it will be evident that EPA and the State have failed to adequately protect local air quality.

this choice of port. The assumptions integral to the amended application severely limit the emissions and adversely affect air quality.

Further, the small degree which the source's emissions are below the stated 250 TPY threshold requires that EPA employ a worst case analysis to accommodate the uncertainties associated with the use of emissions factors, estimates, and the absence of continuous emissions monitoring data.

It is mysterious that the vessel emissions could be reduced so drastically in the amended application, by a factor of ten.

C. Require BACT and other requirements

Protection of on-shore air quality requires the imposition of BACT, offsets and other mitigation measures designed to reduce the significance of air pollution impacts. BACT requires the use of natural gas rather than diesel fuel. Offsets will allow the reduction of emissions elsewhere and more definitely protect on-shore air quality.

Simple retardation of ignition timing is not BACT and should be required for all diesel engines as a matter of course. The relevant emissions may be best reduced through employment of natural gas fired engines, which constitute BACT for this source.

D. The baseline emissions inventory must assume unregulated emissions

The applicant has avoided major source definition and thereby escaped BACT and offset requirements by voluntarily imposing a lesser level of emissions controls. This practice contravenes the intent of Congress and encourages the type of gerrymandering employed by the applicant in this case. The practice should not be condoned.

3. PUBLIC INVOLVEMENT HAS BEEN UNSATISFACTORY

Chevron's application has been a moving target which frustrates meaningful public involvement. Substantive aspects of the project have changed, critical data has been submitted late, and it appears that the applicant has undertaken a coordinated effort to limit public involvement and environmental review of the project. EPA has a duty to take additional steps to involve the interested and affected public in this decisionmaking process.

4. NEPA REVIEW ISSUES

It is not clear from the record how EPA has satisfied the mandates of the National Environmental Policy Act. Attempts to obtain clarity on this issue from technical staff were not

successful and counsel was unavailable to answer questions at the time this letter was drafted.

Clearly this is a major federal action significantly affecting the quality of the human environment, in that the federal authorization qualifies as a federal action, the impacts from this project include both air quality as well as adverse effects to the benthic and marine resources, aesthetics, as well as impacts from the ultimate production and consumption of product, if marketable quantities are discovered. Cumulative impacts in each of these issue areas will be significant when considered with foreseeable similar and related projects, existing projects, and other sources of impacts in the area.

In conclusion, FloridaPIRG and EDC do not believe that it is appropriate to issue this permit at this time and under the immediate circumstances. The source should be considered the major source that it is, and compliance with NEPA and other federal environmental statutes must be demonstrated. This project has grave ramifications for the entire region, and must be given more careful scrutiny and provide air quality benefits to ameliorate the significant adverse effects.

Sincerely,

Marc Chytilo
