---

**Barbara** – I have signed the attached document for the referenced permit package. Please clerk and issue.

**Jeff** – Wheelabrator North Broward requested the installation of an activated carbon injection system for the control of mercury emissions. A similar project was done at the South Broward facility in 2009. The permit modifies certain conditions of the previously issued PSD permit as it relates to testing frequency, emission limits and delisting Be as a regulated pollutant. The applicant reviewed the pre-draft AC permit and had no comments. The AC modification is on a 14-day public comment period while the Draft/Proposed Title V revision is on a 30-day public comment period.

Thanks,  
Syed
