Purpose of Application

Air Operation Permit Application

This Application for Air Permit is submitted to obtain: (Check one)

[ ] Initial Title V air operation permit for an existing facility which is classified as a Title V source.

[ ]Initial Title V air operation permit for a facility which, upon start up of one or more newly constructed or modified emissions units addressed in this application, would become classified as a Title V source.

Current construction permit number: _____

[ ]Title V air operation permit revision to address one or more newly constructed or modified emissions units addressed in this application.

Current construction permit number:_____

Operation permit number to be revised:___ _____

[ ] Title V air operation permit revision or administrative correction to address one or more proposed new or modified emissions units and to be processed concurrently with the air construction permit application. (Also check Air Construction Permit Application below.)

Operation permit number to be revised/corrected:_____

[**X**] Title V air operation permit revision for reasons other than construction or modification of an emissions unit. Give reason for the revision; e.g., to comply with a new applicable requirement or to request approval of an "Early Reductions" proposal.

Operation permit number to be revised: **0250003-002-AV** _____

Reason for revision:___**TITLE V PERMIT RENEWAL**_____

Air Construction Permit Application

This Application for Air Permit is submitted to obtain: (Check one)

[ ] Air construction permit to construct or modify one or more emissions units.

[ ] Air construction permit to make federally enforceable an assumed restriction on the potential emissions of one or more existing, permitted emissions units.

[ ] Air construction permit for one or more existing, but unpermitted, emissions units.

4. Owner/Authorized Representative or Responsible Official Statement:

I, the undersigned, am the owner or authorized representative(check here [ ], if so) or the responsible official (check here [X], if so) of the Title V source addressed in this application, whichever is applicable. I hereby certify, based on information and belief formed after reasonable inquiry, that the statements made in this application are true, accurate and complete and that, to the best of my knowledge, any estimates of emissions reported in this application are based upon reasonable techniques for calculating emissions. The air pollutant emissions units and air pollution control equipment described in this application will be operated and maintained so as to comply with all applicable standards for control of air pollutant emissions found in the statutes of the State of Florida and rules of the Department of Environmental Protection and revisions thereof. I understand that a permit, if granted by the Department, cannot be transferred without authorization from the Department, and I will promptly notify the Department upon sale or legal transfer of any permitted emissions unit.*

4. Professional Engineer Statement:

I, the undersigned, hereby certify, except as particularly noted herein, that:*

(1) To the best of my knowledge, there is reasonable assurance that the air pollutant emissions unit(s) and the air pollution control equipment described in this Application for Air Permit, when properly operated and maintained, will comply with all applicable standards for control of air pollutant emissions found in the Florida Statutes and rules of the Department of Environmental Protection; and

(2) To the best of my knowledge, any emission estimates reported or relied on in this application are true, accurate, and complete and are either based upon reasonable techniques available for calculating emissions or, for emission estimates of hazardous air pollutants not regulated for an emissions unit addressed in this application, based solely upon the materials, information and calculations submitted with this application.

If the purpose of this application is to obtain a Title V source air operation permit (check here [X], if so), I further certify that each emissions unit described in this Application for Air Permit, when properly operated and maintained, will comply with the applicable requirements identified in this application to which the unit is subject, except those emissions units for which a compliance schedule is submitted with this application.

If the purpose of this application is to obtain an air construction permit for one or more proposed new or modified emissions units (check here [ ], if so), I further certify that the engineering features of each such emissions unit described in this application have been designed or examined by me or individuals under my direct supervision and found to be in conformity with sound engineering principles applicable to the control of emissions of the air pollutants characterized in this application.

If the purpose of this application is to obtain an initial air operation permit or operation permit revision for one or more newly constructed or modified emissions units (check here [ ], if so), I further certify that, with the exception of any changes detailed as part of this application, each such emissions unit has been constructed or modified in substantial accordance with the information given in the corresponding application for air construction permit and with all provisions contained in such permit.

Application Comment

Emissions unit 005 is the existing (4) 2.5 MW Diesel Emergency Generators Electra-Motive [GM] Model 20-645-E4 that are referred to by facility personnel as units 3A, 3B, 4A & 4B. The generators supply backup power to the nuclear plant auxiliary equipment. These units fire low sulfur [0.5%] diesel fuel. Units 3A & 3B commenced operation in November, 1972, while units 4A & 4B commenced operation in 1991.

Emissions unit 006 consists of five other emergency diesel generators used for the plant's security system, waste water treatment, and meteorological assessment. These generators also fire low sulfur [0.5%] diesel fuel.

Emissions unit 007 consists of the following miscellaneous diesel plant equipment:

[3] Service Air Compressor Diesel Engines

[2] Instrument Air Compressor Diesel Engines
[1] Standby steam generator feed pump diesel engine
[1] Service Water Diesel Pump

Emissions unit 008 consists of miscellaneous unregulated plant equipment & vents & activities: see Attachment PTN-8.

PRECAUTIONS TO PREVENT EMISSIONS OF UNCONFINED PARTICULATE MATTER

Attachment PTNFS_4
Precautions to Prevent Emissions of Unconfined Particulate Matter

The facility has negligible amounts of unconfined particulate matter as a result of the operation of the facility. Potential examples of particulate matter include:

- fugitive dust from unpaved roads
- sandblasting abrasive material from plant maintenance activities
- fugitive particulates from the use of bagged chemical products

Several precautions were taken to prevent emissions of particulate matter in the *original design* of the facility. These include:

- Paving of roads, parking areas and equipment yards

- Landscaping and planting of vegetation

Operational measures are undertaken at the facility which also minimize particulate emissions, in accordance with 62-296.310 F.A.C.:

- Use of thick poly flaps over the doorways to prevent any sandblasting material from leaving the sandblast facility. The facility also constructs temporary sandblasting enclosures when necessary, in order to perform sandblasting on fixed plant equipment.

- Maintenance of paved areas as needed

- Regular mowing of grass and care of vegetation

- Limiting access to plant property by unnecessary vehicles.

- Bagged chemical products are stored in weather-tight buildings until they are used. Spills of powdered chemical products are cleaned up as soon as practicable.

- Vehicles are restricted to slow speeds on the plant site

FUGITIVE EMISSIONS IDENTIFICATION

Attachment PTNFS_5
Fugitive Emission Identification

Criteria and Precursor Air Pollutants

Fugitive particulate emissions are addressed in Attachment PTNFS_4.DOC. FPL is not aware of fugitive emissions of sulfur dioxide, nitrogen oxides, carbon monoxide or lead compounds which would exceed the reporting thresholds defined in the permit application instructions.

Fugitive HAPs Emissions

FPL is not aware of fugitive emissions of HAP pollutants which would exceed the reporting thresholds defined in the permit application instructions.

PROPOSED INSIGNIFICANT ACTIVITIES

Attachment PTNFS-8

List of Insignificant Activities

Attachment PTNFS-8

Following are several pages of insignificant activities at the facility. The activities identified in this application are provided for information only and are identified as examples of, but not limited to, the activities previously identified. It is understood that such activities do not have to be included in the with Title V Application. The activities identified herein are consistent, in terms of amounts of emissions and types, with those activities listed in Rule 62-210.300(3)(a) and (b).

Pursuant to Rule 62-210.300(3), notice is herein provided that the emissions units listed in rule 62-210.300(3)(a) F.A.C. and listed with this attachment are not subject to a permit issued by the Department of Environmental Protection and are exempt from permitting until a final determination is made under the Title V permitting requirements (Rule 62-213 F.A.C.). These units would not have triggered review under Rules 62-212.400 or 62-212.500 or any new source performance standard listed in Rule 62-204.800 F.A.C..

The facility is authorized under the current Title V permit to have categorical exemptions as listed in rule 62-210.300(3)(a).

LIST OF EQUIPMENT/ACTIVITIES REGULATED UNDER TITLE VI

Attachment PTNFS_9
Equipment / Activities Regulated Under Title VI

The following equipment at the Turkey Point Nuclear plant contains CFC's in quantities greater than 50 pounds:

Name of Unit	Section	Pounds CFC
Training building	Chiller Room - 1st Floor	240
574A Computer Room	Control Room Roof	700
574B Computer Room	Control Room Roof	700
Nuclear Maintenance Building	Chiller on Roof	140
Nuclear Administration Building	1 Chiller in Chiller Room	192
Nuclear Administration Building	2 Chiller in Chiller Room	192
Construction building	West of Building	60
Nuclear Entrance Building	On Roof	106
Containment AC units (temporary)	Outside containment	170 (2)

Note that the facility houses over 100 pieces of additional CFC-containing equipment that contains less than 50 pounds of CFC. This number will fluctuate over time with overhauls, construction of new buildings, demolition of existing buildings and replacement of existing equipment.

Re: **Responsible Official Designation Title V Program**
Permit # 0250003-002-AV

Dear Mr. Struhs:

This correspondence is to certify the "Responsible Official (s)" for the Title V Permit for Turkey Point Nuclear Plant, operated by Florida Power & Light Company. The following individual is authorized to act as the "Responsible Official (s)" for that facility, pursuant to State Rule 62-213, F.A.C.

Responsible Official	Title	Title V Facility
Vincent Laudato	Safety/ Environmental Supv	Turkey Point Nuclear Plant
Sean Fletcher	Environmental Compliance	Turkey Point Nuclear Plant

The designated "Responsible Official (s)" are hereby authorized to act on behalf of Florida Power & Light on all permit related activities for the facility.

Sincerely,

Terry Jones

Terry O. Jones
Vice President
Turkey Point Nuclear Plant
Florida Power & Light Company

Cc: Vincent Laudato

RESPONSIBLE OFFICIAL NOTIFICATION FORM

Note: A responsible official is not necessarily a designated representative under the Acid Rain Program. To become a designated representative, submit a certificate of representation to the U.S. Environmental Protection Agency (EPA) in accordance with 40 CFR Part 72.24.

Identification of Facility

1. Facility Owner/Company Name: **Florida Power and Light Company**	
2. Site Name: **Turkey Point Nuclear Plant**	3. County: **Miami-Dade**
4. Title V Air Operation Permit/Project No. *(leave blank for initial Title V applications)*: **0250003-002-AV**	

Notification Type *(Check one or more)*

≤ **INITIAL**:	Notification of responsible officials for an initial Title V application.
XXRENEWAL:	Notification of responsible officials for a renewal Title V application.
≤ **CHANGE**:	Notification of change in responsible official(s).
	Effective date of change in responsible official(s) 4/8/03

Primary Responsible Official

1. Name and Position Title of Responsible Official:
Vincent Laudato, Safety/ Environmental Supervisor

2. Responsible Official Mailing Address:
Organization/Firm: **FPL Turkey Point Nuclear Plant**

III. EMISSIONS UNIT INFORMATION

A separate Emissions Unit Information Section (including subsections A through J as required) must be completed for each emissions unit addressed in this Application for Air Permit. If submitting the application form in hard copy, indicate, in the space provided at the top of each page, the number of this Emissions Unit Information Section and the total number of Emissions Unit Information Sections submitted as part of this application.

A. GENERAL EMISSIONS UNIT INFORMATION
(All Emissions Units)

Emissions Unit Description and Status

1. Type of Emissions Unit Addressed in This Section: (Check one)

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, a single process or production unit, or activity, which produces one or more air pollutants and which has at least one definable emission point (stack or vent).

[X] This Emissions Unit Information Section addresses, as a single emissions unit, a group of process or production units and activities which has at least one definable emission point (stack or vent) but may also produce fugitive emissions.

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, one or more process or production units and activities which produce fugitive emissions only.

2. Regulated or Unregulated Emissions Unit? (Check one)

[X] The emissions unit addressed in this Emissions Unit Information Section is a regulated emissions unit.

[ ] The emissions unit addressed in this Emissions Unit Information Section is an unregulated emissions unit.

3. Description of Emissions Unit Addressed in This Section (limit to 60 characters):
(4) 2.5 MW Diesel Emergency Generators Electra-Motive [GM] Model 20-645-E4 referred to as units 3A-B & 4A-B. The generators supply backup power to the nuclear plant auxiliary equipment.

4. Emissions Unit Identification Number:
[**005**] No ID [ ] ID Unknown

5. Emissions Unit Status Code:	6. Initial Startup Date:	7. Emissions Unit Major Group SIC Code:	8. Acid Rain Unit?
A	**3A-B Nov 1972** **4A-B 1991**	**49**	[**NO**]

9. Emissions Unit Comment: (Limit to 500 Characters)
Emissions unit 005 is the existing (4) 2.5 MW Diesel Emergency Generators Electra-Motive [GM] Model 20-645-E4. The generators supply backup power to the nuclear plant auxiliary equipment. These units fire low sulfur [0.5%] diesel fuel.

Emissions Unit Control Equipment

1. Control Equipment/Method Description (Limit to 200 characters per device or method):

   none

2. Control Device or Method Code(s):

Emissions Unit Details

1. Package Unit:
   Manufacturer: **Electro-Motive Division of General Motors**
   Model Number: **Model 20-645-E4**
2. Generator Nameplate Rating: **2.5** MW
3. Incinerator Information:
   Dwell Temperature: °F
   Dwell Time: seconds
   Incinerator Afterburner Temperature: °F

B. EMISSIONS UNIT CAPACITY INFORMATION
(Regulated Emissions Units Only)

Emissions Unit Operating Capacity and Schedule

1. Maximum Heat Input Rate:	**24.89**	mmBtu/hr	
2. Maximum Incineration Rate:	lb/hr	tons/day	
3. Maximum Process or Throughput Rate:			
4. Maximum Production Rate:			
5. Requested Maximum Operating Schedule:			
	hours/day		days/week
	weeks/year	**8760**	hours/year

6. Operating Capacity/Schedule Comment (limit to 200 characters):

Maximum heat input rate reflects one emergency diesel generator. The requested operating hours is a value for all 4 generators together. Startup date for the generators = 1991.

PROCEDURES FOR STARTUP AND SHUTDOWN

Attachment PTNU1_6

Procedures for Startup / Shutdown

The emergency diesel generators are the main backup emergency electrical power supply components for the nuclear generating units. The function of the emergency diesel generator is to supply electric power to key power plant equipment during emergency loss-of-power situations. This equipment is typically test-run on a monthly basis for 1 to 2 hours to ensure that it will function properly when needed in an emergency.

Startup for a typical emergency diesel generator begins with actuating a switch which operates an air start motor on the diesel engine which "turns over" the diesel engine until ignition of the diesel fuel commences.

Shutdown is performed when the normal electric power supply to plant equipment is restored. Shutdown is performed by shutting off the diesel fuel supply to the emergency diesel generator.

Best Operating Practices include proper maintenance of the diesel engines by trained personnel on the generating unit in accordance with Nuclear Regulatory commission specifications, and the purchase of diesel fuel that also meets these strict specifications. On occasion, maintenance personnel from the diesel generator manufacturer may be utilized to perform more extensive overhaul work.

If excess emissions are suspected during operation of the emergency diesel, appropriate measures to minimize the duration of the event may include shutting down the equipment and investigating the cause of the opacity.

SUPPLEMENTAL REQURIEMENTS COMMENT

ATTACHMENT PTNU1_10

FPL requests clarification of Conditions A9 and A18 when these conditions are considered for the Title V renewal. Pursuant to Rule 62-296.570(3) F.A.C. FPL applied for an operation permit for RACT requirements. Included in this request was the compliance determination, which is reflected in Condition A18. This condition does not require either annual or renewal compliance testing if diesel fuel is used for less than 400 hours per year as allow under Rule 62-296.570(4)(a)3 F.A.C. This condition however should be clarified as follows:

A18. By this permit, annual and permit renewal compliance testing for NO_x is not required for these emission units while burning diesel fuel for less than 400 hours in each generator or engine **per year**. [Rule 62-296.570(3) and (4)(a)3 F.A.C.]

Condition A9 should be clarified to remove the sentence "However, a compliance test that demonstrates compliance with the applicable emission limiting standard shall be conducted prior to obtaining a renewed operation permit." This is standard language in Rule 62-297.310(7) F.A.C., which has been preempted by the Department's issuance of an operation permit for RACT that included the compliance requirement contained in Condition A18.

ALTERNATIVE METHODS OF OPERATION

Attachment PTNU1_11.doc
Alternative Methods of Operation

The main plant emergency diesel generators will operate on an as-needed basis in order to provide backup power to the nuclear plant equipment in the event of a loss of external power. A typical operation of the diesel generators is less than 400 hr/yr for each generator.

The main plant diesel generators are test-started and run several times per month in accordance with Nuclear Regulatory Commission (NRC) regulations, in order to assure operability if needed in the event of a loss of external power.

This equipment burns distillate oil fuel.

[**X**] This Emissions Unit Information Section addresses, as a single emissions unit, a group of process or production units and activities which has at least one definable emission point (stack or vent) but may also produce fugitive emissions.

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, one or more process or production units and activities which produce fugitive emissions only.

2. Regulated or Unregulated Emissions Unit? (Check one)

[ ] The emissions unit addressed in this Emissions Unit Information Section is a regulated emissions unit.

[X] The emissions unit addressed in this Emissions Unit Information Section is an unregulated emissions unit.

3. Description of Emissions Unit Addressed in This Section (limit to 60 characters):
Auxiliary Emergency Diesel Generators

4. Emissions Unit Identification Number: **006**

6. Emission Factor: **4.41 lb/MMBtu** Reference: **AP-42**	7. Emissions Method Code: **3**

8. Calculation of Emissions (limit to 600 characters):

4.41 LB/mmBtu X 15 gph X 0.136 mmBtu/gal = 9.0 lbs/hour
4.41 LB/mmBtu X 1 gph X 0.136 mmBtu/gal = 0.6 lbs/hour
4.41 LB/mmBtu X 2 gph X 0.136 mmBtu/gal = 1.2 lbs/hour
4.41 LB/mmBtu X 30 gph X 0.136 mmBtu/gal = 17.99 lbs/hour
9 + 0.6 + 1.2 + 17.99 = 9.0 lbs/hour
28.79 LB/hr X 8,760 hr/yr x ton/2,000 = 126.1

PROCEDURES FOR STARTUP AND SHUTDOWN

Attachment PTNU2_6

Procedures for Startup / Shutdown

The emergency diesel generators are the main backup power supply components for the nuclear plant security system, sewage plant, and meteorological tower. The function of the emergency diesel generators are to supply electric power to various plant equipment during loss-of-power situations. This equipment is typically test-run on a monthly basis to ensure that it will function properly when needed in an emergency.

Startup for a typical emergency diesel generator begins with actuating a switch which sends an electric signal to a starter motor on the diesel engine which "turns over" the diesel engine until ignition of the diesel fuel commences.

Shutdown is performed when the normal electric power supply to plant equipment is restored. Shutdown is performed by shutting off the diesel fuel supply to the emergency diesel generator.

Best Operating Practices include proper maintenance of the diesel engine on the generating unit, and monitoring the visible emissions from the emergency diesel generator to ensure that the opacity limitation is not exceeded. All efforts to minimize both the level and duration of excess emissions are undertaken.

ATTACHMENT PTNU2-11

ALTERNATIVE METHODS OF OPERATION

Attachment PTNU2_11

Alternative Methods of Operation

The auxiliary diesel generators are fired with light distillate oil fuel. Operating hours on the diesel generators is typically less than 400 hours per year.

Each emergency diesel generator is typically started up at least once per month and run for about 1/2 hour to ensure operability if needed to provide backup power to various plant operating equipment or to the meteorological towers.

III. EMISSIONS UNIT INFORMATION

A separate Emissions Unit Information Section (including subsections A through J as required) must be completed for each emissions unit addressed in this Application for Air Permit. If submitting the application form in hard copy, indicate, in the space provided at the top of each page, the number of this Emissions Unit Information Section and the total number of Emissions Unit Information Sections submitted as part of this application.

A. GENERAL EMISSIONS UNIT INFORMATION (All Emissions Units)

Emissions Unit Description and Status

1. Type of Emissions Unit Addressed in This Section: (Check one)

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, a single process or production unit, or activity, which produces one or more air pollutants and which has at least one definable emission point (stack or vent).

[**X**] This Emissions Unit Information Section addresses, as a single emissions unit, a group of process or production units and activities which has at least one definable emission point (stack or vent) but may also produce fugitive emissions.

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, one or more process or production units and activities which produce fugitive emissions only.

2. Regulated or Unregulated Emissions Unit? (Check one)

[ ] The emissions unit addressed in this Emissions Unit Information Section is a regulated emissions unit.

[**X**] The emissions unit addressed in this Emissions Unit Information Section is an unregulated emissions unit.

3. Description of Emissions Unit Addressed in This Section (limit to 60 characters):

PROCEDURES FOR STARTUP AND SHUTDOWN

Attachment PTNU3_6

Procedures for Startup / Shutdown

The diesel driver is the motive power supply component for the nuclear steam boiler diesel driven feed pump. The function of the diesel driver is to supply motive power to the standby steam generator feed pump during loss-of-power situations. This equipment is typically test-run on a monthly basis to ensure that it will function properly when needed in an emergency.

Startup for the diesel driver begins with actuating a switch which sends an electric signal to a starter motor on the diesel engine which "turns over" the diesel engine until ignition of the diesel fuel commences.

Shutdown is performed when the normal electric power supply to plant equipment is restored. Shutdown is performed by shutting off the diesel fuel supply to the diesel driver.

Best Operating Practices include proper maintenance of the diesel engine on the generating unit, and monitoring the visible emissions from the emergency diesel generator to ensure that the opacity limitation is not exceeded. All efforts to minimize both the level and duration of excess emissions are undertaken.

ATTACHMENT PTNU3-11

ALTERNATIVE METHODS OF OPERATION

Attachment PTNU3_11

Alternative Methods of Operation

The miscellaneous diesel equipment is fired with light distillate oil fuel. Operating hours on the miscellaneous diesel equipment is typically less than 400 hours per year.

Miscellaneous diesel equipment is typically started as needed to provide air or other services to various plant operating equipment.

III. EMISSIONS UNIT INFORMATION

A separate Emissions Unit Information Section (including subsections A through J as required) must be completed for each emissions unit addressed in this Application for Air Permit. If submitting the application form in hard copy, indicate, in the space provided at the top of each page, the number of this Emissions Unit Information Section and the total number of Emissions Unit Information Sections submitted as part of this application.

9. GENERAL EMISSIONS UNIT INFORMATION (All Emissions Units)

Emissions Unit Description and Status

9. Type of Emissions Unit Addressed in This Section: (Check one)

[ ] This Emissions Unit Information Section addresses, as a single emissions unit, a single process or production unit, or activity, which produces one or more air pollutants and which has at least one definable emission point (stack or vent).

[**X**] This Emissions Unit Information Section addresses, as a single emissions unit, a group of process or production units and activities which has at least one definable emission point (stack or vent) but may also produce fugitive emissions.

[ ]This Emissions Unit Information Section addresses, as a single emissions unit, one or more process or production units and activities which produce fugitive emissions only.

2. Regulated or Unregulated Emissions Unit? (Check one)

[ ] The emissions unit addressed in this Emissions Unit Information Section is a regulated emissions unit.

[X] The emissions unit addressed in this Emissions Unit Information Section is an unregulated emissions unit.

3. Description of Emissions Unit Addressed in This Section (limit to 60 characters):
Unregulated emission units

4. Emissions Unit Identification Number:

9. Emissions Unit Status Code:	9. Initial Startup Date:	9. Emissions Unit Major Group SIC Code:	8. Acid Rain Unit?
A		**49**	**[No]**

9. Emissions Unit Comment: (Limit to 500 Characters)
This emission units section covers all unregulated sources at the Turkey Point Nuclear Site that are not addressed elsewhere in this application. Please refer to Attachment PTN-FW for a list of included sources. Note: this section includes the diesel fire pump, which is exempted form permitting by DEP Rule 62-210.300(3)(a)21, and is also exempted from NO_x RACT by DEP Rule 62-296.570(1)(b).
