Subject: Gulf Comments on Crist HSC AC
Attachments: FDEP Crist HSC RAI Response 012610.pdf

Importance: High

Gulf has discovered some typo errors in the Crist HSC Air Construction Permit 0330045-029-AC under Section B. Unit 6: Steam Turbine on Page 9 of 11.

- * Change BP43 to BB43 and BP43PA to BB43PA in the first sentence.
- * Revise the 7 MW of additional generation to 8.9 MW as noted in our RAI letter dated January 26, 2010 below.

Please let me know if we need to make a certified submission regarding these items. Hopefully these changes can be managed as typos. Please let me know if you receive this email.
Thanks, Dwain

Subject: Crist RAI Response for HSC & Turbine Upgrade
Importance: High

Please find attached an electronic copy of the Gulf Power response to the January 12, 2010 FDEP RAI letter for the Crist Fuel Blend and Crist Unit 6 Turbine Upgrade Projects. The original letter will be certified mailed later today to you. A separate submission for confidentiality items has been prepared by HGS and will be delivered to Trina later today. One noteworthy item is that Gulf received an updated efficiency model run of the Crist Unit 6 Turbine which slightly increased the efficiency. This had a very minor impact to the emissions for the project. This information is included with the RAI submission.

Please let me know if you receive this correspondence and call me to discuss any items of concern. In addition, please set up a face to face meeting with me to further address any issues or concerns with these projects. Thanks, Dwain
