RE: 112(j) Notification Information
Facility ID No. 0450002
Arizona Chemical, Port St. Joe, Fl.

Dear Ms. Phillips:

This letter shall serve as a response to the Florida Department of Environmental Protection's Letter signed by Mr. Scott M. Sheplak, dated April 5, 2002, requesting notification information according to 112(j) of the Clean Air Act Amendments.

Arizona Chemical, a subsidiary of International Paper, owns and operates the Port St. Joe facility, located at 345 Kenny Mill Road, in Port St. Joe, Florida. The facility was originally constructed in 1957. The facility manufactures products that are made from by-products purchased from kraft pulp mills. Crude Tall Oil is processed into chemical intermediates and resins that are sold into commerce as ingredients in the production of adhesives, plastics, inks, paints, rubber products, and roofing materials. Operations at the facility are classified under Standard Industrial Code 2861 (gum and wood chemicals). The facility has one major operational area, the tall oil operations. Additionally, there is ancillary equipment associated with utilities and wastewater operations.

This facility meets the regulatory definition of a major source for Title V purposes. The facility-wide potential to emit (PTE) emissions of volatile organic compounds (VOC), oxides of nitrogen (NOx), particulate matter (PM), and sulfur dioxide (SO₂) is greater than 100 tons per year. The Arizona Chemical Port St. Joe facility is **not a major** source for any Hazardous Air Pollutants (HAP): therefore there are no potentially applicable MACT source categories for hazardous air pollutants (HAP) that require notification under 112(j).

If you have any questions, or if you need more information, please feel free to call Ann Jeffries, Environmental Manager, at (850) 229-8271 ext. 306.

Sincerely,
ARIZONA CHEMICAL
