Subject: New Project for Cemex North Brooksville

Application is under 0530010-DIF-K

Elizabeth and Teresa.

We need to open a new project to address a followup issue related to a permit we issued today.

Can you sort this out and have Teresa as the processor unless Jeff or Russell claim it.

Russell, Jeff. If either of you takes it, I'll be very happy to explain the issue to the selected engineer.

Facility No. is 0530010

We can call it something like:

"Thallium and Mercury Material Testing"

The language on which this is based is from the Final Determination as follows:

Instead of requesting a further extension, CEMEX submitted a proposal on November 15, 2007 for Hg raw material and fuel input monitoring and reduced control equipment Tl sampling. Following discussions with the Department, CEMEX verbally requested through its consultant (Koogler and Associates) withdrawal of the November 15 proposal to allow prompt finalization of the permit and with the understanding that the Tl issue would be reassessed through a permitting action following publication of the Notice and issuance of the final permit for the changes allowed by the draft permit.
