RE: Proposed Anhydrous Ammonia Storage and
Transfer Facility, Port Sutton

Dear Mr. Hearon,

Please reference your letter of July 28, 1980, regarding the above referenced project. I have reviewed the information furnished regarding the proposed change to IMC's Port Sutton facility and have determined that no modification of N.P.D.E.S. permit No. FL0000264 for the Port Sutton facility will be necessary as a result of the proposed project.

If you have not already contacted the Corps of Engineers regarding the proposed project, however, I would strongly advise that you do so. It would seem that the proposed work on and around IMC's existing dock facilities will probably require a section 10/404 permit from the Corps.

Sincerely yours,

William H. Cloward
Chief, Permits Section
Water Enforcement Branch
Enforcement Division
