Re: HILLSBOROUGH COUNTY DEPARTMENT OF SOLID WASTE MANAGEMENT -  
PROJECT #0570261-009-AC-DRAFT

Dear Mr. Linero,

On behalf of Hillsborough County, FL and Covanta Hillsborough, Inc, I am providing the following comments on DRAFT Letter (Document 396DMODIFICATION - #0570261-009 - copy attached) provided as part of the information issued by your office on August 8, 2007.

We would like to suggest that the last two sentences at the end of page one be revised to read as follows.

Unit 4 will be a mass burn unit incorporating much of the same technology as the existing units including: combustion controls; combustion on a reverse-reciprocating grate system; ash discharge system; energy recovery through the furnace waterwall, superheater and economizers; electric power production; and a pollution control system consisting of a spray dryer, fabric filter, activated carbon injection system and a selective non-catalytic reduction (SNCR) system. In addition, the new unit will incorporate the Covanta LN system for strategic combustion air management or flue gas recirculation to limit NOx formation.

Following review of this information we would be glad to discuss further with you any questions you may have about Covanta's NOx control technology. Please feel free to contact me, Brian Bahor (973-882-7236), or Steve Goff (973-882-4192) our Covanta LN™ process expert directly.

Sincerely yours,

A handwritten signature in blue ink, appearing to read "Joseph R. Treshler".

Joseph R Treshler PE - FL # 32074
