MEMORANDUM

DATE: March 19, 1998
TO: Clair Fancy
FROM: **PK** Richard C. Kirby, IV
SUBJECT: Tampa Water Resource Recovery Project

The EPC Air Management Division has been asked to provide permit conditions for a conceptual design of a stationary air pollution source. The project is comprised of a facility to further treat AWT reclaimed water from the City of Tampa's wastewater treatment plant. The process involves handling of granular carbon and lime, recalcining lime, and regenerating carbon. Natural gas is proposed as a fuel for the process. The proposed operation is adjacent to the City's AWT plant, which is currently a major source of air pollution. The AWT plant emissions are above 250 TPY for NOx and CO.

The proposed project is part of a team permitting effort which includes FDEP SWD, EPC, and the City of Tampa. Originally, the proposed project did not include any of the specifics necessary to write Federally Enforceable permit conditions. I have explained the SIP requirement for permit conditions to the group and believe they now understand the level of detail needed to write valid specific conditions, (i.e. type of fuel, maximum usage, types of material, maximum usage, types of material conveying and storage equipment, types of control equipment with minimum control parameters such as air to cloth ratios and incinerator temperature and detention times).

I believe if these criteria are met and proper public notice is given the air section of the team permit should be Federally enforceable. Please let me know if you see any problems with this course of action.
