RE: Draft Air Permit #0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compression Station #27

To whom this may concern,

My family moved to Thonotosassa two years ago in order to get out of the city of Tampa for reasons of poor air quality and crime. Members of my family have asthma and good air quality is not optional for them. We bought four acres on the north shore of Lake Thonotosassa to build our dream house. The house is under construction and six to eight week from completion. We have several concerns in reference to the proposed Compression Station #27. I understand that eight million dollars has been spent recently, to put a natural filter in place to restore the water quality from Baker Creek into Lake Thonotosassa. Why would you now allow such pollutants as would be produced by the Compression Station to destroy the improvement in water quality? The Hillsborough County water system has ties to the lake. In times of drought, the Lake feeds the Hillsborough River not far from the pumping station. Have these issues been taken into consideration? The proposed site for Compression Station 27 lies between two elementary schools. Is the health of our children no longer a concern, or is big money more important. The ENRON people screwed-over there own people do you think they would hesitate do to it to the residents of Thonotosassa?

We have American Bald Eagle, Osprey, Hawks and other birds of pray that feed in the Lake and nest close by. We have foxes, raccoons, cranes, and other

March 20, 2002

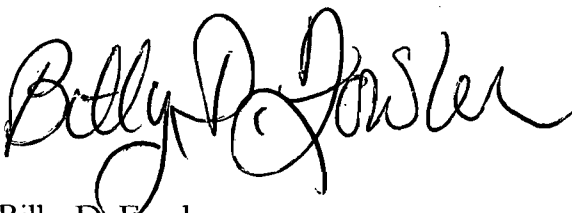

waterfowl depend on the lake for food and water. In addition, residents use the lake for fishing and recreation. This is the largest lake in Hillsborough County. What are you people thinking? We have far too much to loose by allowing Florida Gas to build the Compression Station #27 in Thonotosassa.

Other sites within the corridor are better suited for such use. We ask that you take into consideration our growing community and the quality of live therein. Take into consideration the negative impact on the residence, wildlife, the Lake, and the property values.. After all, it is your job to PROTECT the environment. To allow Florida Gas to proceed would not be in keeping with protection of the environment. The residents were not properly nor timely notified of any intention to place a compression station in Thonotosassa. The first that most of us heard of this was on March 14<sup>th</sup> 2002, when the notice to permit came out in the legal ads of the Tampa Tribune. We feel this is a legal issue that must be addressed.

Further, no matter which location you choose the issues of the air filtering systems and mufflers for such Compression Stations must be addressed. Florida's ecosystem must be protected, and the minimum standards are simply not enough. Please direct Florida Gas to pursue an alternative location with less negative environmental impact.

Furthermore, This correspondence may serve as notice that the residence of Thonotosassa are prepared to take legal action should our concerns and objections be ignored.

Respectfully,

Billy. D. Fowler

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live very close to the proposed location for the Florida Gas Transmission Compression Station No. 27, on C.R. 579 in Thonotosassa Florida. I was shocked to learn of this station coming into our community with very little regulation on the output of air pollution and the noise of such a powerful pair of engines (7,222 bhp each). The location is very close to three public elementary schools, a county park, a Little League field, a youth football field, a large lake that has recently been making a comeback from past problems, numerous residential homes, and an assortment of agricultural areas that could be greatly affected by the emissions coming from this project.

I strongly object to this project, and in my opinion, there are other locations within the corridor that would be more suitable for this project. If it has to be put in this, or any location in Thonotosassa, I would hope that every safeguard possible (Filters, Mufflers, etc.) be put in place for the protection of our valued community. Most of the people that I know in this community moved out here to live away from the pollutants of the city. The way of life we have here is going to be impacted in a very negative way if this proposal goes through as planned. I have children, and do not think that the wants of this company should be entitled to put their well being, or that of anybody or anything else in the community, at risk.

Please contact me with any new developments on this issue at any time.

RE: Proposed Site C.R. 579  
Draft Permit #0571279-001-AC  
Station #27

Dear Sirs,

It has been brought to our community's attention that there is a possibility of a Turbine Gas Transmission Station located at the above listed site. As a concerned citizen I would like to ask that these factors be considered before the actual Transmission Station is to be built.

- 1- There are three (3) schools located in the immediate area of were this Transmission Station is to be built. One of the schools is an elementary school located not even 1-mile away from this location. The other schools are a middle school and a high school.
- 2- There is several community and public parks were families gather and children play sports events, in the adjacent areas as well.
- 3- Lake Thonotossassa that will deeply be affected from all elements from the Transmission Station, which our county tax dollars went towards 2 years ago to refurbish this lake from another environmental disaster.
- 4- There are (3) three campsites in the immediate area that our snowbirds (northern people) visit in the winter months that will dissipate, because of the quality of air, noise, etc. from the Transmission Station. Not to mention the financial income from the lack of visitors to our community.
- 5- Located in the immediate area are several large orange and strawberry groves that supply local as well as statewide grocery stores.

The overall legalities, permitting, notification have been rather sneaky and peculiar to this point. As it stands as a community we would not like to see the Transmission Station built in our neighborhood, because of all the listed above facts. We would like to invite you to visit our community to see these above mentioned surrounding areas that will be deeply effected. Also, at this time I would like to know who in the EPA structure gave the permission to build this Transmission Station. Please call me at 813-986-5858 if you have any further questions and/or comments.

Regards,

Robert H. Dexter

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

Dear Sir or Madam:

We would like to go on record as vehemently opposing the aforementioned Draft Air Permit for Hillsborough Compressor Station #27.

The site chosen, off CR 579, is the highest elevation in Hillsborough County. This station will be adjacent to and essentially in a residential neighborhood, where homeowners have invested hundreds of thousands of dollars in their homes and our community. The proposed site will be located only a few hundred yards from a county park and an elementary school. As this site has applied for a permit with the least amount of control associated with it, we are convinced that all costs associated with filtration, muffling devices, etc., will be kept at a minimum, as this is a for profit concern.

I am not aware of any plans to retrofit the schools air conditioning systems to handle the onslaught of 60 tons of particulate matter coming from these stacks. Who will address and absorb this cost, the county, the State of Florida, the EPA?

Who also will be responsible for the fall out of the sulfuric dioxide, which mixed with water results in "acid rain" on the environment? What will the impact be on Lake Thonotosassa, the largest lake in Hillsborough County? As the lake lies northeast of the proposed site and our prevailing winds are out of the southwest 40% of the time, we can assume that this will be a detriment to the ecosystem in and around the lake.

There are far more suitable industrial sites where this compression station could be located. One in particular comes to mind where dirt was sourced for construction by Mr. Azzarelli. The land at Joe Ebert Road and CR 579 has already been degraded and abandoned, yet another eye sore for Thonotosassa residents. Or choose a site adjacent to one of our 8 other borrow pit sites or perhaps near the landfill.

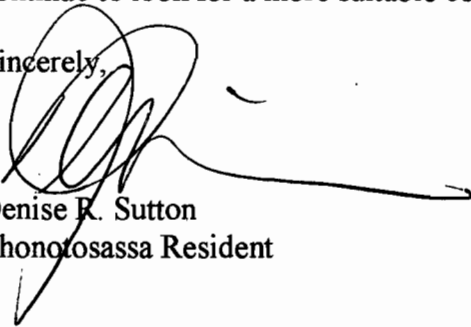

RECEIVED

MAR 25 2002

BUREAU OF AIR REGULATION

In closing, our community is and should not be considered the county's dumping ground for all of its "unsightly" projects. A steering committee for our community is actively putting together a master plan for Thonotosassa. I can assure you it does not contemplate a compressor station in a residential neighborhood. We join the residents of Taylor Road, the original site for this station, and respectfully ask that you deny the permit for the CR 579 site and ask Florida Gas to continue to look for a more suitable commercial site.

Sincerely,

Denise R. Sutton  
Thonotosassa Resident

Gentlemen,

I wish to express my extreme displeasure with your intent to allow subject project to continue. There are hundreds of families like mine living within 1/2 mile of this project, all with the same feeling. We do not want our precious environment ruined by undesirable odors, ash, chemicals, noise and other pollutants, not to mention the noise. Nor do we desire to see our land values plunge.

We all have many years of our lives invested in the development and improvement of Thonotosassa. Please do not destroy all our dreams by continuing with this project.

Thank you for your kind consideration.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live at 10334 Skewlee Rd near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on CR 579, is the highest elevation in Hillsborough County and is in close proximity to a residential community. Hundreds of families live within this area and would be adversely affected by noise and air pollutants that would be generated by this facility. I am told that this station would produce carbon monoxide, nitrous oxide and sulfur dioxide. These pollutants combined with rain produce acid rain and there are all kinds of articles about the detrimental effects of acid rain. This is a farming and agricultural area with many citrus trees and farm animals and wildlife. Also in the direct path of the plant is Lake Thonotosassa and less than five miles is the bypass canal which is Hillsborough counties primary source of drinking water. Three schools are in the area, along with day cares and plant nurseries. This is a community of many mobile home parks along with expensive residential houses. We already have Taylor land fill in the area, which was a superfund project. We don't need another environmental mistake to clean up.

I attended a community meeting last night and was disappointed to find out that the only way anyone new about this compression station was found in the classified section of the newspaper last week. Something this important and detrimental to the environment should have been publicized to the community. In the application for air construction permit, the site map that is attached to the permit is incorrect. The map is dated 1999, but on the map it references Golden Gate Speedway which has not been here for at least twenty years. It also does not show the bypass canal. It seems that there is deception going on especially since Florida Gas is affiliated with ENRON.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider this community's quality of life and the negative impact this would have on the environment. Please direct Florida Gas to pursue an alternative site, one that is not in a residential community.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

BUREAU OF AIR REGULATION

I have a great concern pertaining to the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to residential community, a public park as well as Thonotosassa Elementary school. There will be hundreds of citizens greatly affected by the plants operation. Please review the environmental plan before you issue a permit. As a citizen, I need the Department of Environmental Protection to help protect myself, family and fellow residents from the environmental hazards this plant will produce. Please, require the Florida Gas Transmission Company to take extreme measures in protecting the community from both noise and air pollution. I ask that the DEP, require additional noise buffers inside and outside the plant. In addition, I also ask that additional air filters and/or scrubbers be installed to reduce air pollution. Although the plant construction cost for Florida Gas Transmission Company will increase, I believe based on research that the cost will be minimal pertain to future costs of health issues that will arise if these precautions are not considered.

As an alternative, there are sites within the I-4/Route 301 corridor that would be more suitable for this gas plant. I ask that you consider our quality of life and the negative impact this would have on the environment pertaining to the surrounding community.

Thank you for consideration on this issue.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

BUREAU OF AIR REGULATION

I have a great concern pertaining to the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to residential community, a public park as well as Thonotosassa Elementary school. There will be hundreds of citizens greatly affected by the plants operation. Please review the environmental plan before you issue a permit. As a citizen, I need the Department of Environmental Protection to help protect myself, family and fellow residents from the environmental hazards this plant will produce. Please, require the Florida Gas Transmission Company to take extreme measures in protecting the community from both noise and air pollution. I ask that the DEP, require additional noise buffers inside and outside the plant. In addition, I also ask that additional air filters and/or scrubbers be installed to reduce air pollution. Although the plant construction cost for Florida Gas Transmission Company will increase, I believe based on research that the cost will be minimal pertain to future costs of health issues that will arise if these precautions are not considered.

As an alternative, there are sites within the I-4/Route 301 corridor that would be more suitable for this gas plant. I ask that you consider our quality of life and the negative impact this would have on the environment pertaining to the surrounding community.

Thank you for consideration on this issue.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

To Whom it May Concern:

I attended a town meeting last night with my husband and was shocked to find out that a Florida Gas Compressor Station (#27) is going to be built close to our home (less than 1000 yds). We moved to Thonotosassa 4 years ago because of the quality of life in this community. Since moving here, we have a beautiful 3-year-old daughter and (hopefully) a son due in June. We love this area and do not want a gas compressor so close to our home.

We were informed at the meeting that the compressor would produce over 55 tons of carbon monoxide into the air each year, among many other harmful chemicals. I am very concerned for the welfare of my children playing outside so close to the compressor. I am also concerned about the **2 elementary schools** and **Recreation Park** within 1 mile of the proposed site.

**This will directly affect THOUSANDS of children!**

I'm sure that this compressor is needed, so I am not opposed to it being built. However, it does **not** need to be built so close to this community, and families, and CHILDREN. There is plenty of undeveloped land just North of Thonotosassa on Hwy 301. Please consider our quality of life and choose a more suitable area for the gas compressor.

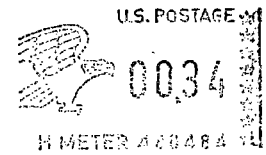

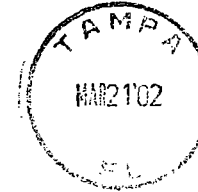

Sincerely,

Michelle and Anthony Kolch  
10402 Elena Lane, Thonotosassa, FL 33592

RE: Draft Air Permit #0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compression Station #27

To whom this may concern,

My family moved to Thonotosassa two years ago in order to get out of the city of Tampa for reasons of poor air quality and crime. Members of my family have asthma and good air quality is not optional for them. We bought four acres on the north shore of Lake Thonotosassa to build our dream house. The house is under construction and six to eight week from completion. We have several concerns in reference to the proposed Compression Station #27. I understand that eight million dollars has been spent recently, to put a natural filter in place to restore the water quality from Baker Creek into Lake Thonotosassa. Why would you now allow such pollutants as would be produced by the Compression Station to destroy the improvement in water quality? The Hillsborough County water system has ties to the lake. In times of drought, the Lake feeds the Hillsborough River not far from the pumping station. Have these issues been taken into consideration? The proposed site for Compression Station 27 lies between two elementary schools. Is the health of our children no longer a concern, or is big money more important. The ENRON people screwed-over there own people do you think they would hesitate do to it to the residents of Thonotosassa?

We have American Bald Eagle, Osprey, Hawks and other birds of pray that feed in the Lake and nest close by. We have foxes, raccoons, cranes, and other

March 20, 2002

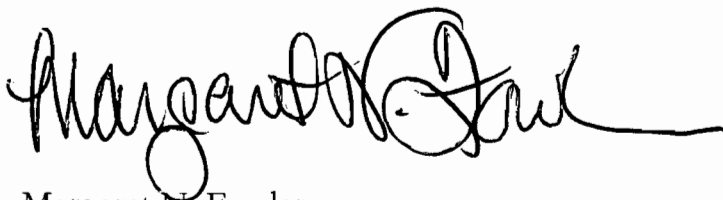

waterfowl depend on the lake for food and water. In addition, residents use the lake for fishing and recreation. This is the largest lake in Hillsborough County. What are you people thinking? We have far too much to loose by allowing Florida Gas to build the Compression Station #27 in Thonotosassa.

Other sites within the corridor are better suited for such use. We ask that you take into consideration our growing community and the quality of live therein. Take into consideration the negative impact on the residence, wildlife, the Lake, and the property values.. After all, it is your job to PROTECT the environment. To allow Florida Gas to proceed would not be in keeping with protection of the environment. The residents were not properly nor timely notified of any intention to place a compression station in Thonotosassa. The first that most of us heard of this was on March 14<sup>th</sup> 2002, when the notice to permit came out in the legal ads of the Tampa Tribune. We feel this is a legal issue that must be addressed.

Further, no matter which location you choose the issues of the air filtering systems and mufflers for such Compression Stations must be addressed. Florida's ecosystem must be protected, and the minimum standards are simply not enough. Please direct Florida Gas to pursue an alternative location with less negative environmental impact.

Furthermore, This correspondence may serve as notice that the residence of Thonotosassa are prepared to take legal action should our concerns and objections be ignored.

Respectfully,

Margaret N. Fowler

RE: Proposed Site C.R. 579  
Draft Permit #0571279-001-AC  
Station #27

Dear Sirs,

It has been brought to our community's attention that there is a possibility of a Turbine Gas Transmission Station located at the above listed site. As a concerned citizen I would like to ask that these factors be considered before the actual Transmission Station is to be built.

- 1- There are three (3) schools located in the immediate area of were this Transmission Station is to be built. One of the schools is an elementary school located not even 1-mile away from this location. The other schools are a middle school and a high school.
- 2- There is several community and public parks were families gather and children play sports events, in the adjacent areas as well.
- 3- Lake Thonotossassa that will deeply be affected from all elements from the Transmission Station, which our county tax dollars went towards 2 years ago to refurbish this lake from another environmental disaster.
- 4- There are (3) three campsites in the immediate area that our snowbirds (northern people) visit in the winter months that will dissipate, because of the quality of air, noise, etc. from the Transmission Station. Not to mention the financial income from the lack of visitors to our community.
- 5- Located in the immediate area are several large orange and strawberry groves that supply local as well as statewide grocery stores.

The overall legalities, permitting, notification have been rather sneaky and peculiar to this point. As it stands as a community we would not like to see the Transmission Station built in our neighborhood, because of all the listed above facts. We would like to invite you to visit our community to see these above mentioned surrounding areas that will be deeply effected. Also, at this time I would like to know who in the EPA structure gave the permission to build this Transmission Station. Please call me at 813-986-5858 if you have any further questions and/or comments.

Regards,

*Bess Dexter*

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

To Whom it may concern, BUREAU OF AIR REGULATION

3-20-02

As you can see by our address - we live 3 doors down from the proposed site of this gas transmission facility.

We are very concerned about several factors this facility could impact our neighborhood.

① air pollution - as I am the parent of a disabled child whose immune system is compromised, we also have a nesting pair of American eagles as well as various other nesting pairs of ~~prey~~<sup>birds</sup> of prey. And 2 elementary schools and a county park in very close proximity.

② Noise - even though we understand that some type of buffers will be in use - we don't feel that they will be adequate.

③ property values - I purchased my home and property in sept 2001 for \$90,000 - if I had known about this facility being built, I would not have bought this particular property. I feel I will never be able to recoup the amount I paid for it.

I certainly hope this letter has brought these points to your attention and will possibly be considered in any decisions concerning the site chosen for this facility.

Sincerely,

RE: **OPPOSE** DRAFT AIR PERMIT NO. 0571279-001-AC  
FLORIDA GAS TRANSMISSION COMPANY  
HILLSBOROUGH COMPRESSOR STATION NO. 27

To Whom It May Concern:

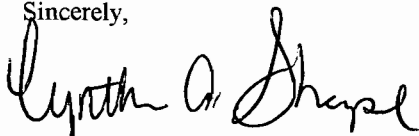

I live at 10541 Skewlee Road in Thonotosassa, Florida, very near to the proposed location for the Florida Gas Transmission Compression Station 27.

My family opposes the building and operation of this station at this site for the following reasons:

- We are greatly concerned of the noise this station would create. We moved to Thonotosassa because of the quiet, rural, country living. While barriers and sound reduction measures will be constructed, we do not believe that these measures are enough. We do not want to hear a constant drone of engines that will run seven days a week, 24 hours a day. This will greatly impact our quiet quality of life.
- We are also greatly concerned of the pollutants that would be generated by this facility. We are told that measures will be taken to keep emissions down, but this is simply not enough. We have an 18-month-old child, and surrounding us are many more families with children. We do not know the long-term effects of the emissions to the health of our families. Structures such as this one should be built very far away from residential areas. This is too close to a residential area, which includes homes, parks and schools.
- We and others around us use our land to grow food and raise animals. We are concerned the pollutants will contaminate the foods we grow to eat. Again, there are no assurances to our safety and to the long-range impacts to our health.
- We in Thonotosassa value the vistas along CR 579, which make Thonotosassa unique. This large, imposing structure will diminish this beautiful vista.
- This station, because of many of the reasons listed above, will decrease our property values.
- We don't believe we have been properly notified of the decision to locate this station at this site off of CR 579. The last we heard, the station was to be located at a site off Taylor Road, which has fewer families living nearby. When the decision was made to make the CR 579 the primary site, I believe we should have been notified. In addition, we were not given ample opportunity to address this most current action, as the sign at the site was posted late, and it is partially obstructed and difficult to see. If not for my neighbors, I probably wouldn't have known of this latest request.

We believe that there are other sites within the corridor that would be more suitable. Sites that are not located near residential areas, schools and parks. Sites that are not located near food growth and production areas. This station will have a negative impact on our quality of life and those who live around us. We urge you to not allow this station to be located at this proposed site and rather find an alternative site.

Sincerely,

Re: Draft Air Permit No# 0571279-001-AC  
Florida Gas Transmission Co.  
Hillsborough Compressor Station Co No 27

To Whom It May Concern:

I am writing this letter in regards to the proposed site on C.R. 579 for the location of Florida Gas Transmission Co. for the building of a Compressor Station. I live within one mile of this proposed site. My concern is for all the surrounding residences in this area regarding the pollution and how this will affect our clean air environment. I also understand this facility will operate at a noise level about half as loud as a jet airplane on take off, which will be continuous for 24 hours a day.

Please take notice that several schools are in the vicinity of this proposed building site, and the homes, which are in a 1,000 feet of this complex. If this process is going to take place we would like the EPA to consider the highest level of protection for all residences, schools, and daycares in this area.

I am **opposing** the building of this station, until I know that everything is being done to provide our neighborhoods with the utmost consideration of our protection, which is provide by the EPA.

Our entire community held a meeting on Tuesday March 19<sup>th</sup> regarding our concerns with this proposed site. I believe 100% opposed the building of this station and they felt like the EPA held the lowest standard for this station.

God willing you will receive many other letters such as this one, in regards to the strict standards we wish to be enforced for our protection. Thank you for your consideration of this matter.

Respectfully,

Ellen Dunn

RE: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

To Whom It May Concern:

My husband and I, as well as our children, live near the proposed location for the above noted Florida Gas Transmission Compressor Station #27 in Thonotosassa, Florida.

We want to register our objection to the station being built and used in this vicinity. This area is also in a very close proximity to several schools and a county park not to mention the homes and individuals that will be affected.

It should also be noted that from what was mentioned at a town meeting that the only notice given was a very small public notice in the classified section of the paper. Nothing was posted on the property for people to see when they passed daily in front of the property of the proposed station. Maybe they technically met their legal obligations for public notice (and I even question that) and notices to people who live within 1,000 feet, but what about a moral obligation for people in the area who will be adversely affected that may live further away than that?

How can you honestly condone something that will be spreading carbon monoxide and sulfur dioxide into the air, especially in that it will be forming acidic pollutants for Lake Thonotosassa? We do not want to have our community polluted with acid rain, soot, dirt and even excessive noise from the engines that will be necessary to operate this plant.

No amount of beautification to camouflage the look this will do to our beautiful rural countryside nor any amount of sound attenuation will compensate for the negative impact this will have on the environment and the residential aspects of the community.

Sincerely,

*Stan & Carolyn Hankins*

**PETITION IN OPPOSITION OF ABOVE PROPOSED FACILITY**

We would like to make you aware of several of our concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

RE: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station #27

**PETITION IN OPPOSITION OF ABOVE PROPOSED FACILITY**

We would like to make you aware of several of our concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

BUREAU OF AIR REGULATION

Dear Sir and Madam:

We have just learned of the above referenced Gas Company facility that has been proposed for construction on County Road 579 in Thonotosassa. While we understand that neighbors within 1000 feet were notified, as per the law, there are many other concerned neighbors, schools, churches and plant farms around that were not notified. We do not feel that proper notification was given to the community to allow for public opinion to be known concerning a plant such as this. We understand that it will generate a lot of noise and that it will put many pollutants into the air.

I (we) would like to make you aware of several of my (our) concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

Thank you for your time in reading this letter and any consideration you can give to our concerns.

Sincerely,

March 20, 2002

BUREAU OF AIR REGULATION

Dear Sir and Madam:

We have just learned of the above referenced Gas Company facility that has been proposed for construction on County Road 579 in Thonotosassa. While we understand that neighbors within 1000 feet were notified, as per the law, there are many other concerned neighbors, schools, churches and plant farms around that were not notified. We do not feel that proper notification was given to the community to allow for public opinion to be known concerning a plant such as this. We understand that it will generate a lot of noise and that it will put many pollutants into the air.

I (we) would like to make you aware of several of my (our) concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

Thank you for your time in reading this letter and any consideration you can give to our concerns.

I (we) would like to make you aware of several of my (our) concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

Thank you for your time in reading this letter and any consideration you can give to our concerns.

Sincerely,

*Curtis E. Gore*  
*Donna M. Gore*

BUREAU OF AIR REGULATION

Dear Sir and Madam:

We have just learned of the above referenced Gas Company facility that has been proposed for construction on County Road 579 in Thonotosassa. While we understand that neighbors within 1000 feet were notified, as per the law, there are many other concerned neighbors, schools, churches and plant farms around that were not notified. We do not feel that proper notification was given to the community to allow for public opinion to be known concerning a plant such as this. We understand that it will generate a lot of noise and that it will put many pollutants into the air.

I (we) would like to make you aware of several of my (our) concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

There are also schools and a park in this area

Re: Draft Air Permit No# 0571279-001-AC  
Florida Gas Transmission Co.  
Hillsborough Compressor Station Co No 27  
Docket No. CP00-40-000,-001, and -002

To Whom It May Concern:

I am writing this letter in regards to the proposed site on C.R. 579 for the location of Florida Gas Transmission Co. for the building of a Compressor Station. I live within one mile of this proposed site. My concern is for all the surrounding residences in this area regarding the pollution and how this will affect our clean air environment. I also understand this facility will operate at a noise level about half as loud as a jet airplane on take off, which will be continuous for 24 hours a day.

Please take notice that several schools are in the vicinity of this proposed building site, and the homes, which are in a 1,000 feet of this complex. If this process is going to take place we would like the EPA to consider the highest level of protection for all residences, schools, and daycares in this area.

I am **opposing** the building of this station, until I know that everything is being done to provide our neighborhoods with the utmost consideration of our protection, which is provide by the EPA.

Our entire community has held a total of three meetings regarding our concerns with this proposed site. I believe 100% opposed the building of this station and they felt like the EPA held the lowest standard for this station.

God willing you will receive many other letters such as this one, in regards to the strict standards we wish to see. Thank you for your consideration of this matter.

Respectfully,

*Wiane Dupont*

Re: Draft Air Permit NO. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27  
Phase V Modification Project

We are residents of Thonotosassa and own three adjacent parcels of land on Less Traveled Road in Thonotosassa, Florida. We live at 10315 Less Traveled Road. At the nearest point, our property is approximately 180 feet from the proposed Compressor Station 27 property on CR 579.

As such, by our close proximity to this site, we have substantial interests that will be affected by the State of Florida, Department of Environmental Protection's proposed intent to issue an Air Construction Permit to Florida Gas Transmission Company. The noise and air pollution generated at this proposed compressor station will impact us immeasurably and cause our property resale value to diminish.

We received notice of the Department's intent to issue Air Construction Permit through the Legal Notice in the classified section of the Tampa Tribune Tuesday, March 12, 2002.

We maintain that this site on CR 579 is not the original site proposed by Florida Gas Transmission Company for construction of Compressor Station No. 27 and therefore parameters relevant to this site have not been considered. Property owners whose substantial interests are affected by this proposed site were not given proper notice or time to respond to this complicated matter.

The plot plan filed by Florida Gas Transmission Company for the Application for Air Construction Permit No. 0571279-001-AC is not a plot plan for the site on CR 579 and therefore is a misrepresentation of fact.

The topography of the site on CR 579 differs significantly from the original proposed Compressor Station 27 site. The site on CR 579 has a low elevation of approximately 55 feet and a high elevation of approximately 115 feet. Directly to the west across CR 579 the land has an elevation of approximately 140 feet, the highest elevation in Hillsborough County.

RECEIVED

MAR 27 2002

On Table 2-1 (Proposed Compressor Engine 2701/2702 Specifications and Stack Parameters) a copy enclosed, the height of the stacks is to be 61.17 feet. Without a proper plot plan for this site, it would be impossible to determine if such a height is adequate to disperse pollutants and heat generated by this facility. In fact the unusual topography may concentrate pollutants and heat in certain pockets and directions. This ill effect may be heightened during the winter and spring months when dense fogs roll northward from the highest points of land toward our property and blanket us and the town, at times until late morning hours.

The prevailing winds for many months of the year are from a south to southwesterly direction, which would cause the pollutants, generated from this site to flow in the direction of our home and property. In fact the most populated areas of our town are within a mile of this site and downwind from the proposed facility.

Florida Gas Transmission states that the proposed site on CR 579 is "near the city of Thonotosassa". Thonotosassa is a rural town. This site is in close proximity to the heart of our town. It is less than ½ mile from Thonotosassa Park, a County Park which contains much used facilities for football, baseball, softball, little league, soccer, basketball and cheerleading. Also the park has picnic pavilions, outdoor playground equipment, walking paths and a community center which has a children's daycare. This proposed compressor site is approximately ¾ mile from Thonotosassa Elementary School, which is adjacent to the park. The proposed compressor station property is about ¾ mile from our Post Office and Public Library.

Lake Thonotosassa is about a mile to the northeast from this proposed compressor station property and is in the direction of the prevailing wind flow. This lake is environmentally sensitive and is a year round community and recreational jewel.

Furthermore, we contend that the pressure of the gas at this site will be detrimental to the safety of this area.

We urge the State of Florida Department of Environmental Protection to deny the Air Construction Permit for this proposed Compressor Station 27 site on CR 579. This sudden change of location brings the proposed Compressor Station 27 site close to the central core of our town without regard for the topography of the proposed site. The proximity to our elementary school, County Park and recreational facilities, public library and the densest concentration of homes will condemn the heart of our town and residents without compensation.

Re: DRAFT AIR PERMIT NUMBER 0571279-001-AC  
FLORIDA GAS TRANSMISSION COMPANY  
HILLSBOROUGH COMPRESSOR STATION NUMBER 27

Dear Sir:

I was born on land that is near the proposed site for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida and I still live on that land at 72 years old.

The proposed site on County Road 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile of the site and would be adversely affected by noise and other pollutants that is sure to be generated by this facility.

There are other sites near the proposed site that would be more suitable with less negative impact to as many homes. My choice choice is on Taylor Road, South of Pruett Road, Seffner, FL.

Please consider the fact that most of the residents have lived here for two or more generations or they have been here 25 to 40 or more years. I ask that you consider the negative impact that this Gas Transmission Station would have on our environment and direct Florida Gas to use my choice or another alternative.

Re: DRAFT AIR PERMIT NUMBER 0571279-001-AC  
FLORIDA GAS TRANSMISSION COMPANY  
HILLSBOROUGH COMPRESSOR STATION NUMBER 27

Dear Sir:

This letter is to inform you that the Thonotosassa, Seffner, Mango Civic Association, Inc. was chartered in 1961 to encompass the Thonotosassa, Seffner and part of Mango areas. Many of our members live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, Florida.

The proposed site on County Road 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile of the site and would be adversely affected by noise and other pollutants that is sure to be generated by this facility.

There are other sites within 1/4 to one mile that would be more suitable with less negative impact to as many homes. Our first choice is on Taylor Road, South of Pruett Road, Seffner, FL. Our second choice is on the Eastside of C.R. 579 directly beside the Northside of American Borrow Pit at Joe Ebert Road, Thonotosassa, Florida.

We ask that you consider the fact that most of the residents have lived here for two or more generations or they have been here 20, 30 or more years, therefore, we urge you the negative impact that this Gas Transmission Station would have on our environment and direct Florida Gas to use one of our choices instead.

RE: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station #27

BUREAU OF AIR REGULATION

Dear Sir and Madam:

We have just learned of the above referenced Gas Company facility that has been proposed for construction on County Road 579 in Thonotosassa. While we understand that neighbors within 1000 feet were notified, as per the law, there are many other concerned neighbors, schools, churches and plant farms around that were not notified. We do not feel that proper notification was given to the community to allow for public opinion to be known concerning a plant such as this. We understand that it will generate a lot of noise and that it will put many pollutants into the air.

I (we) would like to make you aware of several of my (our) concerns related to this proposed building site. Within two miles of this proposed facility are two of our area elementary schools providing education facilities for children. These children live near the schools as well which puts them in the area affected by the pollution of this plant 24 hours a day, seven days a week. Several citrus groves are within a mile of the proposed site as are several plant nurseries. The workers of these facilities work out doors year round exposing them to the pollutants as well. Lake Thonotosassa, the largest recreation/fishing lake in central Hillsborough County is less than two miles from the CR 579 site. The damage to the lake, and thus to the recreation/economy of this area, that could result from the pollution fallout from this facility is potentially enormous. The 61 tons of Carbon Monoxide and 16 tons of Sulphur Dioxide the plant would emit annually would primarily come down within miles of this facility. This could well have a devastating effect on the quality of life in the Thonotosassa area. The noise pollution generated by the two Rolls Royce Jet engines running twenty four hours a day would in and of itself definitely ruin the tranquil, rural atmosphere of CR 579 and surrounding area.

A decision of this magnitude must not be made without proper notification of all those potentially affected. We would like to ask you to please take another look at this proposed site. Please consider the whole community, including the children, businesses, and homeowners that this proposed facility would affect.

Thank you for your time in reading this letter and any consideration you can give to our concerns.

Sincerely,

Department of Environmental Protection

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

BUREAU OF AIR REGULATION

To All Concerned Parties,

This letter is to advise your agency of our strong opposition and concern regarding the Florida Gas Transmission Compressor Station #27 located in Hillsborough County on C.R. 579 in Thonotosassa, Fl.

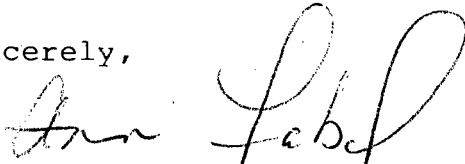

For the record, Thonotosassa is not a city, but a quiet rural community that is home to thousands of residents. The proposed site on C.R. 579 is the highest elevation in Hillsborough County and any noise or other pollutants generated by the facility would permeate over the community in all directions.

The two and one half year ongoing Hillsborough County mandated Thonotosassa Community Based Plan, has designated this area that lies within the heart of Thonotosassa as residential with no commercial or industrial uses. This project would have a permanently negative impact on all future development in the community, leaving its footprint to forever change the face of our future from one of quiet, desirable residential to one of undesirable commercial and industrial uses.

In our opinion, there are more suitable sites within the existing corridor that would have a less negative impact and negate future arbitration caused by incompatibility between the compression station and nearby residents.

We therefore ask that you direct Florida Gas Transmission Company to find an alternative site.

Sincerely,

Ann Fabel, Vice President

Greater Thonotosassa Civic Association

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

To Whom It May Concern:

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, Florida.

The proposed site on C.R. 579 is the highest elevation in Hillsborough County and is in close proximity to our residential community. Hundreds of families live within a ½ mile area. Also within a few miles, we have several schools, a ballpark and recreation center and a plant/flower nursery. Noise and other pollutants that would be generated by this facility would adversely affect all life in this area. Also within a few miles is the largest lake in Hillsborough County: Lake Thonotosassa.

In my opinion, there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Co.  
Hillsborough Compressor Station No. 27

TO WHOM IT MAY CONCERN:

We live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, FL.

The proposed site on County Route 579 is the highest elevation in Hillsborough County, and is in close proximity to the residential community. Hundreds of families live within one-half mile, and there are two elementary schools, as well as several parks and playgrounds that would be adversely affected by the noise and air pollution that would be generated by this proposed facility.

In our opinion, there are other sites within the corridor that would be more suitable. We strongly urge you to consider our quality of life, and the grossly negative impact that this compressor station would have on the environment, and direct Florida Gas to pursue an alternative site.

RE: Draft air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

TO WHOM IT MAY CONCERN:

I live near the proposed location for the Florida Gas Transmission Compression Station No. 27 in Thonotosassa, Florida.

The proposed site on C.R. 579 is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within ½ mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion, there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment, that you direct Florida Gas to pursue an alternative site.

Hillsborough Compressor Station No. 27

I live near the proposed location for the  
Florida Gas Transmission Compression Station 27  
in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest  
elevation in Hillsborough County and is in close  
proximity to the residential community. Hundreds  
of families live within 1/2 mile and would be  
adversely affected by noise and other pollutants  
that would be generated by this facility.

In my opinion there are other sites within  
the corridor that would be more suitable. I ask  
that you consider our quality of life and the  
negative impact this would have on the environment  
and direct Florida Gas to persue an alternative  
site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to persue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

Re: Draft Air Permit No. 0571279-001-AC  
Florida Gas Transmission Company  
Hillsborough Compressor Station No. 27

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa Florida.

The proposed site on C.R. 579, is the highest elevation in Hillsborough County and is in close proximity to the residential community. Hundreds of families live within 1/2 mile and would be adversely affected by noise and other pollutants that would be generated by this facility.

In my opinion there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

To Whom It May Concern:

I live near the proposed location for the Florida Gas Transmission Compression Station 27 in Thonotosassa, Florida.

The proposed site on C.R. 579 is the highest elevation in Hillsborough County and is in close proximity to our residential community. Hundreds of families live within a 1/2 mile area. Also within a few miles, we have several schools, a ballpark and recreation center and a plant/flower nursery. Noise and other pollutants that would be generated by this facility would adversely affect all life in this area. Also within a few miles is the largest lake in Hillsborough County: Lake Thonotosassa.

In my opinion, there are other sites within the corridor that would be more suitable. I ask that you consider our quality of life and the negative impact this would have on the environment and direct Florida Gas to pursue an alternative site.

Sincerely,

*Thomas R Vencer*
