---

**Barbara** - Attached are signed documents for the above referenced Title V permit renewal. It can be clerked and issued. The permit summary page has been done.

**Jeff** – This is the first Title V renewal done for a landfill in Tallahassee. The project took some in-depth analysis of the Subpart WWW requirements and what applies to this facility. Ed did a commendable job in easing the burden on the applicant compared to their previous Title V permit. The applicant had voluntarily installed a gas collection system along with a flare for odor control, even though the NMOC threshold of 50 Mg/yr for installing collection and control system was not reached. Therefore, all the reporting and record keeping requirements of WWW were not required for their gas collection and control system. This simplified the Title V permit when compared to the previous one which wrongly included Cc requirements pertaining to gas collection and control system.

**Ed** – Good job. Please replace all the word documents in your folder with the ones attached with this email.

Thanks,  
Syed
