SUBJECT:

Preliminary Determination - Orlando Utilities Commission Stanton Energy Center Units I and 2

(PSD-FL-084)

As you requested, we are setting forth our verbal comments to Clair Fancy on the above referenced subject.

1. Page 30 - the Coal Stacking Spray is to be operating at all times. The proposed operation limit was 10%. OUC expressed doubts that they could meet 10% and wanted 20%. We finally agreed that under the condition that the spray was operating at its rated efficiency, the limit would be no greater than 20%.

We alerted OUC of the real world situation when their men would turn the scrubbers off or let it fall into a state of dispair and quote the fact that they have a 20% limit.

Mr. Bill Shoup agrees that the up to 20% capacity limit would be based on the spray operating and doing its best.

- 2. Page 30 the pH alarm should sound when the level <u>rises above</u> not <u>falls below</u> the scrubber water standard. If the water became more basic than the SO<sub>2</sub> it is not being removed if the water is becoming more acidic. The SO<sub>2</sub> is becoming H<sub>2</sub>SO<sub>4</sub> and everything is O.K.
- 3. Under General Conditions The District Manager must be notified at once by telephone, then notified in writing, no later than four (4) days after the beginning of any non-compliance. We must know this to visit the site and we may choose to run air monitoring equipment and it is imperative that we are fully informed to handle calls from the public and the news media.

Should we be of further assistance, please let us know.
