## GENERAL

We are requesting replacement of the existing Title V Permit with one complying with 62-210.340 FAC. The Citrusuco processes up to 32,000,000 boxes of citrus fruit per season. Products include concentrate, NFC, juice blends, animal feed, and essential citrus oils. The facility was expanded in 2000 to its present capacity.

The facility process approximately 150,000 boxes per day of oranges and/or grapefruit over a 220 day operating season. The primary product is single strength (not from concentrate) juice with a secondary product of concentrated juice. Cold storage facilities are used to store single strength, concentrate, pulp, and essential oils for year round use. Off season, normally July through October, processing includes blending of products for clients, bulk sales, and packaging.

## EQUIPMENT

### BOILERS

800 Hp Johnston Boiler #1  
1000 Hp Johnston Boiler #2  
2000 Hp Johnston Boiler #3  
125 Hp Johnston Boiler #4

Boilers are natural gas fired with 0.5% S #4 oil as standby if the natural gas supply is interrupted. Steam is used, primarily, for the juice evaporators and pasteurization. During the fresh fruit season the boilers are cycled up as needed. During the off season the small (125 Hp) boiler is the primary boiler.

### FEEDMILL

2 @ 50 tph (press cake rate) peel dryers  
2 @ 24 tph pellet coolers  
3 wasteheat evaporators (60,000 #/hr, 110,000 #/hr, and 120,000 #/hr)

Wet peel from the juice extractors is pumped to a reaction tank at the feedmill. After the addition of lime the peel is dewatered in presses prior to drying. The pressed peel is distributed to either of the two (2) dryers. The dried peel is pelletized and cooled prior to storage. The two (2) coolers exhaust thru cyclones to roof vents. The hot exhaust from the dryers is distributed to three (3) wasteheat evaporators and is scrubbed prior to discharge.
