Mr. Clair Fancy, P.E., Deputy Chief Bureau of Air Quality Management F.D.E.R. Twin Towers Office Building 2600 Blair Stone Road Tallahassee, Florida 32301-8241

Dear Mr. Fancy:

The increase in sulfuric acid production which Royster Company is contemplating with the planned revisions will not significantly change the processing of  $P_2O_5$  in the phosphoric acid plant. Attached are data and calculations which illustrate this.

Royster has purchased supplemental sulfuric acid for P205 processing at varying quantities in past years. Market requirements have most generally controlled the requirement, however, sulfuric acid plant performance has in some cases been the controlling factor. As can be seen from the data and calculations there will not be a requirement for PSD review since emissions from the phosphoric acid plant will not increase by 3TPY.

The modifications planned for the phosphoric acid plant are not to increase production of  $P_2O_5$  but to conserve steam. The modification is to convert the plant from a Prayon dihydrate to a Fisions hemi-hydrate type plant with approximately the same or even less potential  $P_2O_5$  processing capacity. Essentially this is to be accomplished with existing equipment rearranged in flow lines and by changing the plant process control parameters of concentrations and temperature.

The only new equipment planned that would require permitting is an additional attack section scrubber. Design of this scrubber by the engineering/construct firm has at this time not been accomplished. As a matter of fact there has not been a contractual commitment made for the plant conversion. The design is to be based on the new source standards for phosphoric acid plants. As soon as we have the scrubber design, an application for a Permit to Construct will be submitted.

If you have further questions or need clarification of any of the data presented please contact me.

Very truly yours,

T. R. Schmalz, P.E.

Manager of Engineering and
Environmental Services

#### STATE OF FLORIDA

### DEPARTMENT OF ENVIRONMENTAL REGULATION

TWIN TOWERS OFFICE BUILDING 2600 BLAIR STONE ROAD TALLAHASSEE, FLORIDA 32301-8241

BOB GRAHAM GOVERNOR VICTORIA J. TSCHINKEL SECRETARY

Mr. T. R. Schmalz Royster Company Post Office Drawer 797 Mulberry, Florida 33860

Dear Mr. Schmalz:

Confirming the June 11 conversation you had with Willard Hanks, the Department believes the proposed modifications to Royster's phosphoric acid plant will require a permit to construct. If the actual emissions of fluoride increase by more than 3 TPY, the source will be subject to Prevention of Significant Deterioration (PSD) regulations. The increased sulfuric acid production from the modified sulfuric acid plant cannot be used in Royster's existing phosphoric acid plant until all permitting requirements are complied with.

We request you send a description of Royster's plans that involve construction or operation of any existing or proposed phosphate plant operation. Include the actual, permitted and proposed emissions of any criteria air pollutants and fluorides from the sources. With this information, the department will be able to tell Royster which units will need construction permits and what air pollution control regulations they will be subject to.

If you have any questions on this matter, please call Willard Hanks at 904/488-1344.

Sincerely,

Clair Fancy, P.E.

Deputy Chief

Bureau of Air Quality

SUBJECT:

Comments on Royster Phosphates, Sulfuric Acid Plant

Expansion Program

Over the past 10 years Royster has increased their original 900 TPD to 1100 TPD  $\rm H_2SO_4$  production. Mr. Thomas is concerned about the effects of the use of this extra  $\rm H_SO_4$  acid. It is to be used to manufacture more phosphoric acid and is this to be used to manufacture more DAP, etc? This could possibly trigger NSR for fluorides on these other activities without their knowledge.

We recommend asking the source about their intentions at this point, and, as Mr. Thomas pointed out, to find out what other expansions of this sort will do such as USS Agricents sulfuric acid production increase.

Mr. C. H. Fancy, P.E., Deputy Chief Bureau of Air Quality Management Florida Department of Environmental Regulation Twin Towers Office Building 2600 Blairstone Road Tallahassee, Florida 32301-8241

Dear Mr. Fancy:

Pursuant to your letter of May 24, 1984 we wish to inform you that Items A. through E. of your letter of May 2, 1984 are to be addressed by the environmental consulting firm of Sholtes and Koogler with whom you are acquainted.

In the meanwhile in order to expedite our field construction schedule which requires commencement this summer we would request that some form of permission to proceed with construction be issued by the D.E.R. This could be as a Permit to Construct with conditions not to operate at the higher rates until completion of the PSD review or it could be as a letter.

In any event construction work directly on the existing plant would not be performed until that time when all of the new equipment is in place. At that time there will be a plant shut-down with tie-ins made between the existing and new equipment. This tie-in period is scheduled for the summer of 1985 and to be of three-four week duration. In one sense it could be said that no construction work on the existing plant is to be done until that tie-in period to occur a year hence.

Please let me know your position regarding this at your earliest convenience.

Very truly yours

T. R. Schmalz, P.E.

Manager, Engineering & Environmental Services
