RE: CPV Pierce Power Generating Facility
Demineralized Water Tank Height Change
Air Construction Permit 1050349-001-AC (PSD-FL-319)

Dear Mr. Linero:

The intent of this letter is to indicate a proposed modification in the dimensions of the demineralized water tank for the CPV Pierce Power Generating Facility. CPV is notifying the Florida Department of Environmental Protection (FLDEP) of the proposed modification per stipulation of Item 6 in Section II Common Specific Conditions, General and Administrative Requirements of the Air Construction Permit.

CPV is proposing a change in the dimensions of the demineralized water tank resulting in a height decrease from 70 to 48 feet. The tank diameter will remain unchanged. The demineralized water tank is located in between two other storage tanks, the raw water tank and the oil tank.

The proposed decrease in the water tank height should not adversely affect the dispersion modeling results for the Facility. Therefore, the proposed change should not necessitate any change in the air permit.

Please contact me at (781) 848-0253 if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read 'Patricia A. DiOrio', is written over a horizontal line.
