Subject: NOx Analyzer Re-certification – Putnam Plant Unit 2-1 (ORIS code 006246)

Dear Mr. McNeal:

In compliance with the Acid Rain Continuous Emission Monitoring Program (40 CFR Part 75.63), Florida Power & Light Company (FPL) is submitting the Continuous Emissions Monitoring System Re-certification Application for the NOx analyzer replacement on Putnam Unit 2-1. In order to continue to ensure CEMS data integrity and analyzer availability, FPL is currently replacing CEMS NOx and O2 analyzers on thirty-eight units throughout the State.

Putnam Unit 2-1 NOx analyzer, serial number 42C 77259-385 was removed from service on November 21, 2013 and replaced by serial number 1324258460. Re-certification test period requirements and data validation, which includes a probationary calibration error test, in accordance with 40 CFR Part 75.20(b)(3)(ii) were performed to initiate a conditional valid data period.

The re-certification of the NOx System was performed in accordance with 40 CFR Part 75, Appendix A during the period of November 21 – December 23, 2013. Enclosed are the quality assurance audits which include a RATA Report, 7 Day Calibration Error Test, Linearity, and updated Monitoring Plan.

If you have any questions with the attached, please feel free to contact me at (561) 691-2781 or Elisa Ostertag at (561) 691-2341.

I am authorized to make this submission of behalf of the owners and operators of the affected source or affected units for which the submission is made. I certify under penalty of law that I have personally examined, and am familiar with, the statements and information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the statements and information are to the best of my knowledge and belief true, accurate, and complete. TABLE OF CONTENTS

1.0 Introduction

Coastal Air Consulting, Inc. (Coastal) was contracted by Florida Power & Light Company (FPL) to determine the relative accuracy of the Continuous Emissions Monitoring System (CEMS) at the Putnam Power Plant CT 2 - 1 in Palatka, FL. The sampling program was conducted on December 23, 2013. The RATA was performed by Coastal personnel, with the assistance of personnel assigned by the Putnam Plant.

2.0 Test Program Summary

A summary of results developed by this testing program is presented in Table 1.

TABLE 1
Relative Accuracy Summary CT 2 - 1

Parameters	Relative Accuracy	Allowable (Annual)	Bias
NOx (lb/mmBtu)	3.44 %	7.5%	NB

* Low Emitter value = + or – 0.015 lb/mmBtu of the reference value

3.0 Results of Testing

These results indicate that CT 2 - 1 passed the RATA at the time of testing under normal operating conditions.

4.0 Description of Source

FPL Putnam Plant consists of four combustion turbines, each with an associated inlet fogger and heat recovery steam generator equipped with duct burners, an auxiliary boiler and unregulated emissions units. Each combustion turbine is a Westinghouse unit rated at 70 MW generating capacity (at 85 degrees F ambient temperature), with a maximum heat input for natural gas and fuel oil of 968.3 MMBtu/ht and 910.6 MMBtu/hr, respectively. The duct burners for each HRSG are rated at a maximum heat input of 250 MMBtu/hr, and are fired with natural gas and number 2 fuel oil. The auxiliary boiler is manufactured by VA-Power and has a maximum heat input for natural gas and number 2 fuel oil of 16.275 MMBtu/hr and 14.28 MMBtu/hr, respectively.

5.0 Sampling Procedures

EPA testing protocols utilized during this test program include the following;

EPA Method 3A	Gas Analysis for CO_2, O_2, Excess Air and Dry Molecular Weight (Instrumental Analyzer Method)
EPA Method 7E	Determination of Nitrogen Oxides Emissions From Stationary Sources (Instrumental Analyzer Method)

6.0 Operating Conditions

Putnam Plant personnel monitored operating conditions throughout the duration of the sampling program. The combustion turbine CT 2 - 1 was operating at base load during the RATA test runs.

7.0 Quality Assurance Procedures

Quality assurance procedures followed during these testing activities were applied consistent with the requirements outlined by the EPA methods referenced in 40 CFR Parts 60 & 75. Analyzer calibrations, system bias and drift checks were completed before and after each sample run utilizing EPA Protocol 1 calibration

Methods 6c and 7e procedure:
The response time is determined by switching between the zero and the upscale cal gas and noting the longer time it takes to achieve a stable reading.

Method 10 procedure:
The time to achieve 90% response after an increase (rise time) or decrease (fall time) in the inlet concentration.
