Subject: RE: 30-Day RAI Response Period

Thanks Joe.

I acknowledge receipt of the information below. Consistent with your request, we have suspended processing of the application until we receive the mentioned amendments, revisions, and clarifications that you wish to make to your application.

At that point, we will re-evaluate the completeness of the application and advise you within 30-days of receipt.

By the way, Cindy Mulkey will be our technical contact for this application and I will be the P.E. reviewer. Debbie Nelson is our modeling contact.

Thanks.

Al Linero.

Subject: 30-Day RAI Response Period

Trina,

As we discussed in our meeting on June 16th, Sumter Cement Company (SCC) is still finalizing engineering design work for the project in Center Hill.

SCC has continued to work with Polysius in developing this engineering for the plant layout and process flow. SCC is working to update the application and in particular the modeling with this final version of the engineering. We hope to have this information to you and your staff by the end of the month. However, in the mean time SCC would request the 30-day period for RAI response be waved until SCC submits this supplemental information here shortly. Upon receipt of this information the Department can start a new 30-day review period for additional questions.

I have attached such a request and a hard copy will follow in the mail. I thought this made the most since and the Department can review and issue additional questions upon receiving and reviewing this supplemental information.

Please let me know if you have any questions or if there is anything SCC can do to help in this process.

Thanks,
Joe Horton
