APPENDIX 10.1

FEDERAL PERMIT APPLICATIONS OR APPROVALS

APPENDIX 10.1.1

316 DEMONSTRATIONS

10.1.1 316 A AND B DEMONSTRATIONS (EPA NPDES PERMIT INCLUDED)

Biological studies were performed to support the original permit. These studies are discussed in Section 2.3.6 under Aquatic Ecology. From these studies and EPA field inspection, it was concluded that a 316(a) thermal variance was not required because the Florida Water Quality Standards were not violated and the intake structure reflects best available technology to minimize impacts. Additional aquatic ecology studies were performed to supplement the previous studies. The results of these investigations support the conclusion of the original EPA permit (see Sections 2.3.6 and 5.1.2). The EPA NPDES permit is included in the appendix.

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

RECEIVED

APR 0 6 1987

MANAGER
PERMITTING & PROGRAMS

REF: 4WM-FP

Mr. T.R. Fair
Environmental Permitting and Programs
Florida Power and Light Company
P.O. Box 14000
Juno Beach, Florida 33408

RE: Florida Power and Light Company
Lauderdale Power Plant
NPDES No. FL0001503

Dear Mr. Fair:

Enclosed is the National Pollutant Discharge Elimination System (NPDES) permit for the above referenced facility. This action constitutes the Environmental Protection Agency's final permit decision in accordance with 40 CFR 124.15(a). Any person may contest this decision by submitting a timely request for a hearing to the Regional Administrator under 40 CFR 124.74 or 124.114.

The permit will be effective as specified in the permit, provided that no request for a hearing is granted by the Agency under 40 C.F.R. 124.75 or 124.114. In the event that such a request is granted:

- For discharge(s) authorized by an NPDES permit, at the time this permit application was filed, the force and effect of the contested provision(s) of this permit will be stayed, and all provision(s) of the previous NPDES permit as well as all uncontested provision(s) of this permit shall be fully enforceable and effective until the administrative review process is completed, as provided by 40 CFR 124.16 and 124.60.

- For discharge(s) not authorized by an NPDES permit, at the time this permit application was filed, the Agency's granting of a hearing (requested by you or any other person) will result in a withdrawl of your authorization to commence such discharge(s) until the administrative review process is completed. In other words, there will not be an NPDES permit authorizing the discharge(s) and if such a discharge(s) occurs, the discarge(s) will constitute a violation of Section 301 of the Clean Water Act, (33 U.S.C. 1311) for which there is civil and/or criminal liability.

If you wish to request a hearing under 40 CFR 124.74 or 124.114 you must submit a request (an original and two copies) to the Regional Hearing Clerk within thirty (30) days from the receipt of this letter. The request will be timely if mailed by certified mail within the thirty (30) day time period. For the request to be valid, it must conform to the requirements of 40 CFR 124.74. A copy of the requirements of 40 CFR 124.74 is attached.

Information on procedures pertaining to the filing of a hearing request or other legal matters may be obtained by contacting Ms. Jacqueline Colson, Assistant Regional Counsel, at (404) 347-3506.

Sincerely yours,

Bruce R. Barrett, Director
Water Management Division

ATLANTA, GEORGIA 30365

AUTHORIZATION TO DISCHARGE UNDER THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the Clean Water Act, as amended (33 U.S.C. 1251 et. seq; the "Act"),

Florida Power and Light Company
P.O. Box 14000
Juno Beach, Florida 33408

is authorized to discharge from a facility located at

Lauderdale Plant
SW 42 St., 2 miles West off Ravenswood
Fort Lauderdale, Florida 33314

to receiving waters named

Dania Cutoff Canal & South Fork New River (after cooling canal/pond residence)

in accordance with effluent limitations, monitoring requirements and other conditions set forth herein. The permit consists of this cover sheet, Part I 2 page(s), Part II 15 page(s), Part III 1 page(s), Attachments 1 and 2.

This permit shall become effective on May 1, 1987.

This permit and the authorization to discharge shall expire at midnight April 30, 1992.

March 31, 1987
Date Signed

Bruce P. Barrett, Director
Water Management Division

A. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

1. During the period beginning on the effective date of this permit and lasting through expiration of this permit, the permittee is authorized to discharge from outfall(s) serial number(s) 001 - Combined discharge of once through cooling water from Unit No. 4 and 5 and auxiliary equipment cooling water to South Fork of New River (after cooling canal/pond residence).

Such discharges shall be limited and monitored by the permittee as specified below:

Effluent Characteristic	Discharge Limitations		Monitoring Requirements	
	30 Day Average	Instantaneous Maximum	Measurement Frequency	Sample Type
Flow, m^3/day (MGD)	-	-	Daily	Recorder or pump logs
Discharge Temperature, $^oC(^oF)$	-	N/A	Daily	Plant records
Intake Temperature, $^oC(^oF)$	-	N/A	Daily	Plant records
Temperature Rise, $^oC(^oF)$	7.3(13.2)	N/A	6/Day	Recorders or Indicators

10.1.1-5

There shall be no discharge of free available chlorine nor total residual chlorine.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

Samples taken in compliance with the monitoring requirements specified above shall be taken at the outlet corresponding to an individual unit prior to mixing with other waste streams.

2. During the period beginning on the effective date of this permit and lasting through expiration of this permit, the permittee is authorized to discharge from outfall serial number 004 - intake screen wash water to Dania Cut-off Canal.

Discharge of intake screen wash water is permitted without limitations or monitoring requirements.

There shall be no discharge of floating solids or visible foam in other than trace amounts.

3. During the period beginning on the effective date of this permit and lasting through expiration of this permit, the permittee is authorized to discharge from outfall(s) serial number(s) 005 - 1 thru 8 - Non-equipment area stormwater runoff to Dania Cut-off Canal and South Fork of New River (after cooling canal/pond residence).

   Discharge of stormwater runoff is permitted without limitations or monitoring requirements.

   There shall be no discharge of floating solids or visible foam in other than trace amounts.

B. SCHEDULE OF COMPLIANCE

1. The permittee shall achieve compliance with the effluent limitations specified for discharges in accordance with the following schedule:

   Operational Level Attained.....Effective Date of Permit

2. No later than 14 calendar days following a date identified in the above schedule of compliance, the permittee shall submit either a report of progress or, in the case of specific actions being required by identified dates, a written notice of compliance or noncompliance. In the latter case, the notice shall include the cause of noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement.

PART II

STANDARD CONDITIONS FOR NPDES PERMITS

SECTION A. GENERAL CONDITIONS

1. Duty to Comply

The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

2. Penalties for Violations of Permit Conditions

Any person who violates a permit condition is subject to a civil penalty not to exceed $10,000 per day of such violation. Any person who willfully or negligently violates permit conditions is subject to a fine of not less than $2,500 nor more than $25,000 per day of violation, or by imprisonment for not more than 1 year, or both.

3. Duty to Mitigate

The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

4. Permit Modification

After notice and opportunity for a hearing, this permit may be modified, terminated or revoked for cause (as described in 40 CFR 122.62 et seq) including, but not limited to, the following:

a. Violation of any terms or conditions of this permit;

b. Obtaining this permit by misrepresentation or failure to disclose fully all relevant facts;

c. A change in any conditions that requires either temporary interruption or elimination of the permitted discharge; or

d. Information newly acquired by the Agency indicating the discharge poses a threat to human health or welfare.

If the permittee believes that any past or planned activity would be cause for modification or revocation and reissuance under 40 CFR 122.62, the permittee must report such information to the Permit Issuing Authority. The submittal of a new application may be required of the permittee. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

5. Toxic Pollutants

Notwithstanding Paragraph A-4, above, if a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under Section 307(a) of the Act for a toxic pollutant which is present in the discharge and such standard or prohibition is more stringent than any limitation for such pollutant in this permit, this permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition and the permittee so notified.

The permittee shall comply with effluent standards or prohibitions established under Section 307(a) of the Clean Water Act for toxic pollutants within the time provided in the regulations that establish those standards or prohibitions, even if the permit has not yet been modified to incorporate the requirement.

6. Civil and Criminal Liability

Except as provided in permit conditions on "Bypassing" Section B, Paragraph B-3, nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance.

7. Oil and Hazardous Substance Liability

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject under Section 311 of the Act.

8. State Laws

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority preserved by Section 510 of the Act.

9. Property Rights

The issuance of this permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

10. Onshore or Offshore Construction

This permit does not authorize or approve the construction of any onshore or offshore physical structures or facilities or the undertaking of any work in any waters of the United States.

11. Severability

The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

12. Duty to Provide Information

The permittee shall furnish to the Permit Issuing Authority, within a reasonable time, any information which the Permit Issuing Authority may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit. The permittee shall also furnish to the Permit Issuing Authority upon request, copies of records required to be kept by this permit.

SECTION B. OPERATION AND MAINTENANCE OF POLLUTION CONTROLS

1. Proper Operation and Maintenance

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

2. Need to Halt or Reduce not a Defense

It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the condition of this permit.

3. Bypass of Treatment Facilities

a. Definitions

(1) "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility, which is not a designed or established operating mode for the facility.

(2) "Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

b. Bypass not exceeding limitations.

The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of Paragraphs c. and d. of this section.

c. Notice

(1) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass; including an evaluation of the anticipated quality and effect of the bypass.

(2) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in Section D, Paragraph D-8 (24-hour notice).

d. Prohibition of bypass.

(1) Bypass is prohibited and the Permit Issuing Authority may take enforcement action against a permittee for bypass, unless:

(a) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(b) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(c) The permittee submitted notices as required under Paragraph c. of this section.

(2) The Permit Issuing Authority may approve an anticipated bypass, after considering its adverse effects, if the Permit Issuing Authority determines that it will meet the three conditions listed above in Paragraph d.(1) of this section.

4. Upsets

"Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. An upset constitutes an affirmative defense to an action brought for non-compliance with such technology based permit limitation if the requirements of 40 CFR 122.41(n)(3) are met.

5. Removed Substances

This permit does not authorize discharge of solids, sludge, filter backwash, or other pollutants removed in the course of treatment or control of wastewaters to waters of the United States unless specifically limited in Part 1.

SECTION C. MONITORING AND RECORDS

1. Representative Sampling

Samples and measurements taken as required herein shall be representative of the volume and nature of the monitored discharge. All samples shall be taken at the monitoring points specified in this permit and, unless otherwise specified, before the effluent joins or is diluted by any other wastestream, body of water, or substance. Monitoring points shall not be changed without notification to and the approval of the Permit Issuing Authority.

2. Flow Measurements

Appropriate flow measurement devices and methods consistent with accepted scientific practices shall be selected and used to insure the accuracy and reliability of measurements of the volume of monitored discharges. The devices shall be installed, calibrated and maintained to insure that the accuracy of the measurements are consistent with the accepted capability of that type of device. Devices selected shall be capable of measuring flows with a maximum deviation of less than $\pm$ 10% from the true discharge rates throughout the range of expected discharge volumes. Once-through condenser cooling water flow which is monitored by pump logs, or pump hour meters as specified in Part I of this permit and based on the manufacturer's pump curves shall not be subject to this requirement. Guidance in selection, installation, calibration and operation of acceptable flow measurement devices can be obtained from the following references:

1. "A Guide of Methods and Standards for the Measurement of Water Flow", U.S. Department of Commerce, National Bureau of Standards, NBS Special Publication 421, May 1975, 97 pp. (Available from the U.S. Government Printing Office, Washington, D.C. 20402. Order by SD catalog No. C13.10:421.)

2. "Water Measurement Manual", U.S. Department of Interior, Bureau of Reclamation, Second Edition, Revised Reprint, 1974, 327 pp. (Available from the U.S. Government Printing Office, Washington, D.C. 20402. Order by catalog No. 127.19/2:W29/2, Stock No. S/N 24003-0027.)

(3) "Flow Measurement in Open Channels and Closed Conduits", U.S. Department of Commerce, National Bureau of Standards, NBS Special Publication 484, October 1977, 982 pp. (Available in paper copy or microfiche from National Technical Information Service (NTIS), Springfield, VA 22151. Order by NTIS No. PB-273 535/5ST.)

(4) "NPDES Compliance Flow Measurement Manual", U.S. Environmental Protection Agency, Office of Water Enforcement, Publication MCD-77, September 1981, 135 pp. (Available from the General Services Administration (8BRC), Centralized Mailing Lists Services, Building 41, Denver Federal Center, Denver, CO 80225.)

3. Monitoring Procedures

Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit.

4. Penalties for Tampering

The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate, any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

5. Retention of Records

The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by the Permit Issuing Authority at any time.

6. Record Contents

Records of monitoring information shall include:

a. The date, exact place, and time of sampling or measurements;

b. The individual(s) who performed the sampling or measurements;

c. The date(s) analyses were performed;

d. The individual(s) who performed the analyses;

e. The analytical techniques or methods used; and

f. The results of such analyses.

7. Inspection and Entry

The permittee shall allow the Permit Issuing Authority, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

c. Inspect at reasonable time any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

SECTION D. REPORTING REQUIREMENTS

1. Change in Discharge

The permittee shall give notice to the Permit Issuing Authority as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required only when:

a. The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source; or

b. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under Section D, Paragraph D-10(a).

2. Anticipated Noncompliance

The permittee shall give advance notice to the Permit Issuing Authority of any planned change in the permitted facility or activity which may result in noncompliance with permit requirements. Any maintenance of facilities, which might necessitate unavoidable interruption of operation and degradation of effluent quality, shall be scheduled during noncritical water quality periods and carried out in a manner approved by the Permit Issuing Authority.

3. Transfer of Ownership or Control

A permit may be automatically transferred to another party if:

a. The permittee notifies the Permit Issuing Authority of the proposed transfer at least 30 days in advance of the proposed transfer date;

b. The notice includes a written agreement between the existing and new permittees containing a specific date for transfer of permit responsibility, coverage, and liability between them; and

c. The Permit Issuing Authority does not notify the existing permittee of his or her intent to modify or revoke and reissue the permit. If this notice is not received, the transfer is effective on the date specified in the agreement mentioned in paragraph b.

4. Monitoring Reports

See Part III of this permit.

5. Additional Monitoring by the Permittee

If the permittee monitors any pollutant more frequently than required by this permit, using test procedures approved under 40 CFR 136 or as specified in this permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the Discharge Monitoring Report (DMR). Such increased frequency shall also be indicated.

6. Averaging of Measurements

Calculations for limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Permit Issuing Authority in the permit.

7. Compliance Schedules

Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date. Any reports of noncompliance shall include the cause of noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement.

8. Twenty-Four Hour Reporting

The permittee shall orally report any noncompliance which may endanger health or the environment, within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance, including exact dates and times; and if the noncompliance has not been corrected, the anticipated time it is expected to continue, and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. The Permit Issuing Authority may verbally waive the written report, on a case-by-case basis, when the oral report is made.

The following violations shall be included in the 24 hour report when they might endanger health or the environment:

a. An unanticipated bypass which exceeds any effluent limitation in the permit.

b. Any upset which exceeds any effluent limitation in the permit.

9. Other Noncompliance

The permittee shall report in narrative form, all instances of noncompliance not previously reported under Section D, Paragraphs D-2, D-4, D-7, and D-8 at the time monitoring reports are submitted. The reports shall contain the information listed in Paragraph D-8.

10. Changes in Discharges of Toxic Substances

The permittee shall notify the Permit Issuing Authority as soon as it knows or has reason to believe:

a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic substance(s) (listed at 40 CFR 122, Appendix D, Table II and III) which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(1) One hundred micrograms per liter (100 ug/l);

(2) Two hundred micrograms per liter (200 ug/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 ug/l) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter (1 mg/l) for antimony; or

(3) Five (5) times the maximum concentration value reported for that pollutant(s) in the permit application.

b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant (listed at 40 CFR 122, Appendix D. Table II and III) which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(1) Five hundred micrograms per liter (500 ug/l);

(2) One milligram per liter (1 mg/l) for antimony; or

(3) Ten (10) times the maximum concentration value reported for that pollutant(s) in the permit application.

11. Duty to Reapply

If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit. The application should be submitted at least 180 days before the expiration date of this permit. The Permit Issuing Authority may grant permission to submit an application less than 180 days in advance but not later than the permit expiration date.

Where EPA is the Permit Issuing Authority, the terms and conditions of this permit are automatically continued in accordance with 40 CFR 122.6, only where the permittee has submitted a timely and sufficient application for a renewal permit and the Permit Issuing Authority is unable through no fault of the permittee to issue a new permit before the expiration date.

12. Signatory Requirements

All applications, reports, or information submitted to the Permit Issuing Authority shall be signed and certified.

a. All permit applications shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means: (1) a president, secretary, treasurer or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy - or decision-making functions for the corporation, or (2) the manager of one or more manufacturing production or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding 25 million (in second quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official.

b. All reports required by the permit and other information requested by the Permit Issuing Authority shall be signed by a person described above or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above;

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position.); and

(3) The written authorization is submitted to the Permit Issuing Authority.

c. Certification. Any person signing a document under paragraphs (a) or (b) of this section shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under the direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

13. Availability of Reports

Except for data determined to be confidential under 40 CFR Part 2, all reports prepared in accordance with the terms of this permit shall be available for public inspection at the offices of the Permit Issuing Authority. As required by the Act, permit applications, permits and effluent data shall not be considered confidential.

14. Penalties for Falsification of Reports

The Clean Water Act provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

SECTION E. DEFINITIONS

1. Permit Issuing Authority

The Regional Administrator of EPA Region IV or his designee, unless at some time in the future the State receives authority to administer the NPDES program and assumes jurisdiction over the permit; at which time, the Director of the State program receiving authorization becomes the issuing authority.

2. Act

"Act" means the Clean Water Act (formerly referred to as the Federal Water Pollution Control Act) Public Law 92-500, as amended by Public Law 95-217 and Public Law 95-576, 33 U.S.C. 1251 et seq.

3. Mass/Day Measurements

a. The "average monthly discharge" is defined as the total mass of all daily discharges sampled and/or measured during a calendar month on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such month. It is therefore, an arithmetic mean found by adding the weights of the pollutant found each day of the month and then dividing this sum by the number of days the tests were reported. The limitation is identified as "Daily Average" or "Monthly Average" in Part I of the permit and the average monthly discharge value is reported in the " Average" column under "Quantity" on the Discharge Monitoring Report (DMR).

b. The "average weekly discharge" is defined as the total mass of all daily discharges sampled and/or measured during the calendar week on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such week. It is, therefore, an arithmetic mean found by adding the weights of pollutants found each day of the week and then dividing this sum by the number of days the tests were reported. This limitation is identified as "Weekly Average" in Part I of the permit and the average weekly discharge value is reported in the "Maximum" column under "Quantity" on the DMR.

c. The "maximum daily discharge" is the total mass (weight) of a pollutant discharged during a calendar day. If only one sample is taken during any calendar day the weight of pollutant calculated from it is the "maximum daily discharge". This limitation is identified as "Daily Maximum", in Part I of the permit and the highest such value recorded during the reporting period is reported in the "Maximum" column under "Quantity" on the DMR.

d. The "average annual discharge" is defined as the total mass of all daily discharges sampled and/or measured during the calendar year on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such year. It is, therefore, an arithmetic mean found by adding the weights of pollutants found each day of the year and then dividing this sum by the number of days the tests were reported. This limitation is defined as "Annual Average" in Part I of the permit and the average annual discharge value is reported in the "Average" column under "Quantity" on the DMR. The DMR for this report shall be submitted in January for the previous reporting calendar year.

4. Concentration Measurements

a. The "average monthly concentration", other than for fecal coliform bacteria, is the sum of the concentrations of all daily discharges sampled and/or measured during a calendar month on which daily discharges are sampled and measured, divided by the number of daily discharges sampled and/or measured during such month (arithmetic mean of the daily concentration values). The daily concentration value is equal to the concentration of a composite sample or in the case of grab samples is the arithmetic mean (weighted by flow value) of all the samples collected during that calendar day. The average monthly count for fecal coliform bacteria is the geometric mean of the counts for samples collected during a calendar month. This limitation is identified as "Monthly Average" or "Daily Average" under "Other Limits" in Part I of the permit and the average monthly concentration value is reported under the "Average" column under "Quality" on the DMR.

b. The "average weekly concentration", other than for fecal coliform bacteria, is the sum of the concentrations of all daily discharges sampled and/or measured during a calendar week on which daily discharges are sampled and measured divided by the number of daily discharges sampled and/or measured during such week (arithmetic mean of the daily concentration values). The daily concentration value is equal to the concentration of a composite sample or in the case of grab samples is the arithmetic mean (weighted by flow value) of all the samples collected during that calendar day. The average weekly count for fecal coliform bacteria is the geometric mean of the counts for samples collected during a calendar week. This limitation is identified as "Weekly Average" under "Other Limits" in Part I of the permit and the average weekly concentration value is reported under the "Maximum" column under "Quality" on the DMR.

c. The "maximum daily concentration" is the concentration of a pollutant discharge during a calendar day. It is identified as "Daily Maximum" under "Other Limits" in Part I of the permit and the highest such value recorded during the reporting period is reported under the "Maximum" column under "Quality" on the DMR.

d. The "average annual concentration", other than for fecal coliform bacteria, is the sum of the concentrations of all daily discharges sampled and/or measured during a calendar year on which daily discharges are sampled and measured divided by the number of daily discharges sampled and/or measured during such year (arithmetic mean of the daily concentration values). The daily concentration value is equal to the concentration of a composite sample or in the case of grab samples is the arithmetic mean (weighted by flow value) of all the samples collected during that calendar day. The average yearly count for fecal coliform bacteria is the geometric mean of the counts

for samples collected during a calendar year. This limitation is identified as "Annual Average" under "Other Limits" in Part I of the permit and the average annual concentration value is reported under the "Average" column under "Quality" on the DMR. The DMR for this report shall be submitted in January for the previous reporting year.

5. Other Measurements

a. The effluent flow expressed as M^3/day (MGD) is the 24 hour average flow averaged monthly. It is the arithmetic mean of the total daily flows recorded during the calendar month. Where monitoring requirements for flow are specified in Part I of the permit the flow rate values are reported in the "Average" column under "Quantity" on the DMR.

b. An "instantaneous flow measurement" is a measure of flow taken at the time of sampling, when both the sample and flow will be representative of the total discharge.

c. Where monitoring requirements for pH, dissolved oxygen or fecal coliform bacteria are specified in Part I of the permit, the values are generally reported in the "Quality or Concentration" column on the DMR.

6. Types of Samples

a. Composite Sample: A "composite sample" is a combination of not less than 8 influent or effluent portions, of at least 100 ml, collected over the full time period specified in Part I.A. The composite sample must be flow proportioned by either time interval between each aliquot or by volume as it relates to effluent flow at the time of sampling or total flow since collection of the previous aliquot. Aliquots may be collected manually or automatically.

b. Grab Sample: A "grab sample" is a single influent or effluent portion which is not a composite sample. The sample(s) shall be collected at the period(s) most representative of the total discharge.

7. Calculation of Means

a. Arithmetic Mean: The arithmetic mean of any set of values is the summation of the individual values divided by the number of individual values.

b. Geometric Mean: The geometric mean of any set of values is the N^{th} root of the product of the individual values where N is equal to the number of individual values. The geometric mean is equivalent to the antilog of the arithmetic mean of the logarithms of the individual values. For purposes of calculating the geometric mean, values of zero (0) shall be considered to be one (1).

c. Weighted by Flow Value: Weighted by flow value means the summation of each concentration times its respective flow divided by the summation of the respective flows.

8. Calendar Day

A calendar day is defined as the period from midnight of one day until midnight of the next day. However, for purposes of this permit, any consecutive 24-hour period that reasonably represents the calendar day may be used for sampling.

9. Hazardous Substance

A hazardous substance means any substance designated under 40 CFR Part 116 pursuant to Section 311 of the Clean Water Act.

10. Toxic Pollutant

A toxic pollutant is any pollutant listed as toxic under Section 307(a)(1) of the Clean Water Act.

PART III

OTHER REQUIREMENTS

A. Reporting of Monitoring Results

Monitoring results obtained each calendar month must be summarized for that month and reported on a Discharge Monitoring Report Form (EPA No. 3320-1), postmarked no later than the 28th day of the month following the completed calendar month. (For example, data for January shall be submitted by February 28.) Duplicate signed copies of these, and all other reports required by Section D of Part II, Reporting Requirements, shall be submitted to the Permit Issuing Authority and the State at the following addresses:

Environmental Protection Agency
Region IV
Facilities Performance Branch
Water Management Division
345 Courtland Street, N.E.
Atlanta, Georgia 30365

Florida Dept. of Environmental Regulation
Southeast District
3301 Gun Club Road
P.O. Box 3858
W. Palm Beach, Florida 33402

B. There shall be no discharge of polychlorinated biphenyl compounds such as those commonly used for transformer fluid.

C. The company shall notify the Regional Administrator in writing not later than ninety (90) days prior to instituting use of any cooling water biocide or chemical which may be toxic to aquatic life. Such notification shall include:

1. Name and general composition of biocide or chemical.
2. Frequency of use.
3. Quantities used.
4. Proposed effluent concentration.
5. EPA registration number if applicable.

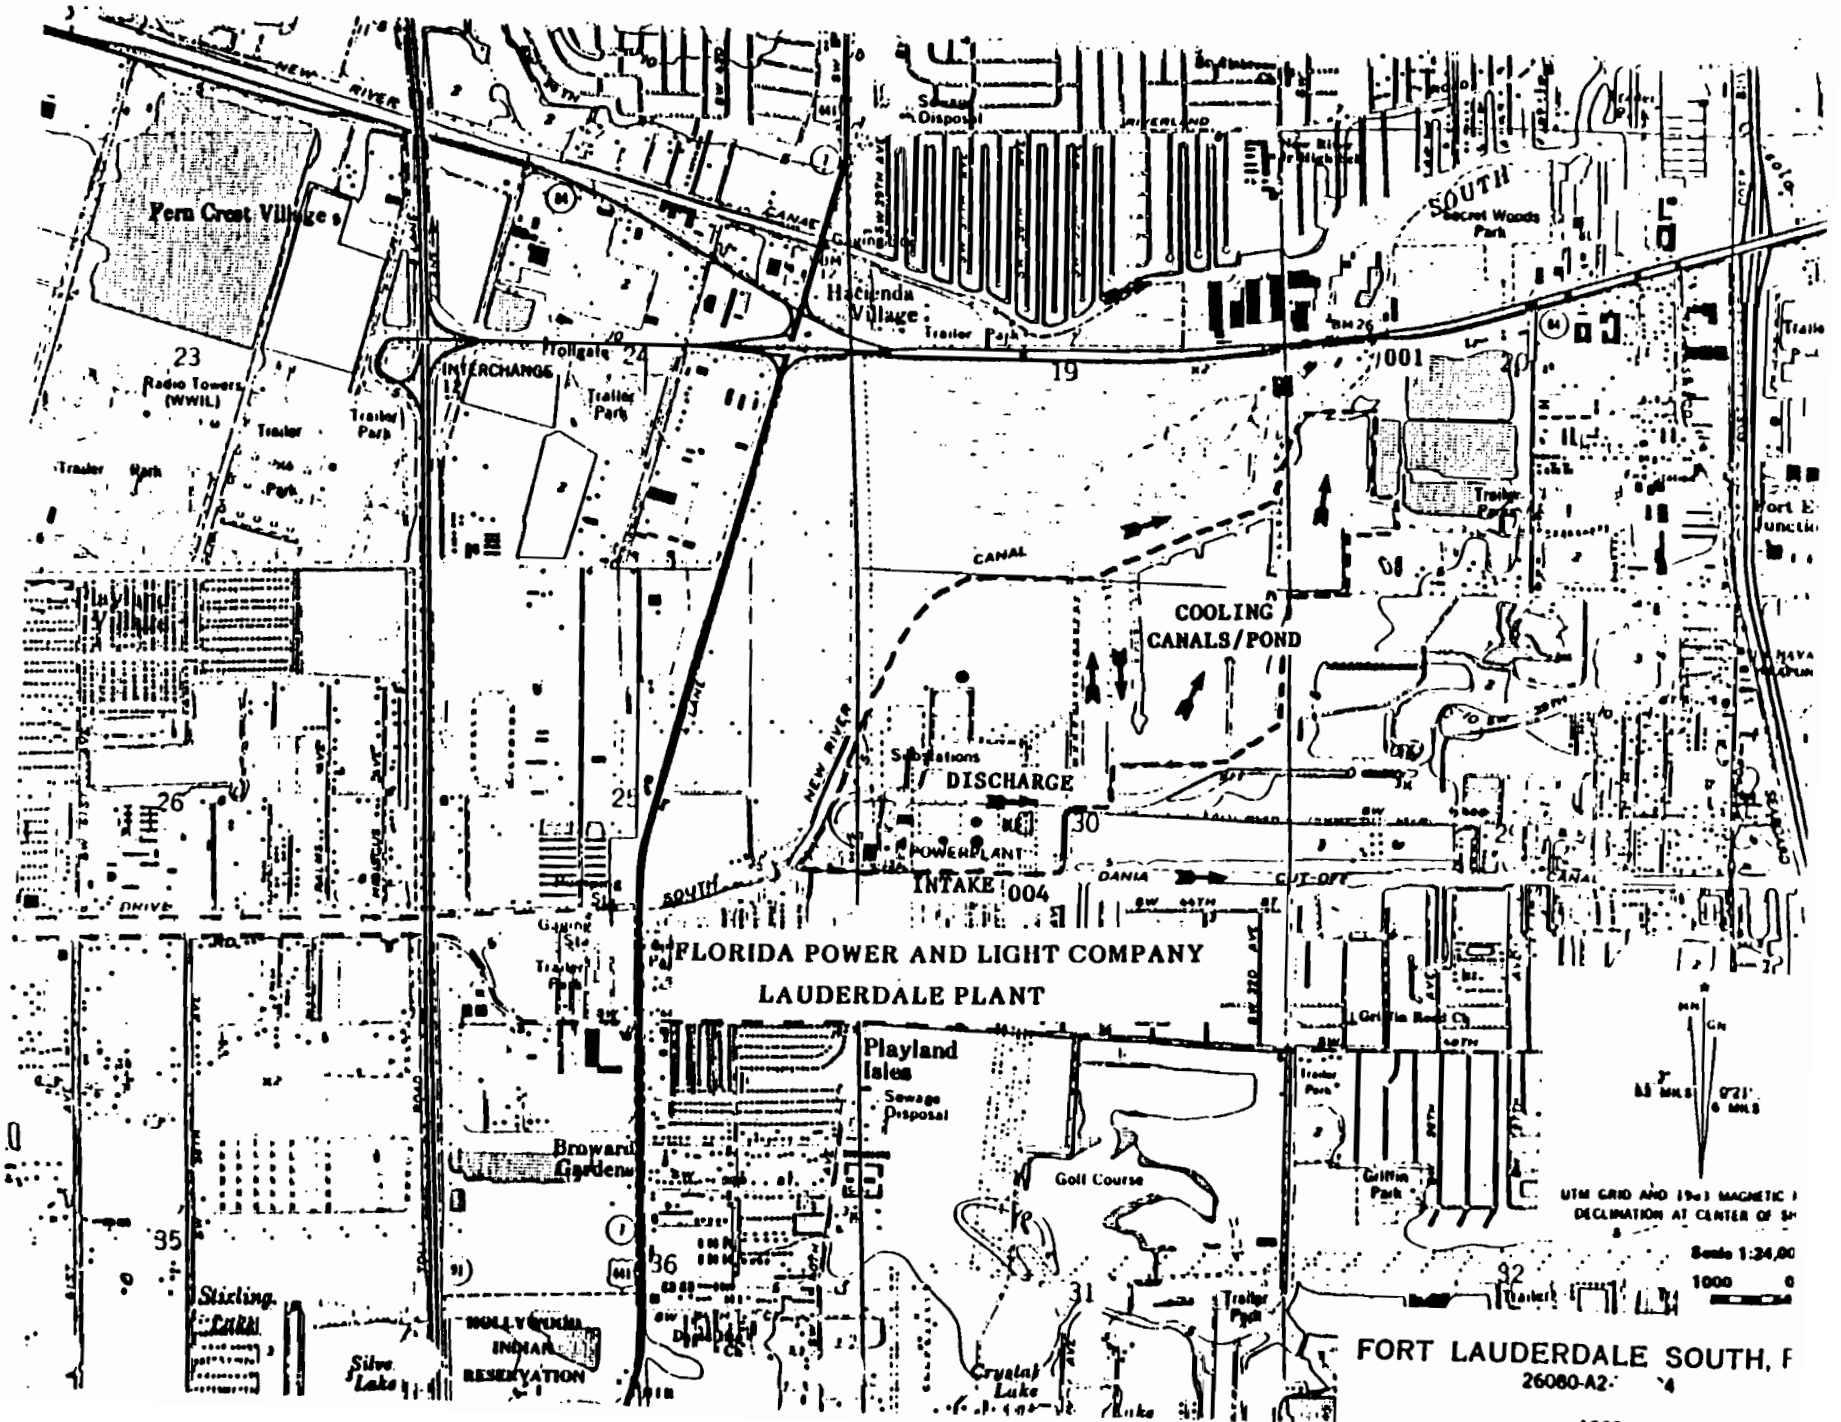
D. Discharge of any product registered under the Federal Insecticide, Fungicide, and Rodenticide Act to any wastestream which may ultimately be released to lakes, rivers, streams, or other waters of the United States is prohibited unless specifically authorized elsewhere in this permit.

E. Reopener Clause

This permit shall be modified, or alternatively revoked and reissued, to comply with any applicable effluent standard or limitation issued or approved under Sections 301(b)(2)(C), and (D), 304(b)(2), and 307(a)(2) of the Clean Water Act, if the effluent standard or limitation so issued or approved:

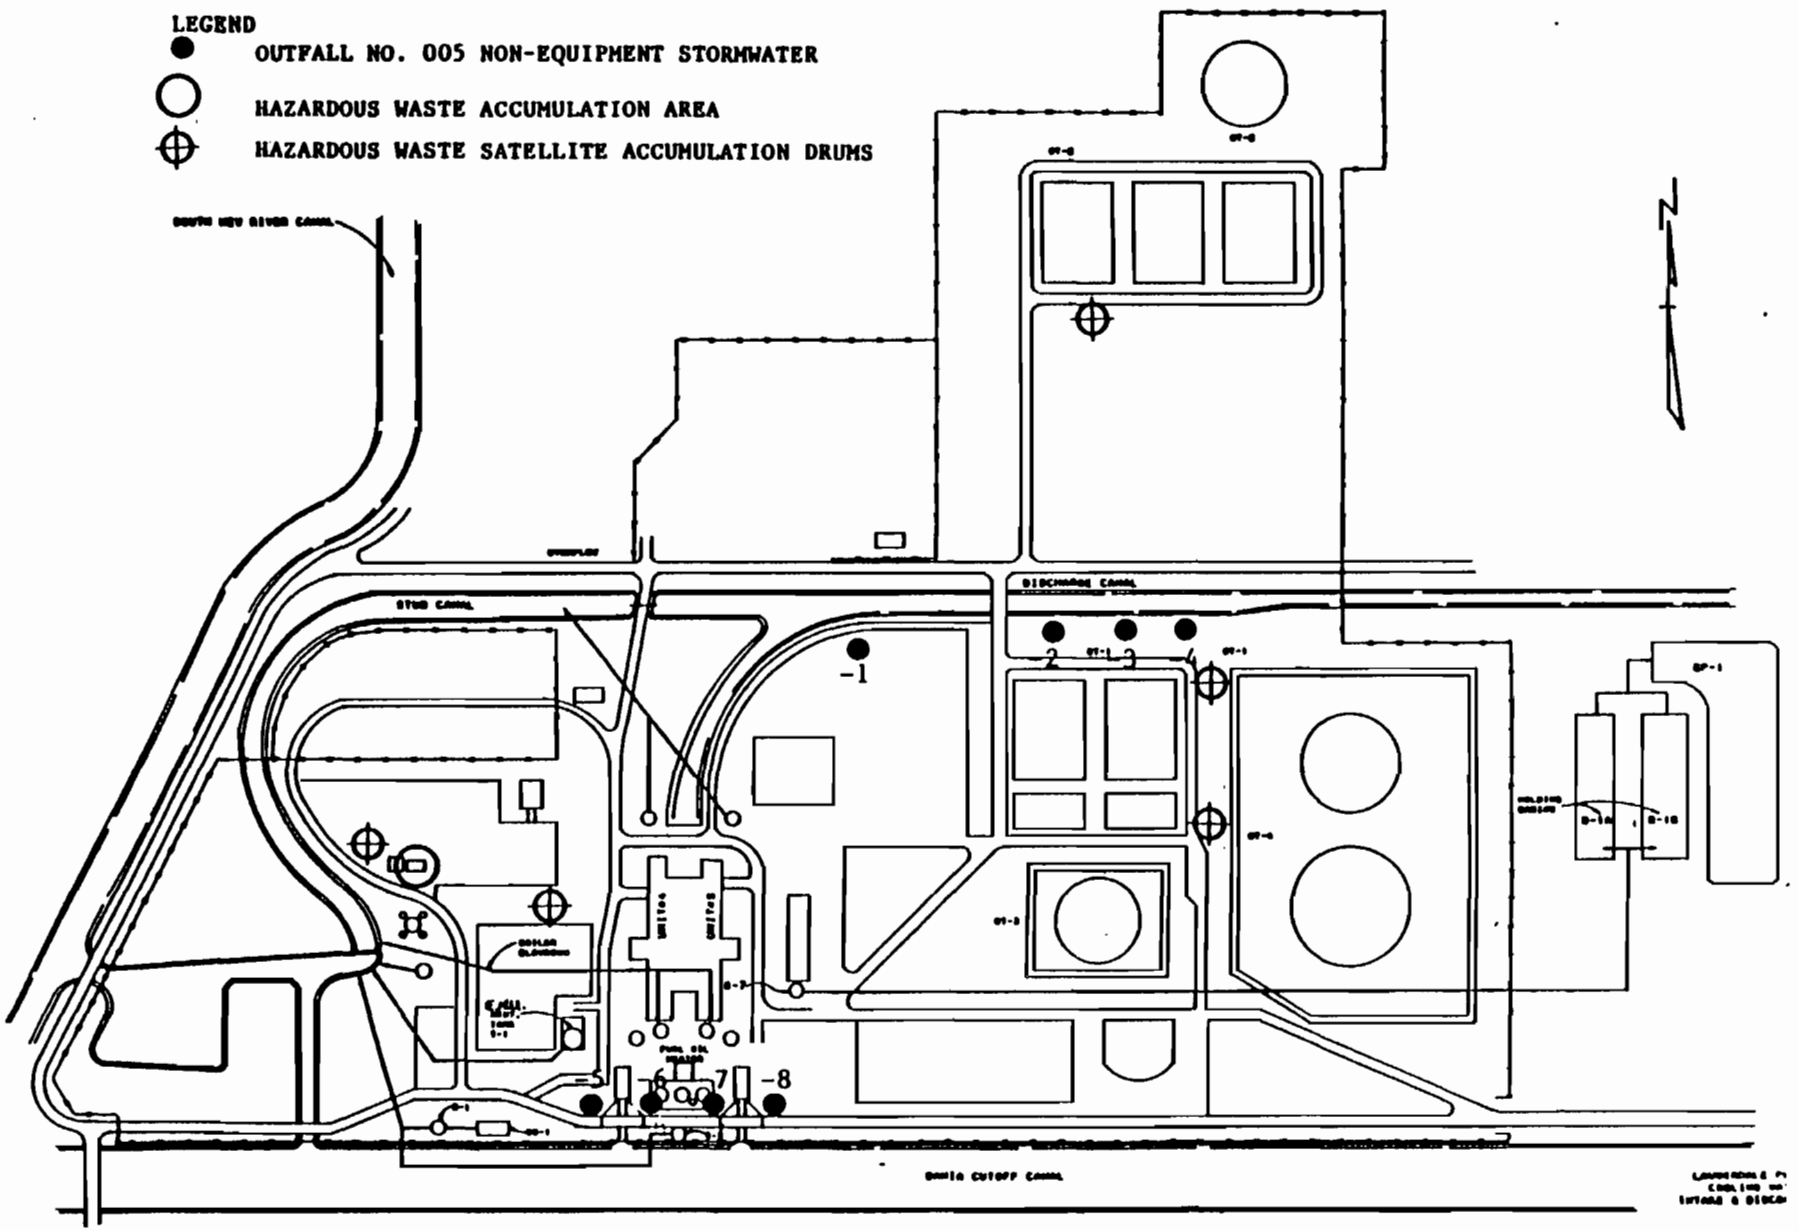
1. Contains different conditions or is otherwise more stringent than any effluent limitation in the permit; or
2. Controls any pollutant not limited in the permit.

The permit as modified or reissued under this paragraph shall also contain any other requirements of the Act then applicable.



ATTACHMENT 1

10.1.1-23



ATTACHMENT 2

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET
ATLANTA, GEORGIA 30365

AMENDMENT TO THE FACT SHEET

Date: March 30, 1987

Facility: Florida Power & Light - Lauderdale Plant

Permit No: FL0001503

I. Comments received during the public comment period.

Comments were received from the applicant by letter dated March 20, 1987.

Item 1 - OSN 001 is identified as the combined discharge of once through cooling water and auxiliary cooling water; however, samples taken in compliance with the permit monitoring requirements shall be at the outlet corresponding to an induvidual unit. Thus no change was made to the permit.

Item 2 - The outfall number for non-equipment area stormwater was changed to a single serial number as requested.

Item 3 - Item I-B is a description of the facility taken directly from the renewal application. The application identifies only one stormwater outfall 005. OSN 005 is actually eight individual discharge pipes. Item III B and Attachment 2 has been changed to one outfall with eight individual pipe numbers.

Item 4 - The zip codes were corrected.

II. Changes in the final permit from the draft permit.

A. The zip codes for the facility were corrected.

B. Non-equipment area stormwater was assigned one serial number with eight (8) individual pipe numbers. Permit and Fact Sheet were changed appropriately.

III. Results of State Certification

State certification was requested on January 29, 1987. State certification is hereby deemed waived.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IV

345 COURTLAND STREET
ATLANTA, GEORGIA 30365

FACT SHEET

Permit No. FL0001503
Permit Writer: Darlene Vincent

Date: December 12, 1986
Revised: March 30, 1987

I. SYNOPSIS OF APPLICATION

A. Name of Address of Applicant

Florida Power & Light Company (FP&L)
P. O. Box 14000
Juno Beach, Florida 33408

for its

Lauderdale Plant
P. O. Box 8248
Ft. Lauderdale, FL 33314

B. Description of Facility from Application

FP&L, Lauderdale Plant is a two unit oil/gas-fired steam electric plant with a total nameplate rating of 312 MW(net 274 MW). The first unit (Unit 4) was placed in service in 1957 and the second (Unit 5), 1958. Each unit utilizes once through cooling water which is withdrawn from the Dania Cut-off Canal at a total rate of 232,000 gpm. The application describes three discharges points: Outfall Serial Number (OSN) 001 consists of once through condenser cooling water and auxiliary equipment cooling water, OSN 004 is intake screen wash water, and OSN 005 is non-equipment area stormwater. OSN 001 is discharged to South Fork of New river after cooling canal/pond residence. OSN 004 is discharged to the intake. And OSN 005 is discharged to Dania Cut-off Canal and South Fork of New River.

Boiler blowdown, water treatment plant wastes, floor drain discharges, and metal cleaning wastes are collected and routed to an evaporation/percolation pond system from which there is no discharge to waters of the United States. Sanitary wastes are routed to septic tanks and their associated drain fields.

II. SYNOPSIS OF PERMITTING ACTIVITIES (to date)

The permit was first issued February 31, 1974. It was reissued February 20, 1976 and again November 30, 1981. The permit expired November 30, 1986. On May 29, 1986, FP&L applied for permit renewal. Public Notice on the draft permit is scheduled for February 26, 1987. State Certification was requested on January 29, 1987.

III. RECEIVING WATER

A. Name of Receiving Waters

001 - South Fork New River (after cooling canal/pond residence)
004 - Facility Intake from Dania Cutoff Canal
005 - 1 thru 4 South Fork of New River after cooling canal/pond residence
5 thru 8 Intake on Dania Cut-off Canal

B. Location - See Permit Attachments

SW 42 Street, 2 miles West off Ravenswood
Broward Co., Ft. Lauderdale, Florida

Latitude 26° 04' 06'
Longitude 80° 11' 58"

C. Florida Water Quality Classification

Class III waters suitable for recreation, and the propagation and maintenance of fish and wildlife.

IV. DESCRIPTION OF OUTFALLS (As reported in Application)

A. OSN 001 - Once through cooling water Units 4 and 5 and auxiliary equipment cooling water.

Effluent Characteristic	Maximum 30 day Value
Total Suspended Solids, mg/l	1.5
Flow, MGD	269
Temperature (winter), °C	28.9
Temperature (summer), °C	35.3
pH Range, standard unit	7.58 - 7.75

B. OSN 004 - Screen wash water

Screen wash water is the same as once - through cooling water and thus has the same chemical and physical characteristics.

C. Analytical data for non-equipment area stormwater are not required.

V. APPLICABLE REGULATIONS

A. Best Practicable Control Technology Currently Available (BPT): 40 CFR 423.12 (47 FR 52290), November 9, 1982.

B. Best Available Technology Economically Achievable (BAT): 40 CFR 423.13 (47 FR 52290), November 9, 1982.

C. Best Conventional Pollutant Control Technology (BCT): 40 CFR 423.14 (47 FR 52290), November 9, 1982. A best professional judgement has been made by the permit writer that BCT = BPT + BAT.

D. Florida Water Quality Standards: The receiving water is classified as Class III waters - Recreation, propagation and maintenance of fish and wildlife (Florida Administrative Code Chapters 17-3, 17-4, and 17-6).

E. 316(a) and 316(b) of the Clean Water Act. The original permit required biological studies to address 316(a)&(b) concerns. The results of these studies were submitted by letter dated November 15, 1976. These results are not in the administrative file. Subsequent permits did not require further testing; thus, the following is assumed:
(1) A 316(a) variance was not requested. Thermal discharges do not violate Florida Water Quality Standards for thermal pollutants and
(2) The intake structure reflects best technology available to minimize adverse environmental impact.

VI. EFFLUENT LIMITATIONS

A. OSN 001

1. This outfall is identified as the combined discharge of once through cooling water from Unit No. 4 and 5 and auxiliary equipment cooling water Fork of New River (after cooling canal/pond residence).

2. Limitations and monitoring requirements for this outfall are included in accordance with the previous NPDES permit. Samples taken in compliance with these monitoring requirements shall be taken at the outlet corresponding to each individual unit.

3. The discharge of free available chlorine or total residual chlorine is not permitted. Should the permittee desire to reinstitute chlorination, the permittee should request a permit modification not later than four (4) months prior to the reinstitution of chlorination.

B. OSN 004

1. This outfall is identified as the discharge of intake screen wash water to Dania Cut-off Canal.

2. The discharge of intake screen wash water is permitted without limitations or monitoring.

C. OSN 005 - 1 thru 8

1. These outfalls are identified as the discharges of non-equipment area stormwater runoff. The locations of these outfalls are shown in Attachment 2 of the permit. It is the permit writer's best professional judgement that these discharges of stormwater runoff are uncontaminated. The outfalls are enumerated only for identification purposes. No monitoring is required at this time.

2. Discharge of stormwater runoff is permitted without limitations or monitoring requirements.

D. Part III

1. FP&L, Lauderdale Plant is a major industrial discharger and as such discharge monitoring reports must be submitted monthly.

2. Special Condition B is included in accordance with 40 CFR 423.13(a).

3. Special Condition C, D, and E are included in accordance with regional policy.

VII. ADMINISTRATIVE RECORD

An administrative record including application, fact sheet, draft permit, comments received, and additional information on hearing procedures is available by writing the EPA address above, or for review and copying at 345 Courtland Street, N.E., 3rd floor, Atlanta, Georgia, 30365, between the hours of 8:15a.m. and 4:30p.m. Monday through Friday. Copies will be provided at a cost of 20 cents per page.

VIII. RESULTS OF STATE CERTIFICATION

State certification was requested on January 29, 1987.

IX. REFERENCES AND CITED DOCUMENTS

All materials and documents referenced or cited in this fact sheet are either part of the Administrative Record as described in item VII above or are readily availabe at EPA, Region IV. Information regarding these materials may be obtained from the person listed below.

X. EPA CONTACT

Additional information concerning the permit may be obtained at the address and during hours noted in item VII from:

Ms. Suzanne D. Potter
Public Notice Coordinator
404/347-3004

XI. PROCEDURES FOR THE FORMULATION OF FINAL DETERMINATIONS

A. Comment Period

The Environmental Protection Agency proposes to issue and NPDES permit to this applicant subject to the aforementioned effluent limitations and special conditions. These determinations are tentative and open to comment from the public.

Interested persons are invited to submit written comments regarding permit issuance or the proposed permit limitations and conditions to the following address:

Environmental Protection Agency
345 Courtland Street, NE
Atlanta, Georgia 30365
ATTN: Ms. Suzanne D. Potter, Public Notice Coordinator

All comments received within thirty (30) days following the date of public notice will be considered in the formulation of final determinations with regard to proposed permit issuance.

B. Public Hearing

The EPA Regional Administrator will hold a public hearing if there is a significant degree of public interest in a proposed permit or group of permits, or if he determines that useful information and data may be obtained thereby. Public Notice of such a hearing will be circulated at least thirty days prior to the hearing.

C. Issuance of the Permit

After consideration of all written comments and of the requirements and policies in the Act and appropriate regulations, and, if a public hearing is held, after consideration of all comments, statements and data presented at the hearing, the EPA Regional Administrator will make determinations regarding the permit issuance. If the determinations are substantially unchanged from the tentative determinations outlined above, the Regional Administrator will so notify all persons submitting written comments, and, if a public hearing was held, all persons participating in the hearing. If the determinations are substantially changed, the EPA Regional Administrator will issue a public notice indicating the revised determinations.

Unless a request for an evidentiary hearing is granted, the proposed permit contained in the Regional Administrator's determinations shall become issued and effective and will be the final action of the U. S. Environmental Protection Agency.

D. Evidentiary Hearing

If the determination are substantially unchanged, any interested person may submit a request for an evidentiary hearing on the permit and its conditions within thirty (30) days of the receipt of the notice described in Section C. If the determinations are substantially changed, any interested person may submit a request for an evidentiary hearing within thirty days of the date of the public notice or of the date of becoming aware of the determinations, which ever comes first. Such requests will be within the time period if mailed by Certified Mail within the thirty day period to the Regional Hearing Clerk, Environmental Protection Agency, 345 Courtland Street, N.E., Atlanta, Georgia 30365. All requests must contain:

(1) The name, mailing address and telephone number of the person making such request;

(2) A clear and concise factual statement of the nature and scope of the interest of the requester;

(3) The names and addresses of all persons whom the requester represents; and

(4) A statement by the requester that, upon motion of any party, or sua sponte by the Presiding Officer and without cost or expense to any other party, the requester shall make available to appear and testify, the following:

(i) The requester;

(ii) All persons represented by the requester, and

(iii) All officers, directors, employees, consultants and agents of the requester and the persons represented by the requester.

(5) Specific references to the contested permit terms and conditions, as well as suggested revised or alternative permit terms and conditions (not excluding permit denial) which, in the judgement of the requester, would be required to implement the purposes and policies of the Act.

(6) In the case of challenges to the application of control or treatment technologies identified in the statement of basis or fact sheet, identification of the basis for the objection, and the alternative technologies or combination of technologies which the requester believes are necessary to meet the requirements of the Act.

(7) Specific identification of each of the discharger's obligations which should be stayed if the request is granted. If the request contests more than one permit term or condition then each obligation which is proposed to be stayed must be referenced to the particular contested term warranting the stay.

(8) Each legal or factual question alleged to be at issue and its relevance to the permit decision.

(9) An estimate of the hearing time necessary for adjudication.

(10) Information supporting the request or relied upon which is not already a part of the administrative record required by 40 CFR 124.18 (48 Fed. Reg. 14272, April 1, 1983).

The granting of a request will stay only the contested portions of the permit. Uncontested provisions of the permit shall be considered issued and effective and the permittee must comply with such provisions. Except, if the permit is for a new source or new discharge, the applicant will be without a permit for the proposed new source or new discharge, pending final Agency action. The final Agency decision on the permit provisions contested at an evidentiary hearing will be made in accordance with Title 40, Code of Federal Regulation, Subpart E, found at 48 Federal Register 14278, et seq.

APPENDIX 10.1.2

NPDES PERMIT APPLICATION

Please print or type in the unshaded areas only
(fill-in areas are spaced for elite type, i.e., 12 characters/inch).

PLEASE PLACE LABEL IN THIS SPACE

GENERAL INSTRUCTIONS

If a preprinted label has been provided, affix it in the designated space. Review the information carefully; if any of it is incorrect, cross through it and enter the correct data in the appropriate fill-in area below. Also, if any of the preprinted data is absent *(the area to the left of the label space lists the information that should appear)*, please provide it in the proper fill-in area(s) below. If the label is complete and correct, you need not complete Items I, III, V, and VI *(except VI-B which must be completed regardless)*. Complete all items if no label has been provided. Refer to the instructions for detailed item descriptions and for the legal authorizations under which this data is collected.

II. POLLUTANT CHARACTERISTICS

INSTRUCTIONS: Complete A through J to determine whether you need to submit any permit application forms to the EPA. If you answer "yes" to any questions, you must submit this form and the supplemental form listed in the parenthesis following the question. Mark "X" in the box in the third column if the supplemental form is attached. If you answer "no" to each question, you need not submit any of these forms. You may answer "no" if your activity is excluded from permit requirements; see Section C of the instructions. See also, Section D of the instructions for definitions of bold-faced terms.

SPECIFIC QUESTIONS	MARK 'X' YES	NO	FORM ATTACHED
A. Is this facility a publicly owned treatment works which results in a discharge to waters of the U.S.? (FORM 2A)		X	
B. Does or will this facility *(either existing or proposed)* include a concentrated animal feeding operation or aquatic animal production facility which results in a discharge to waters of the U.S.? (FORM 2B)		X	
C. Is this a facility which currently results in discharges to waters of the U.S. other than those described in A or B above? (FORM 2C)	X		
D. Is this a proposed facility *(other than those described in A or B above)* which will result in a discharge to waters of the U.S.? (FORM 2D)		X	
E. Does or will this facility treat, store, or dispose of hazardous wastes? (FORM 3)		X	
F. Do you or will you inject at this facility industrial or municipal effluent below the lowermost stratum containing, within one quarter mile of the well bore, underground sources of drinking water? (FORM 4)		X	
G. Do you or will you inject at this facility any produced water or other fluids which are brought to the surface in connection with conventional oil or natural gas production, inject fluids used for enhanced recovery of oil or natural gas, or inject fluids for storage of liquid hydrocarbons? (FORM 4)		X	
H. Do you or will you inject at this facility fluids for special processes such as mining of sulfur by the Frasch process, solution mining of minerals, in situ combustion of fossil fuel, or recovery of geothermal energy? (FORM 4)		X	
I. Is this facility a proposed stationary source which is one of the 28 industrial categories listed in the instructions and which will potentially emit 100 tons per year of any air pollutant regulated under the Clean Air Act and may affect or be located in an attainment area? (FORM 5)	X		
J. Is this facility a proposed stationary source which is NOT one of the 28 industrial categories listed in the instructions and which will potentially emit 250 tons per year of any air pollutant regulated under the Clean Air Act and may affect or be located in an attainment area? (FORM 5)		X

004	26	04	01	80	11	58	Facility Intake from Dania Cut-Off Canal
005	26	04	01	80	11	58	Dania Cut-Off Canal(5 Release Points)
005	26	05	08	80	10	55	South Fork of New River Through Cooling Canal/Pond (4 Release Points)

II. FLOWS, SOURCES OF POLLUTION, AND TREATMENT TECHNOLOGIES

A. Attach a line drawing showing the water flow through the facility. Indicate sources of intake water, operations contributing wastewater to the effluent, and treatment units labeled to correspond to the more detailed descriptions in Item B. Construct a water balance on the line drawing by showing average flows between intakes, operations, treatment units, and outfalls. If a water balance cannot be determined *(e.g., for certain mining activities)*, provide a pictorial description of the nature and amount of any sources of water and any collection or treatment measures.

B. For each outfall, provide a description of: (1) All operations contributing wastewater to the effluent, including process wastewater, sanitary wastewater, cooling water, and storm water runoff; (2) The average flow contributed by each operation; and (3) The treatment received by the wastewater. Continue on additional sheets if necessary.

1. OUTFALL NO. (list)	2. OPERATION(S) CONTRIBUTING FLOW a. OPERATION (list)	b. AVERAGE FLOW (include units)	3. TREATMENT a. DESCRIPTION	b. LIST CODES FROM TABLE 2C-1	
001	Once through condenser cooling water for Unit #4, Unit #5 and auxiliary equipment water ; Effluent from central treatment facility+	256,781 GPM	Screening and treatment Discharge to surface water (after cooling canal/pond residence.)	1-T 4-A	
004	Intake screen wash water for Unit #4 and Unit #5	600 GPM	Discharge to surface water	4-A	
005*	Non-equipment area Stormwater runoff (consists of 9 release points)	Variable	Discharge to surface water	4-A	

*Analytical data for non-equipment area storm water was not required for the existing NPDES permit. There are no limitations or monitoring requirements for the discharge of stormwater runoff.

+ Analytical data for the proposed central wastewater treatment facility effluent will be collected and analyzed at the start-up of the wastewater treatment facility. The estimated water quality for various parameters are given in Table IV-1.

OFFICIAL USE ONLY *(effluent guidelines sub-categories)*

CONTINUED FROM THE FRONT

C. Except for storm runoff, leaks, or spills, are any of the discharges described in Items II-A or B intermittent or seasonal?

☐ YES *(complete the following table)* ☒ NO *(go to Section III)*

1. OUTFALL NUMBER *(list)*	2. OPERATION(s) CONTRIBUTING FLOW *(list)*	3. FREQUENCY		4. FLOW				
		a. DAYS PER WEEK *(specify average)*	b. MONTHS PER YEAR *(specify average)*	a. FLOW RATE *(in mgd)*		b. TOTAL VOLUME *(specify with units)*		c. DURATION *(in days)*
				1. LONG TERM AVERAGE	2. MAXIMUM DAILY	1. LONG TERM AVERAGE	2. MAXIMUM DAILY	

III. PRODUCTION

A. Does an effluent guideline limitation promulgated by EPA under Section 304 of the Clean Water Act apply to your facility?

☒ YES *(complete Item III-B)* ☐ NO *(to to Section IV)*

B. Are the limitations in the applicable effluent guideline expressed in terms of production *(or other measure of operation)*?

☐ YES *(complete Item III-C)* ☒ NO *(go to Section IV)*

C. If you answered "yes" to Item III-B, list the quantity which represents an actual measurement of your level of production, expressed in the terms and units used in the applicable effluent guideline, and indicate the affected outfalls.

1. AVERAGE DAILY PRODUCTION			2. AFFECTED OUTFALLS
a. QUANTITY PER DAY	b. UNITS OF MEASURE	c. OPERATION, PRODUCT, MATERIAL, ETC. *(specify)*	*(list outfall numbers)*

IV. IMPROVEMENTS

A. Are you now required by any Federal, State or local authority to meet any implementation schedule for the construction, upgrading or operation of wastewater treatment equipment or practices or any other environmental programs which may affect the discharges described in this application? This includes, but is not limited to, permit conditions, administrative or enforcement orders, enforcement compliance schedule letters, stipulations, court orders, and grant or loan conditions.

☐ YES *(complete the following table)* ☒ NO *(go to Item IV-B)*

1. IDENTIFICATION OF CONDITION, AGREEMENT, ETC.	2. AFFECTED OUTFALLS		3. BRIEF DESCRIPTION OF PROJECT	4. FINAL COMPLIANCE DATE	
	a. NO.	b. SOURCE OF DISCHARGE		a. REQUIRED	b. PROJECTED

B. OPTIONAL: You may attach additional sheets describing any additional water pollution control programs *(or other environmental projects which may affect your discharges)* you now have underway or which you plan. Indicate whether each program is now underway or planned, and indicate your actual or planned schedules for construction. ☒ MARK "X" IF DESCRIPTION OF ADDITIONAL CONTROL PROGRAMS IS ATTACHED

V. INTAKE AND EFFLUENT CHARACTERISTICS

A, B, & C: See instructions before proceeding — Complete one set of tables for each outfall — Annotate the outfall number in the space provided. NOTE: Tables V-A, V-B, and V-C are included on separate sheets numbered V-1 through V-9.

D. Use the space below to list any of the pollutants listed in Table 2c-3 of the instructions, which you know or have reason to believe is discharged or may be discharged from any outfall. For every pollutant you list, briefly describe the reasons you believe it to be present and report any analytical data in your possession.

N/A			

VI. POTENTIAL DISCHARGES NOT COVERED BY ANALYSIS

Is any pollutant listed in item V-C a substance or a component of a substance which you currently use or manufacture as an intermediate or final product or byproduct?

☐ YES *(list all such pollutants below)* ☒ NO *(go to Item VI-B)*

N/A

PLEASE PRINT OR TYPE IN THE UNSHADED AREAS ONLY. You may report some or all of this information on separate sheets *(use the same format)* instead of completing these pages. SEE INSTRUCTIONS.

CONTINUED FROM PAGE 3 OF FORM 2-C

PART C - If you are a primary industry and this outfall contains process wastewater, refer to Table 2c-2 in the instructions to determine which of the GC/MS fractions you must test for. Mark "X" in column 2-a for all such GC/MS fractions that apply to your industry and for ALL toxic metals, cyanides, and total phenols. If you are not required to mark column 2-a *(secondary industries, nonprocess wastewater outfalls, and nonrequired GC/MS fractions)*, mark "X" in column 2-b for each pollutant you know or have reason to believe is present. Mark "X" in column 2-c for each pollutant you believe is absent. If you mark column 2a for any pollutant, you must provide the results of at least one analysis for that pollutant. If you mark column 2b for any pollutant, you must provide the results of at least one analysis for that pollutant if you know or have reason to believe it will be discharged in concentrations of 10 ppb or greater. If you mark column 2b for acrolein, acrylonitrile, 2,4 dinitrophenol, or 2-methyl-4, 6 dinitrophenol, you must provide the results of at least one analysis for each of these pollutants which you know or have reason to believe that you discharge in concentrations of 100 ppb or greater. Otherwise, for pollutants for which you mark column 2b, you must either submit at least one analysis or briefly describe the reasons the pollutant is expected to be discharged. Note that there are 7 pages to this part; please review each carefully. Complete one table *(all 7 pages)* for each outfall. See instructions for additional details and requirements.

g. Temperature *(winter)*	VALUE		VALUE		VALUE			°C		VALUE		
h. Temperature *(summer)*	VALUE		VALUE		VALUE			°C		VALUE		
i. pH	MINIMUM	MAXIMUM	MINIMUM	MAXIMUM				STANDARD UNITS				

PART B - Mark "X" in column 2-a for each pollutant you know or have reason to believe is present. Mark "X" in column 2-b for each pollutant you believe to be absent. If you mark column 2a for any pollutant which is limited either directly, or indirectly but expressly, in an effluent limitations guideline, you must provide the results of at least one analysis for that pollutant. For other pollutants for which you mark column 2a, you must provide quantitative data or an explanation of their presence in your discharge. Complete one table for each outfall. See the instructions for additional details and requirements.

ATTACHMENT 4

RESPONSE TO ITEM IVB--IMPROVEMENTS

The discharge sources at the repowered plant will include the heat dissipation system, domestic/sanitary wastewater, equipment area stormwater, and wastewaters from the process water systems. The changes from the existing to the repowered plant in these wastewater flows, quality, and treatment processes is summarized as follows:

1. Heat Dissipation System--The heat dissipation system consists of two components, the condenser cooling water system and the auxiliary cooling (open cooling) system. These systems include:
   a. Condenser cooling water system--This system is the largest discharge from the plant (at 232,000 gpm) and will not be changed in terms of flow rate or temperature rise.
   b. Open cooling water system--The flow rate for this system will be increased from 6,000 gpm to 20,000 gpm. The water source will be changed from groundwater to surface water (i.e., the Dania Cut-Off Canal) but the location of the discharge will remain the same.
2. Domestic/sanitary wastewater--This is the smallest water use at the plant (9 gpm) and the quality is not expected to change with repowering. The existing system discharges to various septic tanks located on the plant property. After repowering, the system will discharge primarily to a POTW; however, some small contributors (i.e., remote restrooms) will continue to use the septic tanks.
3. Process water system--The source of water for this system will be changed from exclusively potable groundwater to predominately nonpotable groundwater. As such, the wastestreams generated during the water treatment processes will change (in quantity and quality) and a new treatment facility will be constructed.
4. Equipment area stormwater and floor washings will be collected and routed to the new central wastewater treatment facility before being released to the existing cooling canal/pond system.

A quantitive water use diagram for the above systems is presented in Figure IV-1. Discussions of these systems are presented in detail in the following sections.

HEAT DISSIPATION SYSTEM

SYSTEM DESIGN

The repowered plant will continue to utilize the existing open cycle cooling canal/pond system for heat dissipation. The heat will be dissipated via water used for condenser cooling (circulating water) and for open cooling (steam turbine generator hydrogen coolers, steam turbine lube oil coolers, steam turbine hydrogen seal oil coolers, CT generator hydrogen coolers, CT lube oil coolers, HRSG feed pump lube oil coolers, HRSG feed pump mechanical seal water heat exchangers, instrument air compressors and aftercoolers, service air compressors and aftercoolers, steam and water analysis sample cooler, condensate pump motor bearing coolers, and mechanical vacuum pump heat exchangers).

Water from the Dania Cut-Off Canal passes directly through the intake channel into the intake structure. The intake structure is divided in the center by a concrete wall which forms two separate pump bays, each furnished with one vertical circulating water pump (CWP) and one vertical open cooling water pump (OCWP). The dividing wall prevents any possible vortex interference between the two CWPs and reduces the size of the intake screens and stop logs upstream of the pumps. The dividing wall, in conjunction with the stop logs, also permits isolation of each bay to facilitate maintenance. The intake screens, consisting of bar or coarse screens, and traveling screens, and the floating trash boom, minimize the carryover of objectionable debris. The bar screens are furnished with a trash rake to clean off collected debris. Screen wash water and screen debris flow together through intake structure troughs which discharge into a trash bucket. The trash bucket traps the debris and allows the water to return to the channel. Debris is disposed to an off-site landfill.

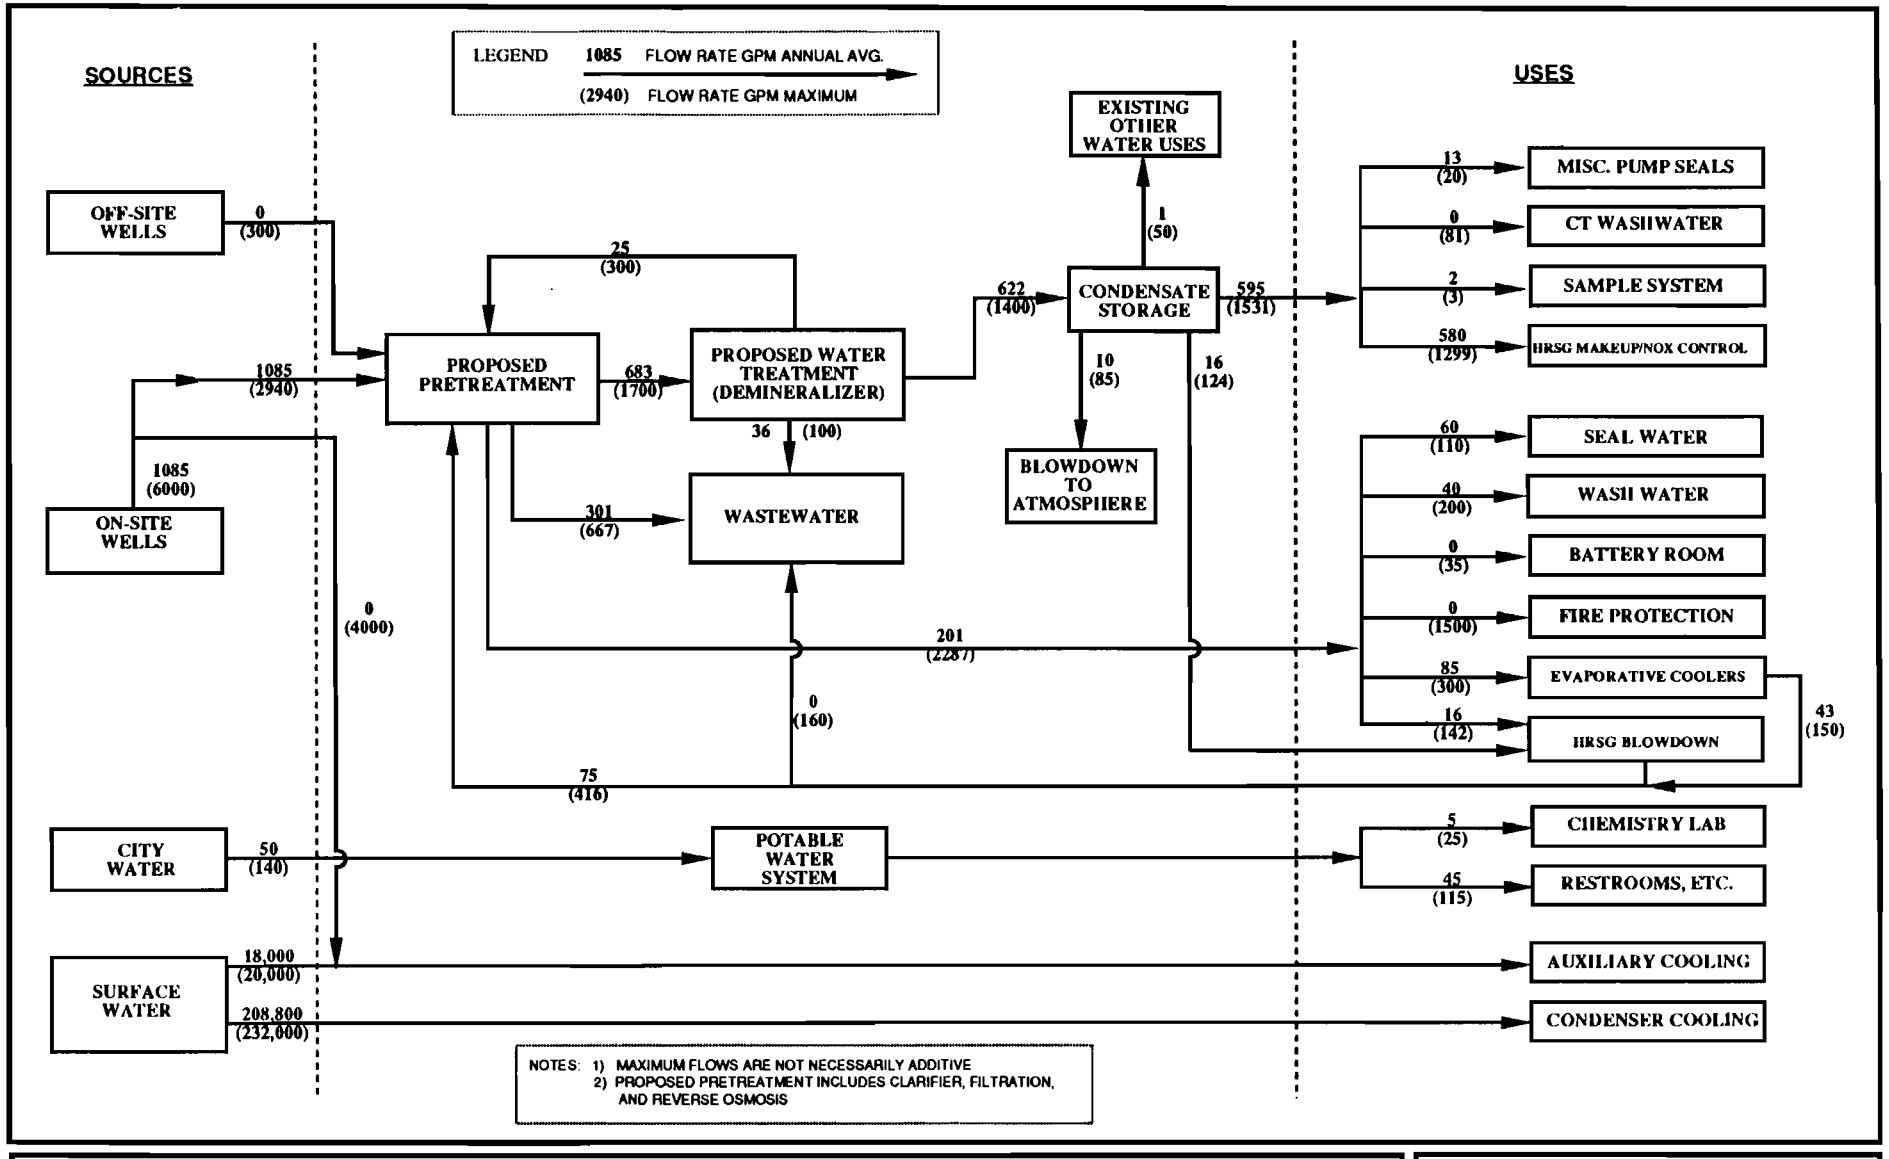

Figure IV-1 PROPOSED WATER USES SIMPLIFIED FLOW DIAGRAM

Lauderdale Repowering Project

FPL

Each circulating water pump discharges into a separate 4-1/2-ft diameter reinforced concrete pressure pipe which conveys the cooling water to a cast iron pipe and waterbox at the condenser inlet. The water flows through the Sea-cure stainless steel tubes, through a cast iron waterbox and pipe at the condenser outlet, and through both a reinforced concrete pressure pipe and a corrugated pipe encased in concrete, out into the discharge canal. The condenser is of a single shell, single pressure, divided waterbox design. The circulating water picks up heat in the condenser, causing the steam from the steam turbine to condense.

The two open cooling water pumps discharge into a common header which conveys cooling water to two 100-percent self-cleaning strainers which further strain objectionable debris from the water. The strainers are located adjacent to the intake structure and discharge the backwash flow into the Dania Cut-Off Canal. Water from the strainers passes on to and through three 50-percent capacity closed cooling water heat exchangers (HX) and is released to the discharge canal. Isolation valves are furnished for each HX, along with valving to facilitate backwashing the HX.

This water from the "open" side of the system is used to cool water from the closed side of the same system. That "closed" cooling water, in turn, has picked up heat from all those items listed above (e.g., hydrogen coolers, lube oil coolers, etc.).

DOMESTIC/SANITARY WASTEWATER

Domestic/sanitary wastewater, as shown in Figure IV-1, is now and will continue to be generated from the potable water system. The expected flow rate is 45 gpm average (about 65,000 gallons a day) and about 115 gpm maximum. The use within showers, sinks, and toilets is only expected to change the water quality from that of the city water in classical sanitary ways by increasing BOD, COD, suspended solids, nitrogen, phosphorous, and fecal coliform. The treatment and disposal system for the project will include an entirely new collection system discharging to the municipal sewer system. The system includes an underground gravity collection

system, pumping stations, and a force main connecting to the City of Hollywood sewer system at Edgewater Road. Septic tanks north of the existing discharge canal and east of the existing evaporation/percolation pond will remain in service.

PROCESS WATER SYSTEMS

Figure IV-2 is a flow diagram of the proposed process water treatment system. These uses include CT steam injection, HRSG makeup, pump seal water, evaporative coolers, and HRSG chemical cleaning. Wastewater flows will be recycled or sent to the proposed new central wastewater treatment system.

The proposed process water treatment system includes clarification and filtration to remove suspended solids and color (preceded by flocculation). Because the primary water source is non-potable water from on-site wells, further treatment is provided by reverse osmosis (RO) to remove dissolved solids. After undergoing the RO treatment, the water is passed through a degasifier to remove CO_2 and, finally, a mixed-bed demineralizer for final polishing. The demineralized water is thus of very high quality (e.g., TDS less than 1 mg/L). Service water, for fire protection, HRSG blowdown quench, and evaporative coolers, is drawn off after the RO stage (i.e., before demineralization).

Figure IV-2 shows the various reuses of water within the water treatment system which will be utilized to minimize source water requirements. Clarifier underflow water will be recycled (averaging 55 gpm) by the use of a filter press to remove that water from the clarifier sludge. Similarly, dual media filter backwash water (averaging 58 gpm) will also be recycled. Evaporative cooler water will be recycled (averaging 43 gpm) as will the rinse waters from demineralizer regeneration (averaging 25 gpm). Blowdown from the HRSGs and blowdown quench water (combined average of 32 gpm) will also be recycled. The total average flow of these recycled streams, about 213 gpm, will be returned to the raw water storage tank, which will be the source of water to the treatment system.

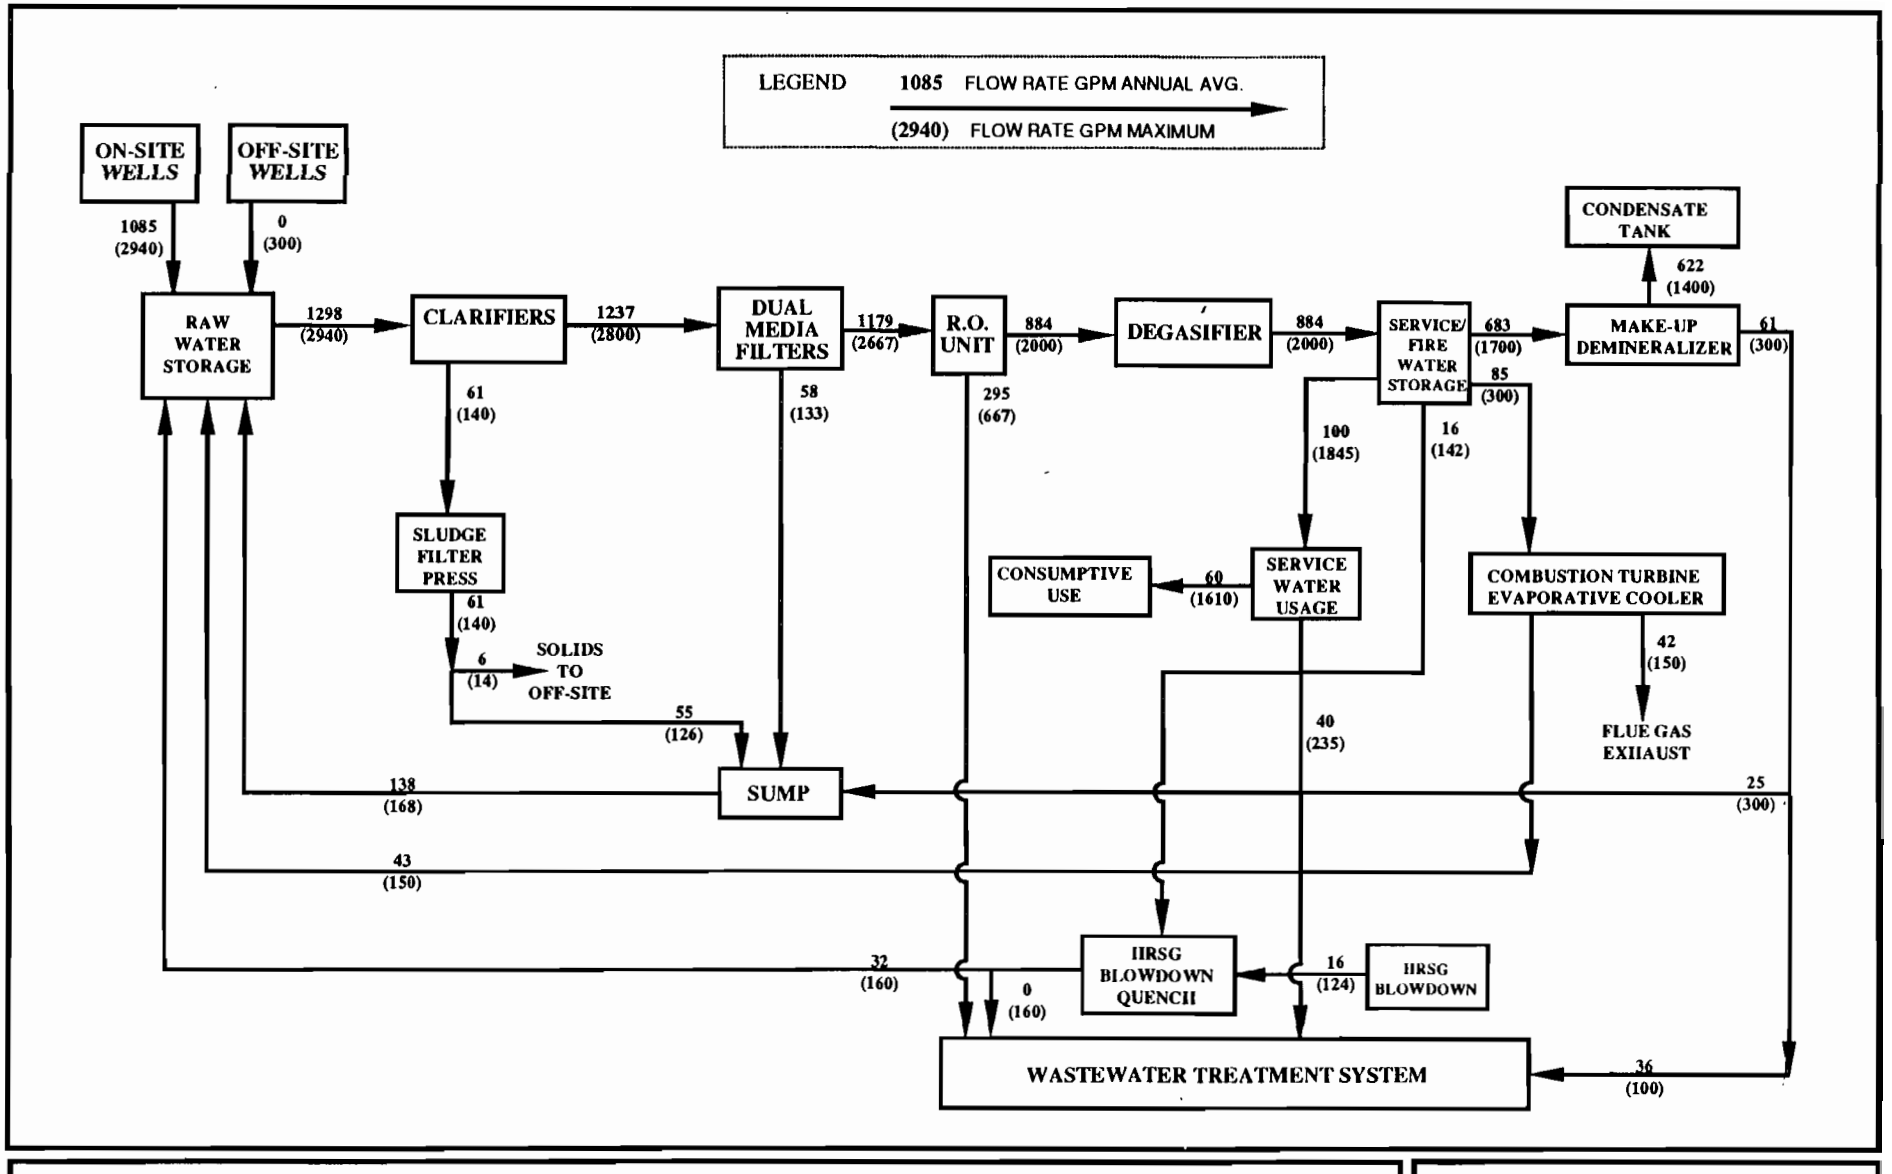

Figure IV-2 PROPOSED PROCESS WATER TREATMENT SYSTEM

Lauderdale Repowering Project

FPL

Wastewaters from the proposed process water treatment system will be treated within a new central wastewater treatment facility, as shown on Figure IV-3. This facility is described in detail in the following section. Table IV-1 presents the estimated quality and quantity of the wastewaters which are influent to this facility.

CHEMICAL WASTESTREAM TREATMENT

Operation of the repowered Units 4 and 5 will generate various chemical-containing liquid wastestreams. Certain of these wastestreams will be treated before discharge. The wastewater treatment system design (see Figure IV-4) consists of the following processes:

1. Pretreatment of oily waste (to remove oils) through the use of a physical/chemical separation process,
2. Neutralization and filtration of the wastewater before discharge, and
3. Off-site disposal for separated oil and dewatered sludge.

Following are brief descriptions of each of the treatment processes involved.

OILY WASTE

Physical Separation Process

A physical separator will be used to remove free oils and grease from the oily wastestream. This separator is capable of effectively separating free oils, grease and settleable solids from water. The slant rib coalescer pack (SRCP) in the separator provides greater coalescing and solids separation area than any other media currently available. The ribs of the SRCP are slanted toward the surface in the direction of flow, encouraging separated oil to float to the surface along the plates before breaking free. The separator consists of the following:

1. Inlet and diffusion chamber where larger solids will drop out into the sludge chamber before entering the pack.

++Combined total of wastewater treatment system effluent and RO concentrate.

DESIGN PHILOSOPHY:

PRETREAT OILY WASTE TO REMOVE OILS THROUGH THE USE OF PHYSICAL/CHEMICAL SEPARATION PROCESS AND NEUTRALIZE AND FILTER THE COMBINED WASTEWATER BEFORE DISCHARGE AND OFF-SITE DISPOSAL FOR SEPARATED OIL AND DEWATERED SLUDGE

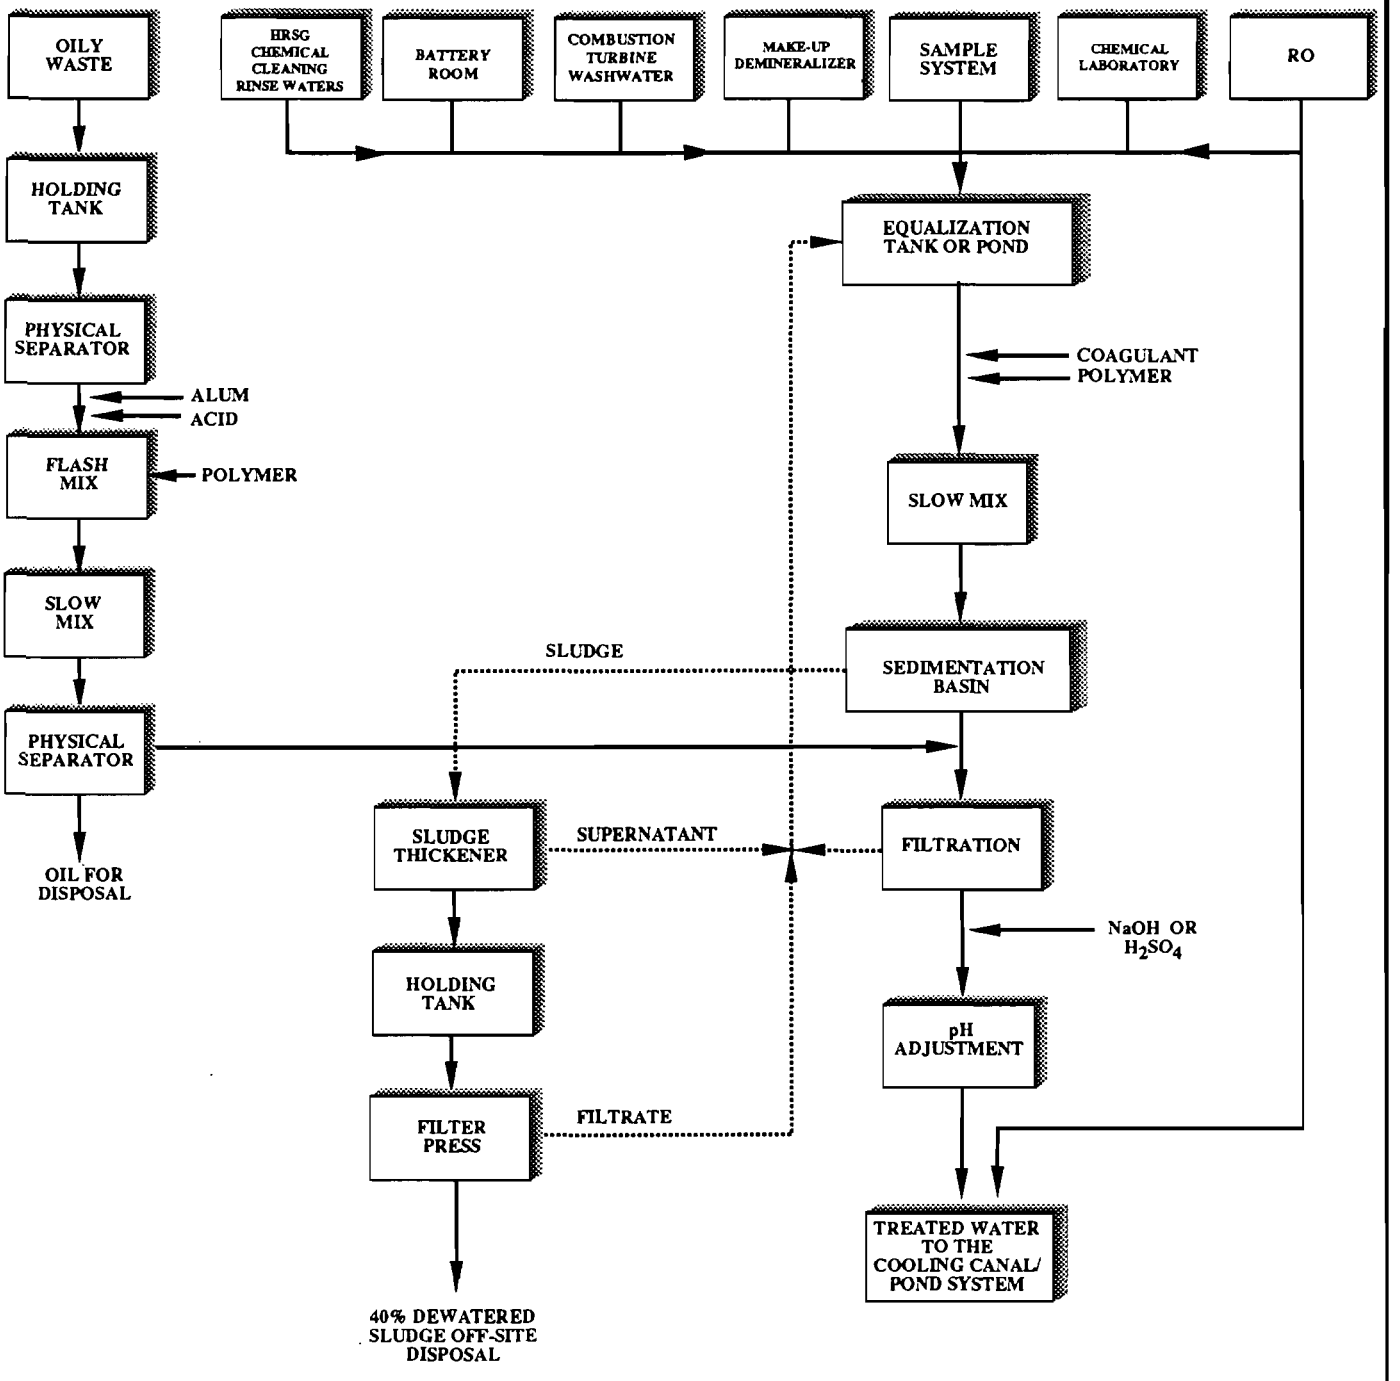

Figure IV-4 WASTEWATER TREATMENT SYSTEM

NOTE: FOR FLOW RATES, SEE FIGURE IV-3.

Lauderdale Repowering Project

FPL

2. Separation chamber filled with the SRCP. The ribbed plates are arranged perpendicular to the direction of flow. The ribbed plates will increase the resistance to flow, enlarge the oil droplets, and separate the oil from the water.
3. Sludge chamber providing adequate volume for the settled sludge.
4. Oil reservoir to accumulate the separated oil before it is removed to a remote storage tank.

Chemical Separation Process

A chemical separation process will be used to break the emulsification of oils in the water and enhance their separation. The first step is to lower the pH to 4 by adding sulfuric acid. At this pH level the chemical compound emulsions will be broken and oils will be freed from the wastewater. To ensure completion of the desired reactions and an increase in oil droplet sizes, aluminum sulfate (alum) will be added simultaneously with the acid. A physical separator will be provided to separate the oils and grease from the water.

The chemical process requires a rapid mixing tank for pH adjustment, a flocculation tank to enhance the particle size growth, two chemical preparation tanks, and two feed tanks with mixers as well as two feed pumps and two solution pumps.

Design Basis:

Flow (gpm)	200*
Oil influent concentration (ppm)	229 average, 1,600 maximum
Oil separation rate (gpm/ft^2)	0.2

*An equalization basin is provided to allow the design flow to be less than the maximum.

Effluent Disposition

The effluent from the chemical separation process is recombined with the other wastewater flows to receive filtration and pH adjustment before discharge.

NON-OILY WASTESTREAMS

Chemical Precipitation Process

The chemical precipitation process is very effective in removing total suspended solids, inorganic contaminants, and for making pH adjustments. The chemical precipitation process may consist of coagulation/ flocculation/precipitation/ filtration depending on test results of actual wastewater testing. Chemical additions such as alum, iron salts, H_2SO_4, NaOH, or polymer, may be needed to carry out the treatment function. The following unit processes will be provided and utilized as necessary.

Slow Mix Flocculation Tanks--Two tanks will be provided for flocculation. The minute particles will be brought into contact with each other and with other particles under prolonged agitation in this slow mix flocculation tank, during which time the particles coalesce, increase in size, and will be packed to a greater density for settlement.

Sedimentation Basin--One inclined up flow clarifier will be provided for precipitation. The inclined plate settler unit contains a series of stacked plates, approximately 2 inches apart, inclined at an angle of 55 to 60 degrees from the horizontal.

Filters--Two dual media pressure filters are provided for filtration. The objective of filtration is to produce an effluent with very low total suspended solids.

Design Basis:

Flow (gpm)	650
Slow mix (minutes detention time)	20
Precipitation overflow rate (gpm/ft^2)	0.5

Filtration rate (gpm/ft^2)	5
Backwash rate (gpm/ft^2)	15

SLUDGE HANDLING

Sludge Dewatering

The removal of pollutants or impurities from the wastestreams will result in the production of water insoluble compounds called sludge. It is desirable to minimize the volume of this waste product through sludge dewatering. The sludge volume reduction will be achieved by means of a thickener and mechanical dewatering device.

A thickener is comparable to a conventional settling tank except that the tank is deeper to accommodate a greater volume for sludge and has a heavier raking mechanism.

The mechanical dewatering device that will be used is a pressure filter because of the expected sludge dewaterability and desired cake dryness.

Design Basis:

Flow (gpm)	60
Thickener overflow rate (lb/ft^2/day)	8
Pressure filter cycle (hr)	2.5
Solid content (%)	40

BIOCIDE WASTESTREAMS

Present design of the Lauderdale Repowering Project does not include the installation of a dispensing system for injecting biocide into the circulating water system. Likewise, the existing plant does not use such biocides.

In the future, should biofouling become a serious problem in the circulating water system, FPL would evaluate the cause and all potential solutions to such a problem. Chlorination on an intermittent basis is the present preferred conventional method to control biofouling. Potential

alternatives include but are not limited to bromine chloride, chlorine dioxide, sodium bromide, ozonation, ultraviolet, and mechanical cleaning.

Should future conditions warrant the use of a biocide, FPL would request a modification to the Site Certification to allow such use, consistent with 40 CFR 423.13 (federal BAT); Chapter 17-3.121, F.A.C. (state Class III Water Quality Criteria); and BEQCB 27-5.081 (Broward County effluent limits).

Two biocides which are presently in use at the site will be used after repowering. They are both added to the fuel oil to prevent microbial growth. Biobor JF is an anti-microbe additive reported (MSDS, U.S. Borax and Chemical Corporation) to be an organoboron compound (mixed dioxaborinanes). It includes 5 percent naphtha. It is added to the oil at 1 part to between 55 and 4,500 parts oil when testing indicates microbial growth. Its toxicity is as follows:

Acute oral in albino rates--3.16 mL/kg.
Acute dermal LD_{50} in albino rates--4.64 mL/kg.
No known human experience.

Long-term stability additive (LTSA) is a mixture of amines, polyamines, and alkyl ammonium alkyl phosphate (MSDS, Fuel Quality Services, Inc.) with kerosene (58 percent) as the solvent. It is a combustible liquid. It is added to the oil at 1 part to 5,000 parts of oil.

CHEMICAL ADDITIVES

A list of the chemical additives presently used for various processes and systems at the plant is as follows:

1. Lime [calcium hydroxide, $Ca(OH)_2$)] is a basic compound used to adjust pH levels. It is used in raw water treatment (softening).
2. Polymer is a substance with a high molecular weight composed of repeating chemical units linked together into chain or network

structures. Used as a flocculent to enhance sedimentation and sludge dewatering.

3. Sulfuric acid (H_2SO_4) is an acidic compound used to reduce pH levels, is used in demineralizer regeneration and in pH adjustment before discharge to break oil emulsification and to aid in chemical precipitation.
4. Sodium Hydroxide (NaOH) is a basic compound used to raise pH levels, used in demineralizer regeneration, pH adjustment, and to aid in chemical precipitation.
5. Hydrazine (H_2NNH_2) is a strong reducing agent used as an oxygen scavenger to inhibit corrosion in steam generator condensate and feedwater.
6. Ammonia (NH_3) is a basic compound used to adjust pH levels in steam generator condensate and feedwater.
7. Tri-, di-, and mono-sodium phosphate are inorganic salts used in steam generator water to prevent scaling (deposition).
8. Molybdate is a substance used as a corrosion inhibitor in the closed side of an open cooling water system.
9. Tolyltriazole ($CH_2C_6H_3N_3H$) is a substance used as a corrosion inhibitor in the closed side of an open cooling water system.
10. Aluminum sulfate [alum, $Al_2(SO_4)_3$] is an inorganic salt used as a coagulant in separating emulsified oil from wastewater and for chemical precipitation.
11. Iron salts are inorganic salts used as a coagulant.
12. Diatomaceous earth is a natural material used in sludge dewatering.

APPENDIX 10.1.3

HAZARDOUS WASTE DISPOSAL APPLICATION/PERMIT

10.1.3 HAZARDOUS WASTE DISPOSAL APPLICATION/PERMIT

The Lauderdale Repowering project does not require a federal hazardous waste storage or treatment permit under the Resource Conservation and Recovery Act. A discussion of the project's hazardous waste management practice is contained in Section 3.7.2.

LEGAL DESCRIPTION OF PROPERTY SITUATED IN Broward COUNTY, FLORIDA
(Use additional sheets if necessary)

See Attachment 11

J. M. Small, Manager
Environmental Resources & Planning
Florida Power & Light Company

J. M. Small
Signature

Sworn and subscribed before me at Palm Beach County, Florida, this 24th day of November, 1989.

Notary Public
NOTARY PUBLIC STATE OF FLORIDA AT LARGE
MY COMMISSION EXPIRES FEB. 17, 1993
BONDED THRU AGENT'S NOTARY BROKERAGE

My commission expires:

12. Application is made for a permit(s) to authorize the activities described herein.

A. I authorize the agent listed in Item #2 to negotiate modifications or revisions, when necessary, and accept or assent to any stipulations on my behalf.

B. I understand I may have to provide any additional information/data that may be necessary to provide reasonable assurance or evidence to show that the proposed project will comply with the applicable State Water Quality Standards or other environmental standards both before construction and after the project is completed.

C. In addition, I agree to provide entry to the project site for inspectors with proper identification or documents as required by law from the environmental agencies for the purpose of making preliminary analyses of the site. Further, I agree to provide entry to the project site for such inspectors to monitor permitted work if a permit is granted.

D. Further, I hereby acknowledge the obligation and responsibility for obtaining all of the required state, federal or local permits before commencement of construction activities I also understand that before commencement of this proposed project I must be granted separate permits or authorizations from the U.S. Corps of Engineers, the U.S. Coast Guard, the Department of Environmental Regulation, and the Department of Natural Resources, as necessary.

I CERTIFY that I am familiar with the information contained in this application, and that to the best of my knowledge and belief such information is true, complete and accurate. I further certify that I possess the authority to undertake the proposed activities.

Signature of Applicant — Date: 11-24-89

NOTE: THIS APPLICATION MUST BE SIGNED by the person who desires to undertake the proposed activity or by an authorized agent. If an agent is applying on behalf of the applicant, attach proof of authority for the agent to sign and bind the applicant.

18 U.S.C. Section 1001 provides that: Whoever in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statement or entry, shall be fined not more than $10,000 or imprisoned not more than five years, or both.

NOTICE TO PERMIT APPLICANTS

This is a Joint Application; it is NOT a Joint Permit!

You Must Obtain All Required Local, State, and Federal

Authorizations or Permits Before Commencing Work!!

For your information: Section 370.034, Florida Statutes, requires that all dredge and fill equipment owned, used, leased, rented or operated in the state shall be registered with the Department of Natural Resources. Before selecting your contractor or equipment you may wish to determine if this requirement has been met. For further information, contact the Chief of the Bureau of Licenses and Motorboat Registration, Department of Natural Resources, 3900 Commonwealth Boulevard, Tallahassee, Florida 32303. Telephone Number 904/488-1195. THIS IS NOT A REQUIREMENT FOR A PERMIT FROM THE DEPARTMENT OF ENVIRONMENTAL REGULATION.

ATTACHMENT 7

DESCRIPTION OF PROJECT

#7 **Description of Project:**

Florida Power & Light Company (FPL) proposes to construct a Wastewater Treatment Area, an Equalization Basin and a construction parking/laydown area on approximately 2.5 acres of isolated wetland as shown on the attached drawings. The project is needed in order to allow for the "Repowering" of the existing Fort Lauderdale Power Plant. (See attached Chapter 1 of the Site Certification Application (SCA).)

The project involves first the removal of existing hardwood tree species (e.g. Acer rubrum, Annona glabra). Approximately 2,200 yd^3 of existing soils will then be removed to "demuck" the area to prepare the site for approximately 20,600 yd^3 of clean fill (sand and shellrock) which will be added, compacted and graded to the elevations shown on figures 5, 6 &7.

ATTACHMENT 10

REMARKS

#10 Remarks:

The proposed project is in an isolated wetland approximately 2.5 acres in size. A biological assessment indicated a mixture of a deciduous hardwood canopy and a herbaceous understory. The canopy is primarily red maple (Acer rubrum), pond apples (Annona glabra), red bay (Persea borbonia) and hackberry (Celtis laevigata). The understory includes both species of wild coffee (Psychotria nervosa and P. sulznerri) and several ferns including Osmunda regalis, Thelypteris dentata, Blechnum serrulatum, Achrostichum danaefolium, and Nephrolepis exaltata. The western side of the isolated wetland slopes up gradually with an associated transitional area of typical transition/disturbed plant species, including Saltbush (Baccharis sp.), Castor Bean (Ricinus communis), Madagascar periwinkle (Catharanthus roseus), Cesar's weed, (Urena lobata) and Royal Palm (Roystonea sp.).

There has been some invasion by exotics, with a number of scattered Melaleuca quinquenervia.

No endangered species were identified at the site, and thus the project is not expected to have any effect on any endangered plant or animal species.

Additionally, since the entire wetland is being filled in, with a berm around it, there will be no run-off or other turbidity related problems in any nearby wetland or waterway.

Clean fill will be used. The project is not designed to introduce any toxic, hazardous or otherwise deleterious materials into the environment.

LEGAL DESCRIPTION

TICOR TITLE INSURANCE

October 13, 1989

RE: Florida Power & Light Company Lauderdale Plant
Our File Number G-4848PG

This is to certify that we have examined the Public Records of Broward County, Florida, from Beginning through June 9, 1989 at 12:01 A.M. with regard to the following described property:

SEE ATTACHED EXHIBIT A

We find that apparent record to the above title is vested : in Florida Power & Light Company, a Florida Corporation.

We find the above described property is subject to the following:

SEE ATTACHED EXHIBIT B

This certificate is given in accordance with Section 177.041 Florida Statutes

TICOR TITLE INSURANCE COMPANY

10.1.4-17

LAUDERDALE PLANT BOUNDARY LEGAL DESCRIPTION:

A Portion of the Section 25, Township 50 South, Range 41 East and a portion of Sections 19, 20 and 30, Township 50 South, Range 42 East of Broward County, Florida; being more particularly described as follows:

Commence at the center of said Section 30-50-42, thence South 1 41' 18" East, along East line of the Southwest 1/4 of said Section 30, for 814.58 feet to the approximate centerline of the Dania Cut-Off Canal, being the Point of beginning of hereinafter described boundary:

From said Point of beginning, thence South 88 44' 30" West, along said approximate centerline, for 3247.52 feet to the intersection with the Easterly Right-of-Way line of the South New River Canal (C-11, 260" Wide R/W), as shown on "Route 441 Resourse Recovery Site" Plat recorded in Plat Book 132, at Page 41 P.R.B.C.F.; thence North 35 44' 42" East, along said Easterly Right-of-Way Line, for 450.45 feet; thence North 20 05' 06" East, continuing along said Easterly Right-of-Way Line, for 1200.99 feet to a Point on the common section line between Section 25-50-41 and Section 30-50-42; thence North 22 11' 30" East for 847.25 feet; thence North 22 17' 02" East, along Easterly line of Parcel 2-A, as described in Official Records Book 14269, at Page 344 P.R.B.C.F.; thence North 33 08' 26" East, continuing along Easterly line of said Parcel 2-a, for 321.26 feet; thence North 38 52' 20" E, Along last described line, for 390.68 feet; thence North 61 13' 50" East, continuing along Easterly line of said Parcel 2-A, for 667.79 feet to a point on the North line of the Northwest 1/4 of Section 30-50-42; thence South 88 56' 29" East, along said North line, also being the South line of Parcel 1, as described in Official Records Book 16063, at Page 576 P.R.B.C.F., for 974.55 feet to the North 1/4 corner; thence South 1 20' 31" East, along the East line of the Northwest 1/4 of Sec. 30-50-42, for 125.00 feet; thence North 66 27' 10" East, continuing along the Southerly line of last described Parcel 1, for 2444.55 feet; thence North 3 32' 19" West, along line 275 feet West of and Parallel to the East line of Section 19-50-42, for 180.00 feet; thence North 26 21' 15" East for 551.79 feet to a point on the common section line between Sec. 19-50-42 and Sec. 20-50-42; thence North 3 32' 19" West, along West line of said Section 20, for 460.00 feet to the Northwest corner of the South 1/2 of the North 1/2 of the Southwest 1/4 of said Section 20; thence North 89 20' 02" East, along North line of said South 1/2 of North 1/2 of Southwest 1/4 of Section 20, for 1276.06 feet; thence South 2 43' 26" East, along the West line of parcel described in Official Records Book 15765, at Page 565 P.R.B.C.F.; for 568.16 feet; thence South 3 59' 55" West, continuing along last described deed line, for 796.52 feet to a Point on the North line of the South 1/4 of the Southwest 1/4 of said Section 20; thence South 89 38' 50" West, along the North line of last described South 1/4, also being the North line of Parcel described in Official Records Book 13396, at Page 92 P.R.B.C.F., for 515.16 feet to the Northwest corner of the Southeast 1/4, of the Southwest 1/4, of the Southwest 1/4 of said Section 20; thence South 3 07' 49" East, along the West line of the Southeast 1/4, of Southwest 1/4, of Southwest 1/4 of Section 20, also being the West line of last described recorded parcel for 680.05 feet to the Southwest corner of said Southeast 1/4, Southwest 1/4, Southwest 1/4; thence South 89 48' 27" West, along the South line of the Southwest 1/4 of Section 20, for 643.77 feet to the Section corner common to Sections 19, 20, 29 and 30; thence South 1 41' 35" East, along the East

line of the Northeast 1/4 of said Section 30-50-42, for 678.23 feet; thence South 89 34' 28" West for 100.02 feet; thence South 1 41' 35" East, along a line 100 feet West of and parallel to the East line of said Northeast 1/4, for 900.00 feet; thence South 58 55' 51" West for 513.52 feet; thence South 0 59' 09" East for 150.00 feet; thence South 89 00' 51" West for 150.00 feet to the point of curvature of a circular to the left; thence Westerly and Southwesterly along the arc of said curve to the left, having for its elements, a central angle of 24 35' 20", a radius of 300.00 feet, for an arc distance of 128.75 feet to the point of tangent; thence South 64 25' 31" West for 250.00 feet; thence South 86 37' 11" West for 144.67 feet to the Northeast corner of parcel described in Official Records book 15188, at Page 433 P.R.B.C.F.; thence South 86 20' 16" West, along the North line of last described recorded parcel for 976.32 feet; thence South 1 41' 18" East along the West line of last described recorded parcel, for 400.00 feet; thence North 88 12' 52" West, along a line 40 feet North and parallel to the South line of the Northeast 1/4 of said Section 30, for 161.61 feet; thence South 89 09' 16" West for 138.70 feet; thence South 1 41' 18" East for 50.01 feet; thence South 89 09' 16" West for 100.01 feet to a point on the West line of the Southeast 1/4 of said Section 30; thence South 1 41' 18" East, along the West line of said Southeast 1/4, for 793.69 feet to the Point of Beginning; less that portion of the Dania cut-off canal which lies below the mean high waterline.

12. Application is made for a permit(s) to authorize the activities described herein.

A. I authorize the agent listed in Item #2 to negotiate modifications or revisions, when necessary, and accept or assent to any stipulations on my behalf.

B. I understand I may have to provide any additional information/data that may be necessary to provide reasonable assurance or evidence to show that the proposed project will comply with the applicable State Water Quality Standards or other environmental standards both before construction and after the project is completed.

C. In addition, I agree to provide entry to the project site for inspectors with proper identification or documents as required by law from the environmental agencies for the purpose of making preliminary analyses of the site. Further, I agree to provide entry to the project site for such inspectors to monitor permitted work if a permit is granted.

D. Further, I hereby acknowledge the obligation and responsibility for obtaining all of the required state, federal or local permits before commencement of construction activities. I also understand that before commencement of this proposed project I must be granted separate permits or authorizations from the U.S. Corps of Engineers, the U.S. Coast Guard, the Department of Environmental Regulation, and the Department of Natural Resources, as necessary.

I CERTIFY that I am familiar with the information contained in this application, and that to the best of my knowledge and belief such information is true, complete and accurate. I further certify that I possess the authority to undertake the proposed activities.

Signature of Applicant — Date: 11-24-89

NOTE: THIS APPLICATION MUST BE SIGNED by the person who desires to undertake the proposed activity or by an authorized agent. If an agent is applying on behalf of the applicant, attach proof of authority for the agent to sign and bind the applicant.

18 U.S.C. Section 1001 provides that: Whoever in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statement or entry, shall be fined not more than $10,000 or imprisoned not more than five years, or both.

NOTICE TO PERMIT APPLICANTS

This is a Joint Application; it is NOT a Joint Permit!

You Must Obtain All Required Local, State, and Federal

Authorizations or Permits Before Commencing Work!!

For your information: Section 370.034, Florida Statutes, requires that all dredge and fill equipment owned, used, leased, rented or operated in the state shall be registered with the Department of Natural Resources. Before selecting your contractor or equipment you may wish to determine if this requirement has been met. For further information, contact the Chief of the Bureau of Licenses and Motorboat Registration, Department of Natural Resources, 3900 Commonwealth Boulevard, Tallahassee, Florida 32303. Telephone Number 904/488-1195. THIS IS NOT A REQUIREMENT FOR A PERMIT FROM THE DEPARTMENT OF ENVIRONMENTAL REGULATION.

ATTACHMENT 7

DESCRIPTION OF PROJECT

#7 **Description of Project:**

Florida Power & Light Company (FPL) proposes to fill in a previously excavated canal on it's property at the Fort Lauderdale Power Plant Site in Broward County. The project site is shown on the attached drawings (figures 1-7). The canal was constructed over 40 years ago for use as an intake/discharge canal for the old power plant. The canal is now obsolete and the area is needed for the current plant expansion/repowering project (see attached chapter 1, Site Certification Application (SCA).)

The profiles of the existing canal are shown on figures 5, 6 & 7. FPL proposes to use fill material from on-site to fill in the 1.24 acres of open water and the <0.1 acres of wetland area. The canal will be filled in to an elevation of +4' MSL.

In order to prevent any violation of water quality standards in the adjacent Dania cut-off canal and South New River Canal, FPL proposes to seal the canal off from those waters prior to any filling work. Where the canal adjoins the Dania cut-off Canal, FPL will install a coffer dam or sheet-pile barrier at a location consistent with shoreline on each side. At the junction of the canal and the South New River Canal, FPL proposes to install a sheetpile barrier which will again isolate the are to be filled from the adjacent waters of the State. Once these barriers are in place the canal will be filled, graded and compacted to a consistent elevation of +4' MSL.

ATTACHMENT 10

REMARKS

#10 Remarks:

FPL requires the use of the project area as part of the "repowering" project to provide reliable cost efficient electrical power to existing and future Florida residents. Because this man-made canal is no longer required, this option is more favorable than impacting existing forested wetland areas. There is a narrow fringe of existing wetland (<0.1 acres) which will be removed, but the contribution of this wetland to the ecosystem is insignificant. There are no submerged seagrasses or mangroves that will be removed by this project. Additionally, since there is a connection between the Dania cut-off Canal and the South New River Canal, the proposed project will have no significant effect on the marine fisheries or the movement of aquatic organisms from one canal to the other.

The work will be performed when there are no manatees in the area, so the proposed project is not expected to have any effect on manatees or any other endangered or threatened animal or plant species.

No toxic, hazardous or otherwise deleterious agents will be introduced into the aquatic environment and therefore the project is expected to have an insignificant effect on the environment.

LEGAL DESCRIPTION

TICOR TITLE INSURANCE

October 13, 1989

RE: Florida Power & Light Company Lauderdale Plant
Our File Number G-4848PG

This is to certify that we have examined the Public Records of Broward County, Florida, from Beginning through June 9, 1989 at 12:01 A.M. with regard to the following described property:

SEE ATTACHED EXHIBIT A

We find that apparent record to the above title is vested : in Florida Power & Light Company, a Florida Corporation.

We find the above described property is subject to the following:

SEE ATTACHED EXHIBIT B

This certificate is given in accordance with Section 177.041 Florida Statutes

TICOR TITLE INSURANCE COMPANY

Ticor Title Insurance Company Suite A, Airport Corp. Center, 7255 N.W. 19th Street, Miami, Florida 33126 (305)-594-2171

LAUDERDALE PLANT BOUNDARY LEGAL DESCRIPTION:

A Portion of the Section 25, Township 50 South, Range 41 East and a portion of Sections 19, 20 and 30, Township 50 South, Range 42 East of Broward County, Florida; being more particularly described as follows:

Commence at the center of said Section 30-50-42, thence South 1 41' 18" East, along East line of the Southwest 1/4 of said Section 30, for 814.58 feet to the approximate centerline of the Dania Cut-Off Canal, being the Point of beginning of hereinafter described boundary:

From said Point of beginning, thence South 88 44' 30" West, along said approximate centerline, for 3247.52 feet to the intersection with the Easterly Right-of-Way line of the South New River Canal (C-11, 260" Wide R/W), as shown on "Route 441 Resourse Recovery Site" Plat recorded in Plat Book 132, at Page 41 P.R.B.C.F.; thence North 35 44' 42" East, along said Easterly Right-of-Way Line, for 450.45 feet; thence North 20 05' 06" East, continuing along said Easterly Right-of-Way Line, for 1200.99 feet to a Point on the common section line between Section 25-50-41 and Section 30-50-42; thence North 22 11' 30" East for 847.25 feet; thence North 22 17' 02" East, along Easterly line of Parcel 2-A, as described in Official Records Book 14269, at Page 344 P.R.B.C.F.; thence North 33 08' 26" East, continuing along Easterly line of said Parcel 2-a, for 321.26 feet; thence North 38 52' 20" E, Along last described line, for 390.68 feet; thence North 61 13' 50" East, continuing along Easterly line of said Parcel 2-A, for 667.79 feet to a point on the North line of the Northwest 1/4 of Section 30-50-42; thence South 88 56' 29" East, along said North line, also being the South line of Parcel 1, as described in Official Records Book 16063, at Page 576 P.R.B.C.F., for 974.55 feet to the North 1/4 corner; thence South 1 20' 31" East, along the East line of the Northwest 1/4 of Sec. 30-50-42, for 125.00 feet; thence North 66 27' 10" East, continuing along the Southerly line of last described Parcel 1, for 2444.55 feet; thence North 3 32' 19" West, along line 275 feet West of and Parallel to the East line of Section 19-50-42, for 180.00 feet; thence North 26 21' 15" East for 551.79 feet to a point on the common section line between Sec. 19-50-42 and Sec. 20-50-42; thence North 3 32' 19" West, along West line of said Section 20, for 460.00 feet to the Northwest corner of the South 1/2 of the North 1/2 of the Southwest 1/4 of said Section 20; thence North 89 20' 02" East, along North line of said South 1/2 of North 1/2 of Southwest 1/4 of Section 20, for 1276.06 feet; thence South 2 43' 26" East, along the West line of parcel described in Official Records Book 15765, at Page 565 P.R.B.C.F.; for 568.16 feet; thence South 3 59' 55" West, continuing along last described deed line, for 796.52 feet to a Point on the North line of the South 1/4 of the Southwest 1/4 of said Section 20; thence South 89 38' 50" West, along the North line of last described South 1/4, also being the North line of Parcel described in Official Records Book 13396, at Page 92 P.R.B.C.F., for 515.16 feet to the Northwest corner of the Southeast 1/4, of the Southwest 1/4, of the Southwest 1/4 of said Section 20; thence South 3 07' 49" East, along the West line of the Southeast 1/4, of Southwest 1/4, of Southwest 1/4 of Section 20, also being the West line of last described recorded parcel for 680.05 feet to the Southwest corner of said Southeast 1/4, Southwest 1/4, Southwest 1/4; thence South 89 48' 27" West, along the South line of the Southwest 1/4 of Section 20, for 643.77 feet to the Section corner common to Sections 19, 20, 29 and 30; thence South 1 41' 35" East, along the East

line of the Northeast 1/4 of said Section 30-50-42, for 678.23 feet; thence South 89 34' 28" West for 100.02 feet; thence South 1 41' 35" East, along a line 100 feet West of and parallel to the East line of said Northeast 1/4, for 900.00 feet; thence South 58 55' 51" West for 513.52 feet; thence South 0 59' 09" East for 150.00 feet; thence South 89 00' 51" West for 150.00 feet to the point of curvature of a circular to the left; thence Westerly and Southwesterly along the arc of said curve to the left, having for its elements, a central angle of 24 35' 20", a radius of 300.00 feet, for an arc distance of 128.75 feet to the point of tangent; thence South 64 25' 31" West for 250.00 feet; thence South 86 37' 11" West for 144.67 feet to the Northeast corner of parcel described in Official Records book 15188, at Page 433 P.R.B.C.F.; thence South 86 20' 16" West, along the North line of last described recorded parcel for 976.32 feet; thence South 1 41' 18" East along the West line of last described recorded parcel, for 400.00 feet; thence North 88 12' 52" West, along a line 40 feet North and parallel to the South line of the Northeast 1/4 of said Section 30, for 161.61 feet; thence South 89 09' 16" West for 138.70 feet; thence South 1 41' 18" East for 50.01 feet; thence South 89 09' 16" West for 100.01 feet to a point on the West line of the Southeast 1/4 of said Section 30; thence South 1 41' 18" East, along the West line of said Southeast 1/4, for 793.69 feet to the Point of Beginning; less that portion of the Dania cut-off canal which lies below the mean high waterline.

1.0 INTRODUCTION

The Florida Power & Light Company (FPL) Lauderdale Plant is located in eastern Broward County, about 1 mile east of the Florida Turnpike and 1 mile west of Interstate Highway 95 (Figure 1-1). Currently, the FPL Lauderdale Plant consists of two fossil-fuel steam generating units (Units 4 and 5) and 24 gas turbines (GT 1 through GT 24) with a total plant net summer electric generating capability of 1,126 megawatts (MW) (1,248 MW net, winter). All of these units are designed to burn either natural gas or oil.

FPL is proposing a Lauderdale Repowering Project at the Lauderdale Plant site, which will consist of replacing the existing steam generators for Units 4 and 5 with combustion turbines (CTs) and heat recovery steam generators (HRSGs) operating as a combined cycle plant. Each repowered unit will consist of two CTs, each with its own HRSG. The CTs directly drive electric generators to produce electric power. The exhaust gases from the CTs exhaust through the HRSGs, producing steam in the HRSGs. This steam will essentially replace the steam presently generated by Units 4 and 5 steam generators and will be used in the existing steam turbines. The existing Units 4 and 5 electric generators and condenser cooling system will also remain in service as part of the repowered units. A map of the Lauderdale Plant site, indicating both the existing units and the proposed units, is presented in Figure 1-2.

The combined cycle power plant will burn natural gas as the primary fuel and No. 2 fuel oil as an alternate fuel. Each repowered unit will have a nominal generating capacity of 480 MW. Each CT/HRSG train will be served by an individual stack.

The Lauderdale Repowering Project will result in increases in air emissions over current emissions from the Lauderdale Plant. The U.S. Environmental Protection Agency (EPA) has promulgated regulations which require a prevention of significant deterioration (PSD) review for new or modified sources which increase emissions of regulated air pollutants

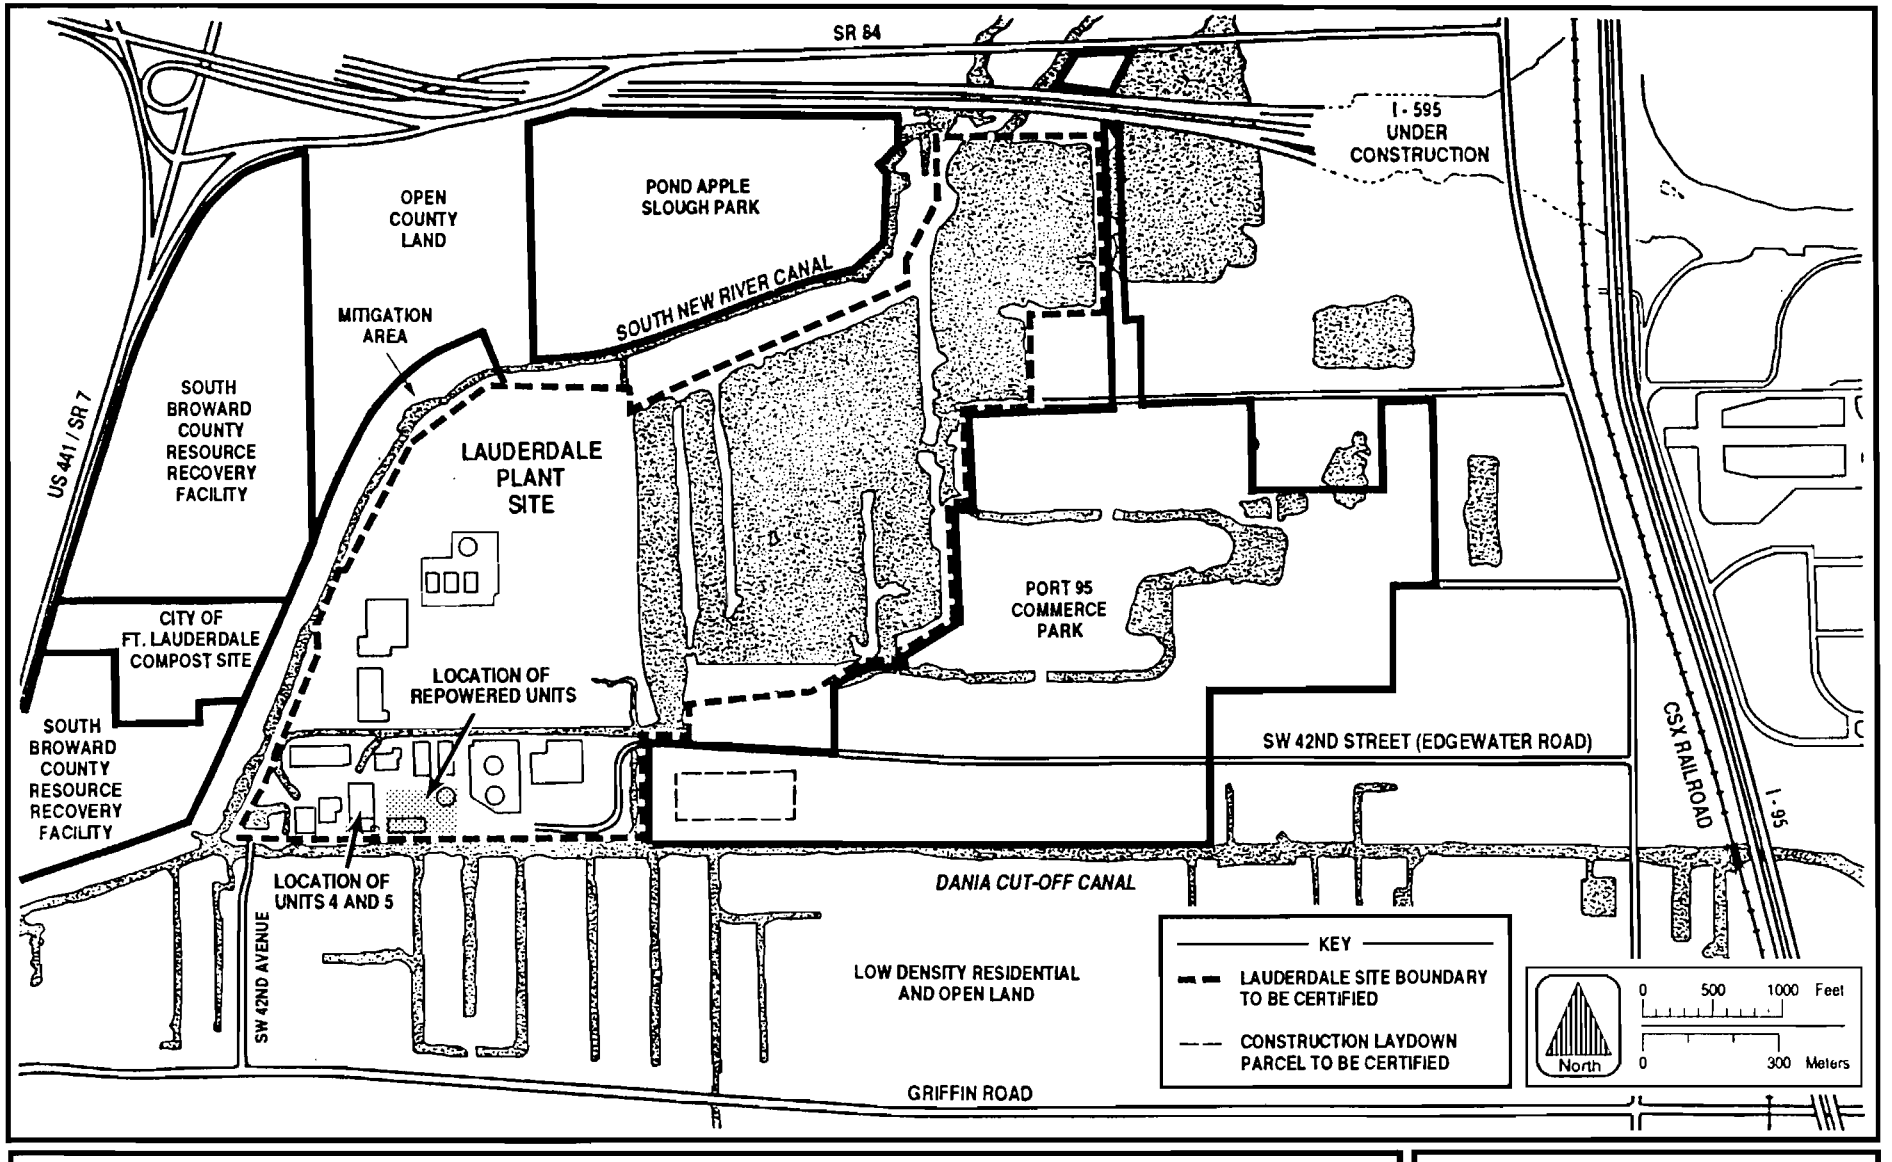

Figure1-2 LAUDERDALE SITE MAP

Lauderdale
Repowering
Project

FPL

above certain threshold amounts. Because the threshold amounts will be exceeded for certain emissions by the project, the project is subject to PSD review. Federal PSD regulations are promulgated under 40 Code of Federal Regulations (CFR) Part 52.21 and implemented through Florida Department of Environmental Regulation (FDER) air quality regulations. FDER's PSD regulations are codified in Chapter 17-2.500, Florida Administrative Code (F.A.C.).

Broward County is part of a three county area, which includes Dade and Palm Beach Counties, that have been designated as nonattainment for ozone. Any emissions of volatile organic compounds (VOC), the pollutant regulated in ozone nonattainment areas, must be addressed according to FDER Rule 17-2.510 F.A.C. Operational limitations are requested in this air permit application that would restrict existing and new VOC emissions from the Lauderdale Plant and repowered units. These limitations would bring the VOC emissions from the plant and repowered units under the threshold amounts requiring nonattainment review.

The technical information and analysis required by the federal and state PSD regulations are contained in this application. Although this document is an appendix to the Site Certification Application (SCA) for the facility, it has been prepared as a stand-alone application since EPA and other agencies may review the PSD application separately. The application is divided into eight major sections. Presented in Section 2.0 is a description of the facility, including air emissions and stack parameters. Air quality review requirements and applicability are presented in Section 3.0. The control technology review, including the Best Available Control Technology (BACT) evaluation, is presented in Section 4.0. Air quality monitoring information is presented in Section 5.0, and the methodology and results of the impact analyses performed for the project are presented in Sections 6.0, 7.0, and 8.0. Section 9.0 addresses nonattainment. Appendix D contains FDER Form 17-1.202(1).

2.0 PROJECT DESCRIPTION

2.1 GENERAL DESCRIPTION

The repowered Units 4 and 5 will each consist of two CTs and two HRSGs (i.e., a total of four CTs and four HRSGs for the two units). Each CT will be served by a single HRSG, exhausting to an individual stack. There will be no bypass stacks on the CTs for simple cycle operation; simple cycle operation will be accomplished by passing the exhaust gases through the HRSGs and diverting steam from the HRSGs directly to the condenser. A flow diagram of the project is presented in Figure 2-1.

The CTs will be capable of firing either natural gas or No. 2 distillate fuel oil. There will be supplementary firing of natural gas only in the HRSGs.

Steam injection will be used to control emissions of nitrogen oxides (NO_x) from the CTs. The use of natural gas or low-sulfur (0.5-percent sulfur or less) No. 2 fuel oil will minimize the emissions of sulfur dioxide (SO_2) from the units.

Air emission sources associated with the repowering project consist of the CTs, HRSGs, and fuel oil storage tanks. Storage of No. 2 fuel oil on-site will result in very minor emissions of volatile organic compounds. No. 6 fuel oil is currently stored on-site for Units 4 and 5.

The existing fossil-fuel steam generators for Units 4 and 5 will be retired upon completion of the repowering project. These units presently burn natural gas and/or No. 6 fuel oil. Shutdown of these existing units will result in creditable emission decreases.

Lauderdale Repowering Project

FPL

2.2 FACILITY EMISSIONS AND STACK OPERATING PARAMETERS

The performance information and stack parameters that envelope the CT manufacturers' designs currently being considered for the project are presented in Table 2-1. The volumetric flow rates that will be encountered over the range of ambient operating conditions and for the worst-case fuel (i.e., No. 2 fuel oil) are presented in this table.

Maximum emission rates for regulated criteria pollutants, regulated non-criteria pollutants, and nonregulated pollutants from each CT are presented in Tables 2-2, 2-3, and 2-4, respectively. Detailed performance information and stack parameters for each fuel (natural gas or No. 2 fuel oil) are presented in Appendix A. These design data include operation over the expected range of ambient conditions encountered at the site (40°F to 95°F).

Supplemental firing with natural gas will take place in the duct between each CT and its associated HRSG. The supplemental firing, at a maximum rate of 90.62 million British thermal units per hour (x 10^6 Btu/hr), will allow the HRSG to produce additional steam and therefore allow greater electrical power generation in the steam turbine/generator. The firing of natural gas will produce additional air emissions, as shown in Tables 2-2 through 2-4 for the maximum firing rate. These emissions will combine with the CT exhaust gases only during natural gas firing and exhaust through the HRSG stack.

Maximum air quality impacts due to operation of the repowered units will be a function of emission rate and plume rise. Review of the available design information shows that maximum emissions occur when burning No. 2 fuel oil, except in the case of mercury and polycyclic organic matter (POM). Both natural gas burning and No. 2 fuel oil burning result in similar exhaust gas flow rates (which are directly related to plume rise). As a result, worst-case operating parameters were based upon burning No. 2 fuel oil. Worst-case emissions also occur when operating at 40°F ambient temperature.

Table 2-1. Design Information and Stack Parameters for Lauderdale Repowering Project--for Each Combustion Turbine (CT)

Parameter	No.2 Oil at 40°F	No.2 Oil at 95°F
General		
Power (kW)	172,290	151,480
Heat Rate (Btu/kWh)	9,830	10,335
Heat Input (10^6 Btu/hr)	1,693.6	1,565.5
Fuel Oil (lb/hr)	88,531.7	81,837.2
Fuel		
Oil--HHV (Btu/lb)	19,130	19,130
Sulfur (%)	0.5	0.5
Gas Turbine Exhaust Conditions		
Volume Flow (acfm)	2,422,969	2,283,495
Volume Flow (scfm)	852,885	759,726
Mass Flow (lb/hr)	3,753,920	3,311,950
Temperature (°F)	1,040	1,127
Moisture (%)	11.23	83
Oxygen (%)	12.14	15
Molecular Weight	28.27	27.89
Steam Injected (lb/hr)	155,080	143,630
Stack Exhaust Conditions		
Temperature (°F)	280	280
Volume Flow (acfm)	1,195,331	1,064,768
Diameter (ft)	18	18
Velocity (ft/sec)	78.3	69.7
Height (ft)	150	150

Note: Based on one CT/HRSG operating at full load.

acfm = actual cubic feet per minute.
10^6 Btu/hr = million British thermal units per hour.
Btu/kWh = British thermal unit per kilowatt hour.
ft/sec = feet per second.
HHV = high heating value.
kW = kilowatt.
lb/hr = pounds per hour.
scfm = standard cubic feet per minute.

Table 2-2. Maximum Criteria Pollutant Emissions for Lauderdale Repowering Project

Pollutant	CT Maximum Emissions[a]	Supplemental Firing Emissions
Particulate[b]		
Basis	Design	Design

[a]Maximum emissions at ISO conditions and oil firing unless otherwise noted.
[b]Maximum emissions are based upon natural gas firing.

Note: neg. = negligible.
pg/J = picograms per Joule.
POM = polycyclic organic matter.

Lowest exhaust gas volumetric flow from the repowered units occurs under 95°F operation. Since this condition results in the lowest plume rise of the exhaust gases and potentially higher impacts than the maximum emission rate case (40°F), stack data for this case were used in the air quality impact analysis.

The CTs will be subject to federal New Source Performance Standards (NSPS) for gas turbines. The NSPS, described in Section 4.2, limit emissions of sulfur dioxide and nitrogen oxides.

The existing 150,000-barrel (bbl) tank, currently used for No. 6 fuel oil storage, will be converted for storage of No. 2 fuel oil. A 55,000-bbl tank, currently used to store No. 2 fuel oil for the GTs will be removed. Two other existing tanks with capacities of 80,000 and 75,000 bbls will be used for No. 2 fuel oil storage. Table 2-5 presents the maximum estimated emissions of volatile organic compounds (VOCs) from these storage tanks; VOCs are the only pollutant emitted by working and breathing vapor losses.

Table 2-6 presents a summary of the maximum potential air emissions from the repowering project. Emission rates in tons per year (TPY) are shown for four CTs, four HRSGs, the storage tank, and the total for both repowered Units 4 and 5. The total CT emissions for all pollutants except VOCs are based on full load operating conditions at 75°F ambient temperature, the average annual temperature for the area. With the exception of mercury (Hg) emissions, maximum annual emissions of regulated pollutants will result from No. 2 fuel oil burning. Emissions from the HRSGs are not additive to the CT emissions in this table, except for mercury, since the duct burners will only be fired with natural gas.

Table 2-5. Maximum Emissions of VOCs From Storage Tanks

Description	No. 3 Tank New	No. 3 Tank Old	No. 2 Tank Potential	No. 4 Tank Removed	No. 5 Tank Potential
Type of Liquid Stored	No. 2 Fuel Oil	No. 6 Fuel Oil	No. 2 Fuel Oil	No. 2 Fuel Oil	No. 2 Fuel Oil
Tank Volume (gallons)	6,300,000	6,300,000	3,360,000	2,310,000	3,150,000
Total Annual Throughput (gallons)	418,965,980	29,429,000	515,968,586	806,260	515,968,586

(tons/yr)	1.9	0.09	1.2	0.8	1.1
Working Losses (lb/yr)	6862.7	10.1	6761.3	26.4	6761.3
(tons/yr)	3.4	0.0050	3.4	0.0	3.4
Total Emissions (tons/yr)	5.3	0.1	4.5	0.9	4.5

Table 2-6. Summary of Maximum Average Regulated Air Emissions From the Lauderdale Repowering Project

Pollutant	4 CTs/HRSGs[a] (TPY)	Storage Tank (TPY)	Total[b] (TPY)
Particulate Matter[c]	824.6	NA	824.6
Sulfur Dioxide[c]	12,232.2	NA	12,232.2
Nitrogen Oxides[c]	5,998.8	NA	5,998.8
Carbon Monoxide[d]	1,658.8	NA	1,658.8
Volatile Organic Compounds[c]	111.0	4.3[e]	115.3
Lead[c]	0.21	NA	0.21
Arsenic[c]	0.098	NA	0.098
Beryllium[c]	0.058	NA	0.058
Mercury[d]	0.352	NA	0.352
Fluorides[c]	0.759	NA	0.766
Sulfuric Acid Mist[c]	1,525	NA	1,525

[a]HRSGs only fired with natural gas and when natural gas is fired in CT.
[b]Does not include creditable emission decreases for Units 4 and 5.
[c]Based on oil firing at 75°F ambient temperature and 81.1 percent capacity factor (operation at full load).
[d]Based on natural gas firing at 75°F ambient temperature and 100 percent capacity factor; includes emissions from HRSGs, i.e., 96.4 TPY for CO and 0.014 TPY for mercury.
[e]Net emissions increase from storage tanks (Tank No. 3 with No. 2 fuel oil minus Tank No. 3 on No. 6 oil minus Tank No. 4 on No. 2 fuel oil: 5.3 - 0.1 - 0.9 = 4.3).

Note: NA = not applicable.
neg. = negligible.
TPY = tons per year.

The net increase in VOC emissions from storage tanks is based on: increase in VOCs from No. 2 fuel oil assuming all oil for the repowered units is handled from the large No. 3 storage tank, decrease in VOCs from No. 6 fuel oil handled in the No. 3 storage tank and the decrease in VOCs from removing the No. 4 storage tank.

VOC emissions from the repowered units will be limited by annual average heat input restrictions on firing No. 2 fuel oil and natural gas. Natural gas will only be used for supplemental firing. In addition, supplemental firing will only occur concurrent with natural gas firing in the CTs. The CT/HRSG heat input would be restricted based on the limitations presented in Table 2-7. These operating restrictions would limit the CTs to emit no more than 111.0 tons/year.

Fuel specifications for natural gas and distillate oil for the Lauderdale Repowering Project are presented in Tables 2-8 and 2-9.

2.3 EXISTING UNITS 4 AND 5

The existing Units 4 and 5 fossil-fuel-fired steam generating units will be taken out of service prior to completion of the Repowering Project. Operation of these units has varied over their history to respond to electric demand. Without the repowering project, these units would be expected to be operated at levels higher than in recent years. These units have burned both natural gas and No. 6 fuel oil and do not have annual operating restrictions for either fuel. Because of the varied nature of operation, the last 2 years of fuel usage information is not representative of actual emissions for which the facility has previously emitted or has the potential to emit. Therefore, the last 20 years were considered as representative for calculating actual emissions. Presented in Table 2-10 are the hours of operation and quantities of fuel burned in each unit from 1969 to 1988. Actual representative air emissions from Units 4 and 5 were calculated on the basis of the average fuel usage. Emission factors were obtained from EPA publication AP-42 and other publications (see Appendix B for references).

Table 2-7. Annual Heat Input Limitations for Repowered Units Turbine

	Natural Gas[a]				No.2 Fuel Oil			Total	
	Capacity Factor[b] (%)	Heat Input (10^9 Btu)	VOCs (TPY)		Capacity Factor[b] (%)	Heat Input (10^{12} Btu)	VOCs (TPY)	Capacity Factor[b] (%)	VOCs (TPY)
If the Capacity Factor and Associated Heat Input on Natural Gas is equal to:	0.0	0.0	0.0	Then the Capacity Factor and Associated Heat Input on No. 2 Fuel Oil can be equal to or less than:	81.1	46,834.2	111.0	81.1	111.0

	80.0	47,526.0	40.7		20.0	11,544.0	27.4	100.0	68.1
	85.0	50,496.4	43.3		15.0	8,658.0	20.5	100.0	63.8
	90.0	53,466.8	45.8		10.0	5,772.0	13.7	100.0	59.5
	95.0	56,437.1	48.4		5.0	2,886.0	6.8	100.0	55.2
	100.0	59,407.5	50.9		0.0	0.0	0.0	100.0	50.9

[a]Natural gas firing includes both CT and supplemental firing; the ammount of supplemental firing is proportional to CT capacity factor.
[b]Capacity Factor in this context is the percent of full load operation at 75°F ambient conditions.

Table 2-8. Representative Natural Gas Composition for Lauderdale Repowering Project

Parameter	Specification
Constituents	
Hydrogen (H_2)	--
Methane (CH_4)	83.40% by volume

Nitrogen (N_2)	0.76% by weight
Oxygen (O_2)	1.236% by weight
Heat Content	
Btu/ft^3 (HHV)	950 (min) - 1,124
Btu/lb of Fuel (HHV)	23,170
(LHV)	20,870

[a]2 grains/1,000 scf, the maximum permissible pipeline sulfur content is 200 gr/1,000 ft^3.

Note: Btu/ft^3 = British thermal units per cubic feet.
HHV = high heating value.
LHV = low heating value.

Table 2-9. Representative Fuel Oil Composition for Lauderdale Repowering Project

Parameter	Specification
Specific gravity, 60°F	.82 - 0.86
Heat of Combustion	19,130 Btu/lb
Carbon	87% by weight
Oxygen	0% by weight
Sulfur	0.5% (maximum) by weight
Nitrogen	0.02% by weight
Hydrogen	12.5% by weight
Ash (fuel as delivered)	0.05% by weight
Trace metal contaminants (untreated)	
Sodium plus potassium	1 ppm (maximum)
Vanadium	0.5 ppm (maximum)
Lead	1 ppm (maximum)
Calcium	2 ppm (maximum)

Note: Btu/lb = British thermal units per pound.
ppm = parts per million.

Table 2-10. Hours of Operation and Fuel Usage for Lauderdale Units 4 and 5

Year	Unit 4 Operation (hours)	Unit 4 Natural Gas (10^6 ft^3)	Unit 4 No. 6 Fuel Oil (10^3 gal)	Unit 5 Operation (hours)	Unit 5 Natural Gas (10^6 ft^3)	Unit 5 No. 6 Fuel Oil (10^3 gal)
1988	1,623	1,279	3,460	2,317	1,937	3,948
1987	2,086	2,110	993	2,173	2,089	1,785
1986	1,615	1,857	0	2,113	2,356	468
1985	1,876	2,103	983	1,289	1,309	1,343

1971	6,671	4,525	403	8,414	5,610	22,384
1970	8,449	6,015	18,358	8,681	6,769	328
1969	7,030	3,753	13,440	6,984	3,811	11,970
Average	4,634	2,595	15,070	4,876	2,803	15,546

Note: 10^6 ft^3 = million cubic feet.
10^3 gal = thousand gallons.

The emission factors and resulting emissions for all regulated pollutants are shown in Table 2-11. Sulfur dioxide emissions were determined using the actual sulfur content in No. 6 fuel oil for the last 2 years, which is representative of the quality of fuel used in these units. The average sulfur content during 1987 and 1988 was 0.964 percent.

Maximum operating parameters and maximum sulfur dioxide, particulate matter, and nitrogen oxides emissions associated with the existing Units 4 and 5 are presented in Table 2-12.

2.4 EXISTING GAS TURBINE UNITS 1 THROUGH 24

There are 24 identical GT peaking units currently operating at the Lauderdale Plant. These units are used for peaking purposes to meet load demands and operate intermittently. The units can operate on either natural gas or No. 2 fuel oil. Maximum operating parameters and air emission rates from these existing units are presented in Table 2-12.

The operation GTs will also be limited so that the total potential VOC emissions plus that of their associated storage tanks (i.e., assuming maximum throughput from GTs 1 through 12 using No. 2 storage tank and from GTs 13 through 24 using No. 5 storage tank) will be less than 100 TPY. The maximum storage tank emissions are 9 TPY which results in a VOC limitation on the GTs of 90.9 TPY. The annual heat input limitations for the GTs are presented in Table 2-13. These limitations more accurately reflect the actual operating conditions of the GTs. Since they began operation in the early 1970s, the actual average VOC emissions were 5.77 TPY.

All VOC emission calculations for the existing GTs were based on data developed from stack testing. This stack testing consisted of performing Method 25A analyses and excluding all methane and ethane in the gas stream as allowed under Rule 17-2.100(223) F.A.C. The description of testing and the VOC calculations are presented in Appendix C.

Table 2-11. Actual Representative Emissions of Regulated Pollutants, Lauderdale Units 4 and 5

Parameter	Unit No. 4 Natural Gas	Unit No. 4 No. 6 Fuel Oil	Unit No. 5 Natural Gas	Unit No. 5 No. 6 Fuel Oil	TOTAL

[a]Total emissions from identified units.

[b]Units 4 and 5 will be shut down when the proposed units become operational.

[c]Effective stack diameter based on actual stack area.

Note: All operational and emissions data based on FDER permitted rates. The following permits are relevant: Unit 4-AO-06-146594; Unit 5-AO-06-143213; GT Units 1-2 AO-06-148760 and GT Units 13-24 AO-06-148761.

Table 2-13. Annual Heat Input Limitations for Gas Turbines

	Natural Gas				No.2 Fuel Oil			Total	
	Capacity Factor[a] (%)	Heat Input (10^9 Btu)	VOCs (TPY)		Capacity Factor[a] (%)	Heat Input (10^9 Btu)	VOCs (TPY)	Capacity Factor[a] (%)	VOCs (TPY)
If the Capacity Factor and Associated Heat Input on Natural Gas is equal to:	0.0	0.0	0.0	Then the Capacity Factor and Associated Heat Input on No. 2 Fuel Oil can be equal to or less than:	98.6	139,911.1	90.9	98.59	90.9
	5.0	7,379.4	12.5		85.0	120,602.1	78.4	89.98	90.9
	10.0	14,758.8	25.1		71.4	101,293.2	65.8	81.38	90.9
	15.0	22,138.3	37.6		57.8	81,984.2	53.3	72.77	90.9
	20.0	29,517.7	50.2		44.2	62,675.2	40.7	64.16	90.9
	25.0	38,897.1	62.7		30.6	43,366.3	28.2	55.56	90.9
	30.0	44,276.5	75.3		17.0	24,057.3	15.8	48.95	90.9
	35.0	51,656.0	87.8		3.3	4,748.4	3.1	38.35	90.9
	36.2	53,470.7	90.9		0.0	(0.0)	0.0	36.23	90.9

[a]Capacity factor in this context is the percent of full load operation at 75°F ambient conditions.

2.5 SITE LAYOUT AND STRUCTURES

Site plans of the Lauderdale Plant, both before and after the repowering project is completed, are shown in Figures 2-2 and 2-3. The four new CTs and HRSGs will be located just east of the existing Units 4 and 5 steam generator buildings and steam turbine building. The Units 4 and 5 steam generator buildings and stacks will be dismantled upon retirement of the units. The locations of the existing gas turbine units (GT1-GT24) are also shown on the site plan. These locations will not change with the implementation of the repowering project.

A profile view of the environmental enclosure for the CTs, air inlet filters, HRSGs, and discharge stacks is presented in Figures 2-4 and 2-5. The principal structures associated with the facility are the environmental enclosure for the CTs (74.5 ft high), the HRSGs (61 ft high), and the stacks (150 ft high).

3.0 AIR QUALITY REVIEW REQUIREMENTS AND APPLICABILITY

The following discussion pertains to the federal and state air regulatory requirements and their applicability to the Lauderdale Repowering Project. These regulations must be satisfied before the proposed facility can begin operation.

3.1 NATIONAL AND STATE AAQS

The existing applicable national and Florida ambient air quality standards (AAQS) are presented in Table 3-1. Primary national AAQS were promulgated to protect the public health, and secondary national AAQS were promulgated to protect the public welfare from any known or anticipated adverse effects associated with the presence of pollutants in the ambient air. Areas of the country in violation of AAQS are designated as nonattainment areas, and new sources to be located in or near these areas may be subject to more stringent air permitting requirements.

3.2 PSD REQUIREMENTS

3.2.1 General Requirements

Under federal and State of Florida PSD review requirements, all major new or modified sources of air pollutants regulated under the Clean Air Act (CAA) must be reviewed and a preconstruction permit issued. Florida's State Implementation Plan (SIP), which contains PSD regulations, has been approved by EPA, and therefore PSD approval authority has been granted to FDER.

A "major facility" is defined as any one of 28 named source categories which has the potential to emit 100 tons per year (TPY) or more, or any other stationary facility which has the potential to emit 250 TPY or more of any pollutant regulated under CAA. "Potential to emit" means the capability, at maximum design capacity, to emit a pollutant after the application of control equipment.

Table 3-1. National and State AAQS, Allowable PSD Increments, and Significance Levels ($\mu g/m^3$)

Pollutant	Averaging Time	AAQS National Primary Standard	AAQS National Secondary Standard	AAQS State of Florida	PSD Increments Class I	PSD Increments Class II	Significant Impact Levels
Particulate Matter (TSP)	Annual Geometric Mean	NA	NA	NA	5	19	1
	24-Hour Maximum[a]	NA	NA	NA	10	37	5
Particulate Matter (PM10)	Annual Arithmetic Mean	50	50	50	4[c]	17[c]	1
	24-Hour Maximum[b]	150	150	150	8[c]	30[c]	5
Sulfur Dioxide	Annual Arithmetic Mean	80	NA	60	2	20	1
	24-Hour Maximum[b]	365	NA	260	5	91	5
	3-Hour Maximum[b]	NA	1,300	1,300	25	512	25
Carbon Monoxide	8-Hour Maximum[b]	10,000	10,000	10,000	NA	NA	500
	1-Hour Maximum[b]	40,000	40,000	40,000	NA	NA	2,000
Nitrogen Dioxide	Annual Arithmetic Mean	100	100	100	2.5[d]	25[d]	1
Ozone	1-Hour Maximum[e]	235	235	235	NA	NA	NA
Lead	Calendar Quarter Arithmetic Mean	1.5	1.5	15	NA	NA	NA

[a]Maximum concentration not to be exceeded more than once per year.
[b]Achieved when the expected number of exceedances per year is less than 1.
[c]Proposed October 5, 1989.
[d]The State of Florida has not yet adopted the PSD increments for NO_2 concentrations.
[e]Achieved when the expected number of days per year with concentrations above the standard is less than 1.

Note: Particulate matter (TSP) = total suspended particulate matter.
Particulate matter (PM10) = particulate matter with aerodynamic diameter less than or equal to 10 micrometers.

NA = Not applicable, i.e., no standard exists.

Sources: Federal Register, Vol. 43, No. 118, June 19, 1978.
40 CFR 50.
40 CFR 52.21.
Chapter 17-2.400, F.A.C.

A "major modification" is defined under PSD regulations as a change at an existing major facility which increases emissions by greater than significant amounts. PSD significant emission rates are shown in Table 3-2.

PSD review is used to determine whether significant air quality deterioration will result from the new or modified facility. Federal PSD requirements are contained in 40 CFR 52.21, Prevention of Significant Deterioration of Air Quality. The State of Florida has adopted PSD regulations which are essentially identical to federal regulations (Chapter 17-2.~~510~~ 500, F.A.C.). Major facilities and major modifications are required to undergo the following analysis related to PSD for each pollutant emitted in significant amounts:

1. Control technology review,
2. Source impact analysis,
3. Air quality analysis (monitoring),
4. Source information, and
5. Additional impact analyses.

In addition to these analyses, a new facility must also be reviewed with respect to Good Engineering Practice (GEP) stack height regulations. Discussions concerning each of these requirements are presented in the following sections.

3.2.2 Increments/Classifications

In promulgating the 1977 CAA Amendments, Congress specified that certain increases above an air quality baseline concentration level of sulfur dioxide and total suspended particulate matter [PM(TSP)] concentrations would constitute significant deterioration. The magnitude of the allowable increment depends on the classification of the area in which a new source (or modification) will be located or have an impact. Three classifications were designated based on criteria established in the CAA Amendments. Initially, Congress promulgated areas as Class I (international parks, national wilderness areas, and memorial parks larger than 5,000 acres,

Table 3-2. PSD Significant Emission Rates and De Minimis Monitoring Concentrations

Pollutant	Regulated Under	Significant Emission Rate (TPY)	De Minimis Monitoring Concentration ($\mu g/m^3$)
Sulfur Dioxide	NAAQS, NSPS	40	13, 24-hour
Particulate Matter (TSP)	NAAQS, NSPS	25	10, 24-hour
Particulate Matter (PM10)	NAAQS	15	10, 24-hour
Nitrogen Oxides	NAAQS, NSPS	40	14, annual
Carbon Monoxide	NAAQS, NSPS	100	575, 8-hour
Volatile Organic Compounds (Ozone)	NAAQS, NSPS	40	100 TPY[a]
Lead	NAAQS	0.6	0.1, 3-month
Sulfuric Acid Mist	NSPS	.7	NM
Total Fluorides	NSPS	3	0.25, 24-hour
Total Reduced Sulfur	NSPS	10	10, 1-hour
Reduced Sulfur Compounds	NSPS	10	10, 1-hour
Hydrogen Sulfide	NSPS	10	0.2, 1-hour
Asbestos	NESHAP	0.007	NM
Beryllium	NESHAP	0.0004	0.001, 24-hour
Mercury	NESHAP	0.1	0.25, 24-hour
Vinyl Chloride	NESHAP	1	15, 24-hour
Benzene	NESHAP	b	NM
Radionuclides	NESHAP	b	NM
Inorganic Arsenic	NESHAP	b	NM

[a]No de minimis concentration; an increase in VOC emissions of 100 TPY or more will require monitoring analysis for ozone.
[b]Any emission rate of these pollutants.

Note: Ambient monitoring requirements for any pollutant may be exempted if the impact of the increase in emissions is below de minimis monitoring concentrations.

NAAQS = National Ambient Air Quality Standards.
NM = No ambient measurement method.
NSPS = New Source Performance Standards.
NESHAP = National Emission Standards for Hazardous Air Pollutants.
$\mu g/m^3$ = micrograms per cubic meter.

Sources: 40 CFR 52.21.
Chapter 17-2, F.A.C.

and national parks larger than 6,000 acres) or as Class II (all areas not designated as Class I). No Class III areas, which would be allowed greater deterioration than Class II areas, were designated. EPA then promulgated as regulations the requirements for classifications and area designations.

On October 17, 1988, the EPA promulgated regulations to prevent significant deterioration due to emissions of nitrogen oxides (NO_x) and established PSD increments for nitrogen dioxide (NO_2) concentrations. The EPA class designations and allowable PSD increments are presented in Table 3-1. FDER has adopted the EPA class designations and allowable PSD increments for SO_2 and PM(TSP), but has not yet adopted the NO_2 increments.

The term "baseline concentration" evolves from federal and state PSD regulations and refers to a concentration level corresponding to a specified baseline date and certain additional baseline sources. By definition in the PSD regulations, as amended August 7, 1980, baseline concentration means the ambient concentration level which exists in the baseline area at the time of the applicable baseline date. A baseline concentration is determined for each pollutant for which a baseline date is established and includes:

1. The actual emissions representative of facilities in existence on the applicable baseline date; and
2. The allowable emissions of major stationary facilities which commenced construction before January 6, 1975, for SO_2 and PM(TSP) concentrations, or February 8, 1988, for NO_2 concentrations, but which were not in operation by the applicable baseline date.

The following emissions are not included in the baseline concentration and therefore affect PSD increment consumption:

1. Actual emissions from any major stationary facility on which construction commenced after January 6, 1975 for SO_2 and PM(TSP) concentrations, and after February 8, 1988, for NO_2 concentrations; and

2. Actual emission increases and decreases at any stationary facility occurring after the baseline date.

In reference to the baseline concentration, the term "baseline date" actually includes three different dates:

1. The major facility baseline date, which is January 6, 1975, in the cases of SO_2 and PM(TSP), and February 8, 1988, in the case of NO_2.
2. The minor facility baseline date, which is the earliest date after the trigger date on which a major stationary facility or major modification subject to PSD regulations submits a complete PSD application.
3. The trigger date, which is August 7, 1977, for SO_2 and PM(TSP), and February 8, 1988, for NO_2.

The minor source baseline date for SO_2 and PM(TSP) has been set as December 27, 1977, for the entire State of Florida (Chapter 17-2.450, F.A.C.).

3.2.3 Control Technology Review

The control technology review requirements of the federal and state PSD regulations require that all applicable federal and state emission limiting standards be met and that Best Available Control Technology (BACT) be applied to control emissions from the source [Chapter 17-2.500(5)(c), F.A.C]. The BACT requirements are applicable to all regulated pollutants for which the increase in emissions from the facility or modification exceeds the significant emission rate (see Table 3-2).

BACT is defined in Chapter 17-2.100(25), F.A.C. as:

> An emissions limitation, including a visible emission standard, based on the maximum degree of reduction of each pollutant emitted which the department, on a case by case basis, taking into account energy, environmental, and economic impacts, and other costs, determines is achievable through application of production processes and available methods, systems, and techniques (including fuel cleaning or treatment or innovative fuel combustion techniques) for control of

> such pollutant.. If the Department determines that technological or economic limitations on the application of measurement methodology to a particular part of a source or facility would make the imposition of an emission standard infeasible, a design, equipment, work practice, operational standard or combination thereof, may be prescribed instead to satisfy the requirement for the application of BACT. Such standard shall, to the degree possible, set forth the emissions reductions achievable by implementation of such design, equipment, work practice, or operation.

The requirements for BACT were promulgated within the framework of PSD in the 1977 amendments of the CAA [Public Law 95-95; Part C, Section 165(a)(4)]. The primary purpose of BACT is to optimize consumption of PSD air quality increments and thereby enlarge the potential for future economic growth without significantly degrading air quality (EPA, 1978; 1980). Guidelines for the evaluation of BACT can be found in EPA's Guidelines for Determining Best Available Control Technology (BACT), (EPA, 1978) and in the PSD Workshop Manual (EPA, 1980). These guidelines were promulgated by EPA to provide a consistent approach to BACT and to ensure that the impacts of alternative emission control systems are measured by the same set of parameters. In addition, through implementation of these guidelines, BACT in one area may not be identical to BACT in another area. According to EPA (1980), "BACT analyses for the same types of emissions unit and the same pollutants in different locations or situations may determine that different control strategies should be applied to the different sites, depending on site-specific factors. Therefore, BACT analyses must be conducted on a case-by-case basis."

The BACT requirements are intended to ensure that the control systems incorporated in the design of a proposed facility reflect the latest in control technologies used in a particular industry and take into consideration existing and future air quality in the vicinity of the proposed facility. BACT must, as a minimum, demonstrate compliance with NSPS for a source (if applicable). An evaluation of the air pollution control techniques and systems, including a cost-benefit analysis of alternative control technologies capable of achieving a higher degree of

emission reduction than the proposed control technology, is required. The cost-benefit analysis requires the documentation of the materials, energy, and economic penalties associated with the proposed and alternative control systems, as well as the environmental benefits derived from these systems. A decision on BACT is to be based on sound judgment, balancing environmental benefits with energy, economic, and other impacts (EPA, 1978).

3.2.4 Air Quality Monitoring Requirements

In accordance with requirements of 40 CFR 52.21(m) and Chapter 17-2.500(f), F.A.C, any application for a PSD permit must contain an analysis of continuous ambient air quality data in the area affected by the proposed major stationary facility or major modification. For a new major facility, the affected pollutants are those that the facility would potentially emit in significant amounts. For a major modification, the pollutants are those for which the net emissions increase exceeds the significant emission rate (see Table 3-2).

Ambient air monitoring for a period of up to 1 year is generally appropriate to satisfy the PSD monitoring requirements. A minimum of 4 months of data is required. Existing data from the vicinity of the proposed source may be utilized if the data meet certain quality assurance requirements; otherwise, additional data may need to be gathered. Guidance in designing a PSD monitoring network is provided in EPA's Ambient Monitoring Guidelines for Prevention of Significant Deterioration (EPA, 1987a).

The regulations include an exemption which excludes or limits the pollutants for which an air quality analysis must be conducted. This exemption states that the Department may exempt a proposed major stationary facility or major modification from the monitoring requirements with respect to a particular pollutant if the emissions increase of the pollutant from the facility or modification would cause, in any area, air

quality impacts less than the de minimis levels presented in Table 3-2 [Chapter 17-2.500(3)(e), F.A.C.].

3.2.5 Source Impact Analysis

A source impact analysis must be performed for a proposed major source subject to PSD for each pollutant for which the increase in emissions exceeds the significant emission rate (Table 3-2). The PSD regulations specifically provide for the use of atmospheric dispersion models in performing impact analysis, estimating baseline and future air quality levels, and determining compliance with AAQS and allowable PSD increments. Designated EPA models must normally be used in performing the impact analysis. Specific applications for other than EPA-approved models require EPA's consultation and prior approval. Guidance for the use and application of dispersion models is presented in the EPA publication Guideline on Air Quality Models (Revised) (EPA, 1987b). The source impact analysis for criteria pollutants may be limited to only the new or modified source if the net increase in impacts due to the new or modified source is below significance levels, as presented in Table 3-1.

Various lengths of record for meteorological data can be utilized for impact analysis. A 5-year period can be used with corresponding evaluation of highest, second-highest short-term concentrations for comparison to AAQS or PSD increments. The term "highest, second-highest" (HSH) refers to the highest of the second-highest concentrations at all receptors (i.e., the highest concentration at each receptor is discarded). The second-highest concentration is significant because short-term AAQS specify that the standard should not be exceeded at any location more than once a year. If less than 5 years of meteorological data are used in the modeling analysis, the highest concentration at each receptor must normally be used for comparison to air quality standards.

3.2.6 Additional Impact Analysis

In addition to air quality impact analyses, federal and State of Florida PSD regulations require analyses of the impairment to visibility and the

impacts on soils and vegetation that would occur as a result of the proposed source [40 CFR 52.21; Chapter 17-2.500(5)(e), F.A.C.]. These analyses are to be conducted primarily for PSD Class I areas. Impacts due to general commercial, residential, industrial, and other growth associated with the source must also be addressed. These analyses are required for each pollutant emitted in significant amounts (Table 3-2).

3.2.7 Good Engineering Practice Stack Height

The 1977 CAA Amendments require that the degree of emission limitation required for control of any pollutant not be affected by a stack height that exceeds GEP, or any other dispersion technique. On July 8, 1985, EPA promulgated final stack height regulations (EPA, 1985a). Identical regulations have been adopted by FDER [Chapter 17-2.270, F.A.C.]. GEP stack height is defined as the highest of:

1. 65 meters (m), or
2. A height established by applying the formula:

   $$Hg = H + 1.5L$$

   where: Hg = GEP stack height,
   H = Height of the structure or nearby structure, and
   L = Lesser dimension (height or projected width) of nearby structure(s), or
3. A height demonstrated by a fluid model or field study.

"Nearby" is defined as a distance up to five times the lesser of the height or width dimensions of a structure or terrain feature, but not greater than 0.8 km. Although GEP stack height regulations require that the stack height used in modeling for determining compliance with AAQS and PSD increments not exceed the GEP stack height, the actual stack height may be greater.

The stack height regulations also allow increased GEP stack height beyond that resulting from the above formula in cases where plume impaction occurs. Plume impaction is defined as concentrations measured or predicted to occur when the plume interacts with elevated terrain. Elevated terrain

is defined as terrain which exceeds the height calculated by the GEP stack height formula. Because the terrain in the vicinity of the Lauderdale Plant is flat, plume impaction was not considered in determining the GEP stack height.

3.3 NONATTAINMENT RULES

Based on the current nonattainment provisions (Chapter 17-2.510, F.A.C.), all major new facilities and modifications to existing major facilities located in a nonattainment area must undergo nonattainment review if the proposed pieces of equipment have the potential to emit 100 TPY or more of the nonattainment pollutant, or if the major modification results in a significant net emission increase of the nonattainment pollutant.

For major facilities or major modifications which locate in an attainment or unclassifiable area, the nonattainment review procedures apply if the source or modification is located within the area of influence of a nonattainment area. The area of influence is defined as an area which is outside the boundary of a nonattainment area but within the locus of all points that are 50 km outside the boundary of the nonattainment area. Based on Chapter 17-2.510(2)(a)2.a, F.A.C., all VOC sources which are located within an area of influence are exempt from the provisions of new source review for nonattainment areas. Sources which emit other nonattainment pollutants and are located within the area of influence are subject to nonattainment review unless the maximum allowable emissions from the proposed source do not have a significant impact within the nonattainment area.

3.4 SOURCE APPLICABILITY

3.4.1 PSD Review

3.4.1.1 Pollutant Applicability

The Lauderdale Plant is located in Broward County, which has been designated by EPA and FDER as an attainment area for all criteria pollutants except ozone. Because of the ozone nonattainment designation, emissions of volatile organic compounds from the Lauderdale Plant will not

be subject to PSD review. Broward County and surrounding counties are designated as PSD Class II areas for SO_2, PM(TSP), and NO_x. The Lauderdale site is located approximately 60 km northeast of the Everglades National Park, the nearest PSD Class I area.

The existing Lauderdale Plant is considered to be an existing major facility because emissions of regulated pollutants exceed 100 TPY (refer to Table 2-9); therefore, PSD review is required for any pollutant for which the net increase in emissions exceeds the PSD significant emission rates presented in Table 3-2 (i.e., major modification).

Table 3-3 presents the maximum emissions from the proposed repowered Units 4 and 5, the reduction in emissions associated with the shutdown of the existing Units 4 and 5 steam generators, and the resulting net change in emissions. As shown, potential emissions from the repowering project will exceed the PSD significant emission rates for the following regulated pollutants: SO_2, PM(TSP), PM10, NO_x, carbon monoxide (CO), sulfuric acid mist, beryllium (Be), mercury (Hg) and inorganic arsenic (As). The project is subject to PSD review for these pollutants.

3.4.1.2 Ambient Monitoring

Based upon the net increase in emissions from the Lauderdale Repowering Project, presented in Table 3-3, a PSD preconstruction ambient monitoring analysis is required for SO_2, PM(TSP), PM10, NO_x, CO, sulfuric acid mist, Be, Hg, and As. However, if the net increase in impact of a pollutant is less than the de minimis monitoring concentration, then an exemption from the preconstruction ambient monitoring requirement may be granted for that pollutant. In addition, if an acceptable ambient monitoring method for the pollutant has not been established by EPA, monitoring is not required.

Maximum predicted impacts due to the net increase associated with repowering Lauderdale Units 4 and 5 are presented in Table 3-4 for pollutants requiring PSD review. The methodology used to predict maximum impacts and the impact analysis results are presented in Sections 6.0 and

Table 3-3. Net Increase in Emissions Due to the Lauderdale Repowering Project Compared to the PSD Significant Emission Rates

Pollutant	Emissions (TPY) Potential Emissions From Proposed Units 4 & 5[a]	Reductions From Existing Units 4 & 5	Net Increase in Emissions	Significant Emission Rate	PSD Review
Sulfur Dioxide	12,232	2,318	9,914	40	Yes
Particulate Matter (TSP)	825	202	623	25	Yes
Particulate Matter (PM10)	825	145	680	15	Yes
Nitrogen Dioxide	5,998.8	2,510	3,489	40	Yes
Carbon Monoxide	1,659	185	1,474	100	Yes
Volatile Organic Compounds	115.3	15.4	99.9	NA	No[b]
Lead	0.21	0.064	0.15	0.6	No
Sulfuric Acid Mist	1,525	88.8	1,436	7	Yes
Total Fluorides	0.76	0.796	<0.1	3	No
Total Reduced Sulfur[c]	NEG	NEG	NEG	10	No
Reduced Sulfur Compounds[c]	NEG	NEG	NEG	10	No
Hydrogen Sulfide[c]	NEG	NEG	NEG	10	No
Asbestos[c]	NEG	NEG	NEG	0.007	No
Beryllium	0.058	0.0096	0.05	0.0004	Yes
Mercury	0.35	0.037	0.31	0.1	Yes
Vinyl Chloride[c]	NEG	NEG	NEG	1	No
Benzene[c]	NEG	NEG	NEG	0	No
Radionuclides[c]	NEG	NEG	NEG	0	No
Inorganic Arsenic	0.10	0.0444	0.06	0	Yes

[a]See Table 2-6.
[b]Nonattainment pollutant; PSD review does not apply.
[c]Emissions of these pollutants considered not to have any emission rate increase.

Note: NEG = Negligible.

Table 3-4. Predicted Net Increase In Impacts Due To The Repowering Project Compared To PSD De Minimis Monitoring Concentrations

Pollutant	Concentration ($\mu g/m^3$) Predicted Net Increase In Impacts[a]	Concentration ($\mu g/m^3$) De Minimus Monitoring Concentration
Sulfur Dioxide	36	13, 24-hour
Particulate Matter (TSP)	3.0	10, 24-hour
Particulate Matter (PM10)	3.0	10, 24-hour
Nitrogen Dioxide	0.86	14, annual
Carbon Monoxide	13	575, 8-hour
Sulfuric Acid Mist	NM	NM
Beryllium	0.0002	0.001, 24-hour
Mercury	0.0003	0.25, 24-hour
Inorganic Arsenic	NM	NM

[a]Based on maximum emissions at 100-percent load and 100-percent capacity factor.

Note : NA = Not applicable.
NM = No acceptable ambient measurement method has been developed and, therefore, de minimis levels have not been established by EPA.

7.0. As shown in Table 3-4, the maximum net increase in impact is below the respective de minimis monitoring concentration for all pollutants except SO_2. There is no acceptable ambient monitoring method for sulfuric acid mist and As, and therefore monitoring is not required for these pollutants. As a result, the proposed repowering project is subject to preconstruction ambient monitoring analysis for SO_2 only.

In response to the SO_2 monitoring requirement, FPL developed an ambient air monitoring plan of study in July 1988 (KBN, 1988). The plan described the monitoring network and monitoring methods and was subsequently approved by FDER (May 25, 1989). Monitoring was initiated in October 1988. The air quality analysis for SO_2 is presented in Section 5.0.

3.4.1.3 GEP Stack Height Impact Analysis

The GEP stack height regulations allow any stack to be at least 65 meters high. The proposed stacks for the repowered Units 4 and 5 will be 150 feet in height (45.7 meters) and, therefore, do not exceed the GEP stack height. The potential for downwash of the units' emissions due to nearby structures is discussed in Section 6.0, Air Quality Modeling Approach.

3.4.2 Nonattainment Review

A condition in the site certification and accompanying FDER permit is requested that would limit VOC emissions from the Lauderdale Plant as of the permanent shutdown of Units 4 and 5:

Storage Tanks No. 2 and No. 5	- 9.0 TPY
GTs 1 through 24	- 90.9 TPY
Units 4 and 5	- 0 TPY

With these permit conditions, the potential emissions from the plant would be reduced by about 160 TPY, a 65 percent reduction. In addition, the facility would be a minor source of VOCs. Note that the actual emissions from the plant are substantially less than 100 TPY (see also Table 2-11 and Section 2.4).

For minor sources, nonattainment review is required for ozone if the net increase in VOC emissions due to the proposed modification exceeds the

significant emission rate of 100 TPY. As shown in Table 3-3, the maximum potential increase in VOC emissions due to the Repowering Project and contemporaneous emission decreases will be 99.9 TPY. Nonattainment requirements are, therefore, not applicable.

4.0 CONTROL TECHNOLOGY REVIEW

4.1 APPLICABILITY

The Control Technology review requirements of the PSD regulations are applicable to emissions of SO_2, PM(TSP), PM10, NO_x, CO, H_2SO_4 mist, beryllium, mercury, and inorganic arsenic (see Section 3.0). This section presents the applicable New Source Performance Standards (NSPS) and the proposed BACT for these pollutants. The approach to BACT analyses is based on the regulatory definitions of BACT as well as EPA's current policy guidance requiring the top down approach.

4.2 NEW SOURCE PERFORMANCE STANDARDS

The applicable NSPS for gas turbines are codified in 40 CFR 60, Subpart GG. These regulations apply to:

1. "Electric utility stationary gas turbine" with a heat input at peak load of greater than 100 million Btu/hr [40 CFR 60.332 (b)];
2. "Stationary gas turbines" with a heat input at peak load between 10 and 100 million Btu/hr [40 CFR 60.332 (c)]; or
3. "Stationary gas turbines" with a manufacturer's rate based load at ISO conditions of 30 MW or less [40 CFR 60.332 (d)].

The electric utility stationary gas turbine provisions apply to stationary gas turbines constructed for the purpose of supplying more than one-third of its potential electric output capacity to any utility power distribution system for sale [40 CFR 60.331 (q)]. The requirements for electric utility stationary gas turbines are applicable to the project and are the most stringent provision of the NSPS. These requirements are summarized in Table 4-1 and were considered in the BACT analysis.

As noted from Table 4-1, the NSPS NO_x emission limit can be adjusted upward to allow for fuel bound nitrogen. For a fuel bound nitrogen concentration of 0.015 percent or less, no increase in the NSPS is

Table 4-1. Federal NSPS For Electric Utility Stationary Gas Turbines

Pollutant	Emission Limitation[a]
Sulfur Dioxide	Maximum of 0.015 percent by volume at 15 percent oxygen on a dry basis or sulfur in fuel no greater than 0.8 percent by weight
Nitrogen Oxides[b]	0.0075 percent by volume (75 ppm) at 15 percent O_2 on a dry basis adjusted for heat rate and fuel nitrogen

[a] Applicable to electric utility gas turbines with a heat input at peak load of greater than 100 x 10^6 Btu/hr.

[b] Standard is multiplied by 14.4/Y; where Y is the manufacturer's rated heat rate in kilojoules per watt at rated load or actual measured heat rate based on the lower heating value of fuel measured at actual peak load; Y cannot be greater than 14.4. Standard is adjusted upward (additive) by the percent of nitrogen in the fuel:

Fuel-bound nitrogen (percent by weight)	Allowed Increase NO_x percent by volume
$N \leq 0.015$	0
$0.015 < N \leq 0.1$	0.04(N)
$0.1 < N \leq 0.25$	0.004+0.0067(N-0.1)
$N > 0.25$	0.005

where:

N = the nitrogen content of the fuel (percent by weight).

Source: 40 CFR 60 Subpart GG.

provided; for a fuel bound nitrogen concentration of 0.06 percent the NSPS is increased by 0.0024 percent or 24 ppm.

NSPS also apply to the burning of fuel in the duct burner of a combined cycle power plant (i.e., a power plant which recovers the waste heat from a gas turbine in a heat recovery steam generator). The NSPS, contained in 40 CFR 60, Subpart Db (Industrial-Commercial Institutional Fossil Fuel Steam Generating Units), apply to duct burners with a heat input greater than 100 x 10^6 Btu/hr. These NSPS do not apply to the repowering project since the maximum design heat input capacity for the duct burners will be 90.62 x 10^6 Btu/hr.

4.3 BEST AVAILABLE CONTROL TECHNOLOGY

4.3.1 Nitrogen Oxides

4.3.1.1 Emission Control Hierarchy

NO_x emissions from combustion of fossil fuels consist of thermal NO_x and fuel bound NO_x. Thermal NO_x is formed from the reaction of oxygen and nitrogen in the combustion air at combustion temperatures. Formation of thermal NO_x depends on the flame temperature, residence time, combustion pressure, and air to fuel ratios in the primary combustion zone. The design and operation of the combustion chamber dictates these conditions. Fuel bound NO_x is created by the oxidation of volatilized nitrogen in the fuel. Nitrogen content in the fuel is the primary factor in its formation.

Table 4-2 presents a listing of the LAER/BACT decisions for gas turbines made by state environmental agencies and EPA regional offices. This table was developed from the information contained in the LAER/BACT clearinghouse documents (EPA, 1985b, 1986, 1987c, 1988c) and by contacting state agencies such as the California Air Control Board, the South Coast Air Quality Management District, New Jersey Department of Environmental Protection, and Rhode Island Department of Environmental Management.

The most stringent NO_x controls for combustion turbines established as LAER/BACT by state agencies are selective catalytic reduction (SCR) and wet injection. Presently, there are about 35 operating and permitted facilities with SCR in the United States. However, none of these installations employ advanced combustion turbines, as will the Lauderdale Repowering Project. Almost all of these facilities were required to have SCR due to nonattainment status of the area where the facility was located. The requirement for SCR in these cases was to meet the Lowest Achievable Emission Rate (LAER). LAER is defined as follows:

> Lowest achievable emission rate means, for any source, the more stringent rate of emissions based on the following: (i) The most stringent emissions limitation which is contained in the implementation plan of any State of such class or category of stationary source, unless the owner or operator of the proposed stationary source demonstrates that such limitations are not achievable; or (ii) The most stringent emissions limitation which is achieved in practice by such class or category of stationary source. This limitation, when applied to a modification, means the lowest achievable emissions rate for the new or modified emissions units within the stationary source. In no event shall the application of this term permit a proposed new modified stationary source to emit any pollutant in excess of the amount allowable under applicable new source standards of performance (40 CFR 51 Appendix S. II, A.18).

As noted from the discussion contained in Subsection 3.2.3, there are distinct regulatory and policy differences between LAER and BACT.

In Florida, the most recent PSD permits and BACT determination for gas turbines have required wet injection for NO_x control. The emission

limits included in these permits were 42 ppm and 65 ppm (corrected to 15 percent O_2, dry conditions), respectively, for natural gas and fuel oil firing.

The hierarchy for NO_x control suggested by the existing and permitted facilities is as follows:

1. SCR with wet injection.
2. Wet Injection.

The selected control level of SCR used for the BACT analysis for the Lauderdale Repowering Project was 9 ppm NO_x corrected to 15 percent dry conditions for natural gas burning. This level of control assumes 79 percent removal of NO_x by the SCR equipment with an uncontrolled NO_x concentration of 42 ppm. For fuel oil firing, a control level of 13 ppm was used to account for fuel bound nitrogen. These levels of control are the most stringent currently being established as LAER. For wet injection, the combustor design available for the advanced combustion turbines can limit NO_x to 42 ppm when firing natural gas and 65 ppm when firing fuel oil.

4.3.1.2 Technology Description and Feasibility

SELECTIVE CATALYTIC REDUCTION (SCR)

SCR uses ammonia (NH_3) to react with NO_x in the gas stream under the presence of a catalyst. NH_3, which is diluted with air to about 5 percent by volume, is introduced into the gas stream at reaction temperatures between 570°F and 750°F. The reactions are as follows:

$$4NH_3 + 4NO + O_2 = 4N_2 + 6H_2O$$
$$4NH_3 + 2NO_2 + O_2 = 3N_2 + 6H_2O$$

SCR has mainly been installed at facilities located in nonattainment areas for NO_2, i.e., in California. While the operating experience has

not been extensive, certain cost, technical and environmental considerations have surfaced. These considerations are summarized in Table 4-3.

SCR operating experience, as applied to gas turbines, consists primarily of baseload natural gas fired installations either of cogeneration or combined cycle configuration; no simple cycle facilities have SCR. Exhaust gas temperatures of simple cycle CTs are generally in the range of 1000°F, which exceeds the optimum range for SCR. All current SCR applications have the catalyst placed in the HRSG to achieve proper reaction conditions. This allows a relatively constant temperature for the reaction of NH_3 and NO_x on the catalyst surface. Cycling the CTs, as is expected for the repowered units, will cause variable exhaust conditions. Such conditions will potentially result in catalyst damage due to temperature induced stresses.

The use of SCR has been limited to facilities which burn natural gas or small amounts of fuel oil since SCR catalysts are contaminated by sulfur-containing fuels (i.e., fuel oil). For most fuel oil burning facilities, catalyst operation is discontinued, or the exhaust bypasses the SCR system. Experience at the United Airlines cogeneration facility using Jet A fuel oil found catalyst contamination after 2,500 hours of operation. For this facility, the catalyst has been replaced three times and the recommended duration of operation by the manufacturer is now 500 hours.

As presented in Table 4-3, ammonium bisulfate is formed by the reaction of NH_3 and SO_3. Ammonium bisulfate can be corrosive and could cause damage to the HRSG surfaces that follow the catalyst, as well as the stack. Corrosion protection for these areas would be required.

Reported and permitted NO_x removal efficiencies of SCR range from 40 to 80 percent. The most stringent emission limiting standards associated with SCR are approximately 9 ppm for natural gas firing. However, two

Table 4-3. Cost, Technical and Environmental Considerations of SCR Utilized on Combustion Turbines (Page 1 of 2)

Consideration	Description
COST:	
Catalyst Replacement	Catalyst life varies depending on the application. Cost ranges from 20% to 40% of total capital cost and is the dominant annual cost factor.
Ammonia	Ratio of at least 1:1 NH_3 to NO_x generally needed to obtain high removal efficiencies. Special storage and handling equipment required.
Space Requirements	For new installations, space in the catalyst is needed for replacement layers. Additional space is also required for catalyst maintenance and replacement.
Backup Equipment	Reliability requirements necessitate redundant systems such as ammonia control and vaporization equipment.
Catalyst Back Pressure Heat Rate Reduction	Addition of catalyst creates back pressure on the turbine which reduces overall heat rate.
TECHNICAL:	
Ammonia Flow Distribution	NH_3 must be uniformly distributed in the exhaust stream to assure optimum mixing with NO_x prior to reaching the catalyst.
Temperature	The narrow temperature range that SCR systems operate within, i.e., about 100°F, must be maintained even during load changes. Operational problems could occur if this range is not maintained. HRSG duct firing requires careful monitoring.
Ammonia Control System	Quantity of NH_3 introduced must be carefully controlled. With too little NH_3, the desired control efficiency is not reached; with too much NH_3, NH_3 emissions (referred to as slip) occur.

Table 4-3. Cost, Technical and Environmental Considerations of SCR Utilized on Combustion Turbines (Page 2 of 2)

Consideration	Description
Flow Control	The velocity through the catalyst must be within a range to assure satisfactory residence time.
ENVIRONMENTAL:	
Ammonia Slip	NH_3 slip, or NH_3 that passes unreacted through the catalyst and into the atmosphere, can occur if: 1) too much ammonia is added, 2) the flow distribution is not uniform, 3) the velocity is not within the optimum range, or the proper temperature is not maintained.
Ammonia Bisulfate	Ammonium bisulfate salts can lead to increased corrosion. These salts usually occur when firing fuel oil. These compounds are emitted as particulates.
N_2O and Nitro-soamines formation	The mechanism under which these compounds form is not totally understood. Secondary impacts can occur.

facilities have reported emission limits of about 4.5 ppm. These emission limits were clearly determined to be LAER on CTs using water injection with uncontrolled NO_x levels below 42 ppm. For fuel oil firing, permitted NO_x emission limits with SCR have ranged from 14 ppm to 42 ppm.

The available information suggests that SCR is a technically feasible alternative for natural gas firing. However, the following significant technical limitations exist:

1. SCR catalysts are potentially damaged by temperature variability of the CT exhaust gases due to cycling operation, and
2. Continuous operation on SCR or CTs using distillate oil has not been demonstrated; technical, economic, and environmental uncertainties would result.

WET INJECTION

The injection of water or steam in the combustion zone of CTs reduces the flame temperature with a corresponding decrease of NO_x emissions. The amount of NO_x reduction possible depends on the combustor design and the water-to-fuel ratio employed. An increase in the water to fuel ratio will cause a concomitant decrease in NO_x emissions until flame instability occurs. At this point, operation of the CT becomes inefficient and unreliable, and significant increases in products of incomplete combustion will occur, i.e., CO and VOC emissions.

The advanced CTs are new designs which are substantially higher in power output (i.e., about 50 percent greater) and combustion temperatures (i.e., 2,300°F vs 2,000°F) than previous designs. As a result, the maximum degree of wet injection NO_x control on advanced CTs is lower than that of smaller CT designs.

For the advanced combustion turbines being considered for the Lauderdale Repowering Project, the combustion chamber design includes steam

injection. The lowest NO_x emission levels guaranteed by CT manufacturers are 42 ppmvd and 65 ppmvd (both corrected to 15 percent O_2) for natural gas and fuel oil firing, respectively. The first U.S. facility to propose advanced combustion turbines is the Virginia Electric and Power Company combined cycle plant located at Chesterfield, Virginia. This facility was permitted at 42 ppmvd at 15 percent O_2 for natural gas firing and 77 ppmvd at 15 percent O_2 for fuel oil firing; the fuel-bound nitrogen content was based on 0.05 percent nitrogen in the fuel.

Wet injection is a technically feasible alternative for the Lauderdale Repowering Project. The application of this technology has the following limitations:

1. Wet injection can be accomplished until a condition of maximum moisturization occurs; this design condition occurs at 42 ppm on natural gas and 65 ppm on fuel oil for the advanced CTs,

2. Wet injection will not substantially reduce NO_x formation due to fuel-bound nitrogen. Any emission limiting requirements must account for this effect.

3. Wet injection will increase the emissions of CO and VOC. Emissions are dependent on the water-to-fuel ratio.

For the BACT analysis, wet injection was assumed to be capable of achieving NO_x emission levels of 42 ppm when firing natural gas, and 65 ppm when firing fuel oil (corrected to 15 percent O_2 dry conditions). These emission levels are the most stringent being established as BACT.

4.3.1.3 Impact Analysis

A BACT determination requires an analysis of the economic, environmental, and energy impacts of the proposed and alternative control technologies [see 40 CFR 52.21(b)(12), Chapter 17-2.100(25),

F.A.C., and Chapter 17-2.500(5)(c), F.A.C.]. The analysis must, by definition, be specific to the project, i.e., case-by-case. The BACT analyses was performed for the following alternatives:

1. SCR and wet injection at an emission rate of approximately 9 ppmvd corrected to 15 percent O_2; maximum NO_x emissions are 991 TPY.

2. Wet injection at an emission rate of 42 ppmvd corrected to 15 percent O_2; maximum NO_x emissions are 4,624 TPY (emissions from Table A-6 75°F times 4 CTs).

ECONOMIC

The total annualized cost for the alternative NO_x control technologies is $16,805,851 (Table 4-4). The cost effectiveness for SCR was estimated to be greater than $4,600/ton of NO_x removed for natural gas firing. Cost estimates for SCR for oil firing were not performed since the application of SCR when firing oil is considered infeasible for the project (See Section 4.3.1.4).

ENVIRONMENTAL

The maximum predicted impacts of the alternative technologies are all considerably below the PSD increment for NO_x of 25 $\mu g/m^3$, annual average and the AAQS for NO_x of 100 $\mu g/m^3$. Additional controls beyond steam injection alone (i.e., SCR and SCR with water injection) reduce predicted impacts by less than about 3 percent of the PSD increment and less than about 1 percent of the AAQS for the repowering project.

Use of SCR on the proposed project will cause emissions of ammonia, ammonium sulfates, such as ammonium bisulfate. Ammonia emissions associated with SCR are approximately 10 ppm and higher based on previous experience; previous permit conditions have specified this level. Minimum ammonia emissions would be about 365 TPY. However, ammonia emissions could be five times this level (i.e., about 1,830) since actual operating experience has found ammonia slippage rates as high as 50 ppm.

Table 4-4. Capital and Annual Costs for Alternative NO_x Control Technology

Item	SCR	
	Cost	Basis
CAPITAL COSTS COMPONENTS:		
Catalyst and Associated Equipment	$12,400,000	Note 1
NH3 Storage Tank	$200,000	Note 1
System Installation	$1,725,200	Note 1
HRSG Modification	$1,600,000	Note 1
Engineering, Erection Supervision and Start-up	$1,800,000	Note 1
Tax (material only)	$846,000	
Escalation	$2,878,600	5%
Interest During Construction	$1,836,200	
Contingency	$4,656,900	
Total Capital Cost	$27,942,900	
Annualized Capital Cost	$3,467,713	Note 2
OPERATING AND MAINTENANCE:		
Catalyst Replacement	$2,400,000	Note 3
Operating Personnel	$40,000	
Catalyst Change-out	$200,000	
Ammonia	$350,400	Note 4
Electrical Cost	$245,280	Note 5
Escalation	$808,920	
Contingency	$485,352	
Total Annual Cost	$4,529,952	
Levelized Annual Cost	$7,218,479	Note 6
ENERGY PENALTIES:		
Start-up Costs	$1,800,000	Note 7
Pressure Drop	$1,085,106	Note 8
Heat Rate	$955,282	Note 9
Total	$3,840,389	
Levelized Annual Cost	$6,119,659	
TOTAL ANNUALIZED COSTS:	$16,805,851	

Notes:
1. Based on engineering estimate.
2. Capital recovery factor based on 12 percent over 30 years.
3. Two years replacement.
4. $200/ton.
5. 500 kW/hr required.
6. Levelizing factor based 12 percent interest, 30 years and 5 percent escalation rate.
7. Loss of 50 kW for 15 starts/CT.
8. 4" pressure drop across SCR.
9. 0.58 percent heat rate penalty.

The replacement of the SCR catalyst will create additional economic and environmental impacts since available catalysts, e.g. vanadium pentoxide, are listed as hazardous chemical wastes under RCRA regulations (40 CFR 261).

Ammonia delivery and storage must be handled with caution because of its hazardous nature. Special precautions would be required to assure no environmental discharge occurs.

ENERGY

Energy penalties will occur with all control alternatives evaluated. However, significant energy penalties occur with SCR. With SCR the output of the CT is reduced by about 0.58 percent over that of wet injection. This penalty is due to the SCR pressure drop, which would be about 4 inches of water, and would amount to about 32,009,004 kWh in potential lost generation per year. The energy required by the SCR equipment would be about 4,380,000 kWh/year. Taken together, the lost generation and energy requirements of SCR could supply the electrical needs of 3,200 residential customers. The pressure drop would also reduce the units heat rate by about 62 Btu/kWh. This would result in increased natural gas usage amounting to 325.9 million cubic ft.

4.3.1.4 Proposed BACT and Rationale

The proposed BACT for the Lauderdale Repowering Project is wet injection. The proposed NO_x emissions levels using wet injection are 42 ppm when firing natural gas and 65 ppm when firing fuel oil. This control technology is proposed for the following reasons:

1. SCR was rejected based on technical, economic and environmental grounds. SCR has not been demonstrated on oil-fired CT/HRSG especially the size being proposed for the project, i.e. > 150 MW/CT. Operation of SCR on fuel-oil-firing CTs will cause operating problems and also result in catalyst poisoning; therefore, SCR on oil firing is not considered feasible. Operation of SCR on CT units experiencing cycling load

conditions has not been demonstrated; temperature variability of the exhaust gases potentially would damage the catalyst. The estimated incremental cost of SCR for natural gas firing exceeds $4,600 per ton of NO_x removed. These costs are about 6 times more costly per ton of NO_x removed than the proposed BACT of wet injection (estimated to be about $1,200 per ton of polutant removed.). Additional environmental impacts would result from SCR operation including emissions of ammonia and ammonium bisulfates, and the generation of hazardous waste, i.e., spent catalyst replacement.

2. The proposed BACT of wet injection provides the least costly control alternative and results in low environmental impacts (less than 3 percent of the allowable PSD increments and 1 percent of the AAQS for NO_x). Wet injection at the proposed emissions levels has been adopted previously in BACT determinations. In addition, CT manufacturers have been willing to guarantee this level of NO_x emissions.

3. The proposed CTs are the largest model in production and have not been installed as fully operational anywhere in the world. As a result, there is no demonstrated experience with installing and operating SCR with CTs this large.

4.3.2 Carbon Monoxide (CO)

4.3.2.1 Emission Control Hierarchy

CO emissions are a result of incomplete or partial combustion of fossil fuel. Combustion design and catalytic oxidation are the control alternatives that are viable for the project.

Combustion design is the more common control technique used in CTs. Sufficient time, temperature and turbulence is required within the combustion zone to maximize combustion efficiency and minimize the

emissions of CO. Combustion efficiency is dependent upon combustor design. When wet NO_x control systems are employed, the amount of water or steam injected in the combustion zone also affects combustion efficiency. For the CTs being evaluated and with wet injection NO_x control, CO emissions range from 25 ppm to 33 ppm, corrected to dry conditions.

Catalytic oxidation is a post-combustion control that has been employed in CO nonattainment areas where regulations have required CO emission levels to be less than those associated with wet injection. These installations have been required to utilize LAER technology, and typically have CO limits in the 10 ppm range (corrected to dry conditions).

4.3.2.2 Technology Description

In an oxidation catalyst control system, CO emissions are reduced by allowing unburned CO to react with oxygen at the surface of a precious metal catalyst such as platinum. Combustion of CO starts at about 300°F, with efficiencies above 90 percent occurring at temperatures above 600°F. Catalytic oxidation occurs at temperatures 50 percent lower than that of thermal oxidation, which reduces the amount of thermal energy required. For CT/HRSG combinations, the oxidation catalyst can be located directly after the CT or in the HRSG. Catalyst size depends upon the exhaust flow, temperature and desired efficiency. The existing gas turbine applications have been limited to smaller cogeneration facilities burning natural gas.

Oxidation catalysts have not been used on fuel-oil-fired CTs or combined cycle facilities. The use of sulfur-containing fuels in an oxidation catalyst system would result in an increase of SO_3 emissions and concomitant corrosive effects to the back end of the HRSG and stack. In addition, trace metals in the fuel would result in catalyst poisoning during prolonged periods of operation.

Since the repowered units will likely require numerous startups, variations in exhaust conditions will influence catalyst life and performance. Very little technical data exist to demonstrate the effect of such cycling.

The lack of demonstrated operation with oil firing suggests rejection of catalytic oxidation as a technically feasible alternative. However, continuous operation using natural gas is technically feasible and therefore was evaluated as an alternative BACT technology.

Combustion design is dependent upon the manufacturer's operating specifications, which include air to fuel ratio and the amount of water injected. The advanced CTs presently being considered have designs to optimize combustion efficiency and minimize CO emissions. Installations with oxidation catalyst and combustion controls generally have controlled CO levels of 10 ppm as LAER.

For the Lauderdale Repowering Project the following alternatives were evaluated for natural gas firing or BACT:

1. Oxidation catalyst at 10 ppmvd; maximum CO emissions are 521 TPY.

2. Combustion controls at 30 ppmvd; maximum emissions are 1,562 TPY (see Table A-6, 75°F times 4 CTs).

4.3.2.3 Impact Analysis

ECONOMIC

The estimated annualized cost of a CO oxidation catalyst is $9,947,387 (Table 4-5) with a cost effectiveness of greater than $9,556/ton of CO removed. The cost effectiveness is based on advanced CT emissions of 30 ppmvd. Catalytic oxidation has not been applied to fuel oil firing CTs and is considered infeasible. No costs are associated with combustion techniques since they are inherent in the design.

Table 4-5. Capital and Annual Costs for Alternative CO Control Technology

Item	Oxidation Cost	Oxidation Basis
CAPITAL COSTS COMPONENTS:		
Catalyst and Associated Equipment	$6,520,000	Note 1
System Installation	$1,408,600	Note 1
HRSG Modification	$1,000,000	Note 1
Engineering, Erection Supervision and Start-up	$1,200,000	Note 1
Tax (material only)	$451,200	
Escalation	$1,639,800	5%
Interest During Construction	$1,046,000	
Contingency	$2,885,500	
Total Capital Cost	$16,151,100	
Annualized Capital Cost	$2,004,435	Note 2
OPERATING AND MAINTENANCE:		
Catalyst Replacement	$2,750,000	Note 3
Operating Personnel	$0	
Catalyst Change-out	$80,000	
Escalation	$709,800	
Contingency	$424,600	
Total Annual Cost	$3,964,400	
Levelized Annual Cost	$6,317,271	Note 5
ENERGY PENALTIES:		
Start-up Costs	$0	
Pressure Drop	$542,553	Note 5
Heat Rate	$477,641	Note 6
Total	$1,020,194	
Levelized Annual Cost	$1,625,680	Note 4
TOTAL ANNUALIZED COSTS:	$9,947,387	

Notes:
1. Based on engineering estimate.
2. Capital recovery factor based on 12 percent over 30 years.
3. Two years replacement.
4. $200/ton.
5. Levelizing factor based on 12 percent interest, 30 years and 5 percent escalation rate.
6. 2" pressure drop across catalyst.
7. 0.29 percent heat rate penalty.

ENVIRONMENTAL

The air quality impacts of both oxidation catalyst control and combustion design control techniques are below the significant impact levels for CO. Therefore, no significant environmental benefit would be realized by the installation of a CO catalyst.

ENERGY

An energy penalty would result from the pressure drop across the catalyst bed. A pressure drop of about 2 inches water gauge would be expected. At a catalyst back pressure of about 2 inches, an energy penalty of about 16,004,500 kWh/yr would result. This energy penalty is sufficient to supply the electrical needs of about 1,400 residential customers over a year. Natural gas usage would increase by about 163 million cubic ft.

4.3.2.4 Proposed BACT and Rationale

Combustion design is proposed as BACT due to the technical and economic consequences of utilizing catalytic oxidation on advanced CTs. Catalytic oxidation is not considered feasible for the following reasons:

1. Catalytic oxidation has not been demonstrated on cycling CTs or those using fuel oil; and
2. The economic impacts are significant, i.e., annualized cost of almost $10,000,000 with a cost effectiveness of over $9,556/ton of CO removed.

4.3.3 Sulfur Dioxide (SO_2)

4.3.2.1 Emission Control Hierarchy

Sulfur dioxide (SO_2) emissions are a result of the oxidation of sulfur in fossil fuel and can be minimized by reducing the sulfur content in fuel or through applying post combustion removal techniques. For CTs, the use of low sulfur fuels is the only demonstrated control technology determined to be technically feasible. Post combustion techniques, such as flue gas desulfurization (FGD), have not been applied to CTs.

FGD systems have been applied to oil- and coal-fired steam electric power plants. However, the relative gas volume for such facilities is significantly less than that for CTs (i.e., about 2 to 3 times) and the resultant SO_2 concentration is considerably higher. While the former factor will influence the cost of FGD, the latter poses significant technological constraints to removing SO_2. As a result, FGD is not feasible for application to CTs.

The BACT/LAER clearinghouse documents (EPA, 1985b, 1986, 1987c, and 1988c) show fuel sulfur contents from 0.8 percent to less than 0.2 percent have been specified as BACT for CTs. The lowest sulfur containing fuels were required in California and New Jersey, where LAER decisions dictated more stringent standards. Furthermore, such requirements generally limited fuel oil use for backup or emergency purposes only.

For the repowered units, the only technically feasible control technology for SO_2 is low sulfur fuel use. The use of natural gas will clearly minimize SO_2 emissions. SO_2 emissions from distillate fuel can be minimized by specification of a lower sulfur content fuel, or blending of a lower sulfur content fuel, such as No. 1 fuel oil or kerosene, with No. 2 fuel oil. To reduce the uncertainties of supplier reliability, the blending of kerosene, a commonly available low sulfur fuel, was selected as an alternative control technology considered for the project. A sulfur content of 0.2 percent was selected as the top down BACT level since it is near the lowest of sulfur contents contained in the BACT clearinghouse documents.

4.3.3.2 Technology Description

The No. 2 fuel oil used in the repowered units will have a maximum sulfur content of 0.5 percent with a nominal average of 0.3 percent. For the purposes of this analysis, the maximum sulfur content of 0.5 percent was assumed. Kerosene has a maximum sulfur content of approximately 0.05 percent.

To obtain an average sulfur content of 0.2 percent, No. 2 fuel oil and kerosene would have to be blended in a ratio of about 1 to 2. Blending would require a separate storage tank, transfer pumps, mixing tank and mixing equipment.

The maximum emissions on No. 2 fuel oil would be 15,082.8 TPY (see Table 2-6) and would be 6,033.1 TPY on a blended fuel with a sulfur content of 0.2 percent.

4.3.3.3 Impact Analysis

ECONOMIC

The differential capital and annualized cost of utilizing 0.2 percent sulfur oil in place of 0.5 percent sulfur fuel oil is presented in Table 4-6. The total differential annualized cost for utilizing a maximum 0.2 percent sulfur fuel was estimated to be $46,479,242. The resulting cost effectiveness is $5,136/ton of SO_2 removed. Based on a more typical sulfur content of 0.3 percent for No. 2 fuel oil, the cost effectiveness would be $15,408/ton of SO_2 removed.

ENVIRONMENTAL

Based upon use of 0.5 percent sulfur fuel oil, the maximum SO_2 impacts of the repowered units alone will be less than 22 percent of the AAQS for SO_2, and less than 54 percent of the allowable PSD Class II increments. As a result, significant air quality benefits will not occur by reducing fuel sulfur content below that in No. 2 fuel oil, particularly considering the primary fuel will be natural gas, and existing Units 4 and 5, which use No. 6 fuel oil containing 1 percent sulfur, will be shut down.

Table 4-6. Capital and Annual Costs for Alternative SO_2 Control Technology

Item	Cost	Basis
CAPITAL COSTS COMPONENTS:		
Fuel Tank and Associated Equipment	$5,000,000	Note 1
System Installation	$750,000	Note 1
Engineering, Construction Supervision, and Startup	$575,000	Note 1
Tax (material only)	$379,500	
Escalation	$1,039,198	5%
Interest During Construction	$662,894	
Contingency	$1,681,318	
Total Capital Cost	$10,087,910	
Annualized Capital Cost	$1,251,910	Note 2
OPERATING AND MAINTENANCE:		
Fuel Costs	$28,646,967	Note 3
Operating Personnel	$40,000	
Miscellaneous Parts	$50,000	
Escalation	$287,370	
Contingency	$143,685	
Total Annual Cost	$29,168,021	
Levelized Annual Cost	$46,479,242	Note 4
TOTAL ANNUALIZED COSTS:	$47,731,151	

Notes: 1. Based on engineering estimate.
2. Capital recovery factor based on 12 percent interest over 30 years.
3. $0.07 per gallon average price differential.
4. Levelizing factor based on 12 percent interest, 30 years and 5 percent escalation rate.

ENERGY

No substantial energy penalties are expected to result from the blending of kerosene with No. 2 fuel oil.

4.3.3.4 Proposed BACT and Rationale

The proposed BACT for the repowered units is the use of natural gas and No. 2 fuel oil with a maximum sulfur content of 0.5 percent. The selection of this control alternative is based upon the following:

1. The blending of kerosene is not cost effective or economically feasible. In addition, it is uncertain if the quantities of kerosene required to be blended with No. 2 fuel oil could be obtained.
2. There is no significant environmental benefit in using fuel oil with less than 0.5 percent sulfur content.

4.3.4 Particulate Emissions/PM10

The emission of particulates from the CTs is a result of incomplete combustion and trace solids in the fuel (particularly fuel oil) and in the injected water or steam used for NO_x control. The design of the CTs ensures that particulate emissions will be minimized by combustion controls and the use of clean fuels. A review of EPA's BACT/LAER Clearinghouse Documents did not reveal any post-combustion particulate control technologies being used on gas/oil fueled CTs. The natural gas and No. 2, i.e. distillate, fuel oil to be used in the CTs will only contain trace quantities of particulate (0.05 percent ash, maximum in fuel oil). Therefore, the use of clean fuel and combustion design is the proposed BACT for total suspended particulate matter [PM(TSP)] and particulate matter smaller than 10 microns (PM10).

The maximum particulate emissions from the CTs when burning fuel oil will be of less concentration than that normally specified for fabric filter designs; i.e., the grain loading associated with the maximum particulate emissions (about 60 lb/hr) is less than 0.01 grains per standard cubic foot (gr/scf), which is a typical design specification

for a baghouse. This further demonstrates that no further particulate controls are necessary for the proposed project.

4.3.5 Other Regulated and Nonregulated Pollutant Emissions

The PSD source applicability analysis shows that PSD significance emission levels are exceeded for sulfuric acid mist, mercury, beryllium, and arsenic, requiring PSD review (including BACT) for these pollutants.

There are no technically feasible methods for controlling the emissions of these pollutants from CTs, other than the inherent quality of the fuel (see Section 4.3.3 and 4.3.4). In addition, the inherent efficiency of the combined cycle configuration of the repowered units minimizes the quality of fuel used relative to steam cycle plants, i.e., by about 20 percent. Sulfuric acid mist emissions are a direct function of the sulfur content of the fuel. Levels of trace metals in No. 2 distillate oil are limited by fuel oil specifications for the advanced CTs. Low sulfur No. 2 distillate oil represents BACT for these pollutants.

For the nonregulated pollutants, most of which are trace metals, none of the control technologies evaluated for other pollutants (i.e., SCR and oxidation catalyst) would reduce such emissions and low sulfur distillate oil represents BACT because of its inherent low metals content.

5.0 AIR QUALITY MONITORING DATA

5.1 PSD PRECONSTRUCTION MONITORING REQUIREMENTS

As determined by the source applicability analysis described in Section 3.4, an ambient monitoring analysis is required by PSD regulations for SO_2 only. In order to satisfy these requirements, FPL developed a PSD air quality monitoring plan for the Lauderdale Repowering Project (KBN, 1988). The plan was submitted to FDER in August 1988 and was subsequently approved. Descriptions of the ambient air quality monitoring network design, rationale for monitoring locations and parameters, description of monitoring sites and sampling equipment are presented in the air monitoring plan. The attachment to the plan presents the Quality Assurance and Standard Operating Procedures used to perform the monitoring. These procedures, as well as the ambient air quality and meteorological data collected as part of this program, are included in Appendix 10.5.1 of the SCA.

The SO_2 monitoring data collected for PSD purposes are described in Section 5.2. Although pollutants other than SO_2 are not required to be monitored under PSD regulations, background concentrations for other criteria pollutants are important for assessing compliance of the proposed project with AAQS. As described in Section 6.0, emissions of NO_x and SO_2 will require full modeling analysis under PSD regulations.

Background concentrations are air quality concentrations due to air emission sources not explicitly accounted for in the air dispersion modeling analysis (see Section 6.0). To estimate existing background concentrations, existing air monitoring data are used. Existing ambient data and background concentration estimates are presented in Sections 5.2 and 5.3 for SO_2 and NO_2, respectively. Meteorological data were also collected by the FPL PSD monitoring network. Collected data are summarized in Section 5.4.

5.2 SULFUR DIOXIDE

The PSD approved air monitoring network for the Lauderdale Repowering Project contained two continuous SO_2 monitoring stations: FPL Davie Substation site and FPL Pinehurst Substation site (see Figure 5-1). In addition to these data, ambient monitoring data from Broward County were available from FDER and other FPL-operated air monitoring stations. Locations of the monitoring sites in the vicinity of the site are shown in Figure 5-1.

Ambient SO_2 data collected at these air monitoring sites for the period 1986 through 1988 are presented in Table 5-1. Data are available from four FDER sites (one collocated monitor) and five FPL sites. All data are collected by the 24-hour bubbler method, except for the FPL Pinehurst and Davie sites, which have continuous monitors. All of the bubbler data are gathered utilizing required quality assurance (QA) procedures for bubbler data, while the continuous monitors meet PSD QA criteria.

As indicated in Table 5-1, all recorded SO_2 concentrations are low and well below the AAQS. The highest measured 3-hour concentration at any monitor was 189 $\mu g/m^3$ at the FPL Pinehurst site, and the highest measured 24-hour concentration was 42 $\mu g/m^3$, measured at the FPL Pinehurst site. These values are well below the AAQS of 1,300 $\mu g/m^3$, 3-hour average, and 260 $\mu g/m^3$, 24-hour average.

The highest recorded annual mean SO_2 concentration at any site was 5 $\mu g/m^3$, recorded at the FPL Pinehurst site. This concentration is well below the AAQS of 60 $\mu g/m^3$ for the annual averaging period.

Background SO_2 concentrations for use in the impact analysis are based upon the second maximum 3-hour and 24-hour concentration and the maximum annual average concentration measured at any monitoring location in the vicinity of the Lauderdale Plant site. This conservative assumption was employed since the observed values were low compared to AAQS. The resulting background concentrations are: 138 $\mu g/m^3$, 3-hour; 42 $\mu g/m^3$,

24-hour; and 5 $\mu g/m^3$, annual average. These background levels are also considered conservative since they reflect current operation of Units 4 and 5 at Lauderdale, which will be shut down after startup of the repowered units.

5.3 NITROGEN DIOXIDE

Available NO_2 data from monitoring sites located in the vicinity of the Lauderdale Plant site are presented in Table 5-2. Data are available from four FDER sites and four FPL sites, and cover the period 1986 through 1988. All sites are 24-hour bubbler sites, except for the FPL Pinehurst site that has a continuous monitor. All data have been gathered utilizing recommended quality assurance techniques for bubbler and continuous monitors.

The highest measured annual mean NO_x concentration was measured at Site 1260-003 in 1986, and was 47 $\mu g/m^3$. This level is roughly one-half the AAQS of 100 $\mu g/m^3$, annual average concentration. An annual average concentration of 26 $\mu g/m^3$ was measured at the FPL Pinehurst site.

The annual average concentration used in the analysis was obtained from the continuous monitor located at the FPL Pinehurst Substation since the federal reference is continuous. A value of 26 $\mu g/m^3$ measured at Site 1260-003 was used to represent the background NO_2 concentration in the air quality impact analysis. As in the case of the background NO_2 concentration, this background level is considered conservative since it is representative of impacts from the existing Lauderdale Units 4 and 5, as well as other sources explicitly included in the modeling analysis.

5.4 METEOROLOGICAL DATA

Wind speed and direction, temperature and precipitation were collected at the FPL Pinehurst site. A 10-m meteorological tower was installed with the windspeed and direction, and temperature measurements; the precipitation-measuring gauge was installed on the ground. The output of

these sensors was connected to a data-acquisition system housed in a shelter. The data from this monitoring are contained in Appendix 10.5.1 of the SCA.

6.0 AIR QUALITY MODELING APPROACH

6.1 GENERAL MODELING APPROACH

The general modeling approach followed EPA and FDER modeling guidelines for determining compliance with AAQS and PSD increments. In general, when model predictions are used to determine compliance with AAQS and PSD increments, current policies stipulate that the highest annual average and highest, second-highest (HSH) short-term (i.e., 24 hours or less) concentrations be compared to the applicable standard when 5 years of meteorological data are used. The HSH concentration is calculated for a receptor field by:

1. Eliminating the highest concentration predicted at each receptor,
2. Identifying the second-highest concentration at each receptor, and
3. Selecting the highest concentration among these second-highest concentrations.

This approach is consistent with the air quality standards, which permit a short-term average concentration to be exceeded once per year at each receptor.

To develop the maximum short-term concentrations for the facility, the general modeling approach was divided into screening and refined phases to reduce the computation time required to perform the modeling analysis. The basic difference between the two phases is the receptor grid used when predicting concentrations, and the number of meteorological periods evaluated. In general, concentrations for the screening phase were predicted using a coarse receptor grid and a 5-year meteorological record.

After a final list of HSH short-term concentrations was developed, the refined phase of the analysis was conducted by predicting concentrations for a refined receptor grid centered on the receptor at which the HSH concentration from the screening phase was produced. The air dispersion model was then executed for the meteorological periods during which both

the highest and second-highest concentrations were predicted to occur at that receptor, based on the screening phase results. This approach was used to ensure that valid HSH concentrations were obtained. More detailed descriptions of the emission inventory and receptor grids used in the screening and refined phases of the analysis are presented in the following sections.

6.2 MODEL SELECTION

The selection of the appropriate air dispersion model was based on its applicability to simulate impacts in areas surrounding the Lauderdale Plant site. Within 50 km of the site, the terrain can be described as simple, i.e., flat to gently rolling. As defined in the EPA modeling guidelines, simple terrain is considered to be an area where the terrain features are all lower in elevation than the top of the stack(s) under evaluation. Therefore, a simple terrain model was selected to predict maximum ground-level concentrations.

The Industrial Source Complex (ISC) dispersion model (EPA, 1988a) was selected to evaluate the pollutant emissions from the repowered units and other modeled sources. This model is contained in EPA's User's Network for Applied Modeling of Air Pollution (UNAMAP), Version 6 (EPA, 1988b). The ISC model is applicable to sources located in either flat or rolling terrain where terrain heights do not exceed stack heights.

The ISC model consists of two sets of computer codes which are used to calculate short- and long-term ground level concentrations. The main differences between the two codes are the input format of the meteorological data and the method of estimating the plume's horizontal dispersion.

The first model code, the ISCST model, is an extended version of the single-source (CRSTER) model (EPA, 1977). The ISCST model is designed to calculate hourly concentrations based on hourly meteorological parameters (i.e., wind direction, wind speed, atmospheric stability, ambient

temperature, and mixing heights). The hourly concentrations are processed into non-overlapping, short-term and annual averaging periods. For example, a 24-hour average concentration is based on 24 1-hour averages calculated from midnight to midnight of each day. For each short-term averaging period selected, the highest and second-highest average concentrations are calculated for each receptor. As an option, a table of the 50 highest concentrations over the entire field of receptors can be produced.

The second model code within the ISC model is the ISC long-term (ISCLT) model. The ISCLT model uses joint frequencies of wind direction, wind speed, and atmospheric stability to calculate seasonal and/or annual average ground-level concentrations. Because the input wind directions are for 16 sectors, with each sector defined as 22.5 degrees, the model calculates concentrations by assuming that the pollutant is uniformly distributed in the horizontal plane within a 22.5 degree sector.

In this analysis, the ISCST model was used to calculate both short-term and annual average concentrations because these concentrations are readily obtainable from the model output. In general, experience has demonstrated that the ISCST model will produce higher annual average concentrations as compared to the ISCLT model.

Major features of the ISCST model are presented in Table 6-1. Concentrations due to stack and volume sources are calculated by the ISCST model using the steady-state Gaussian plume equation for a continuous source. The area source equation in the ISCST model is based on the equation for a continuous and finite crosswind line source. The ISC model has rural and urban options which affect the wind speed profile exponent law, dispersion rates, and mixing-height formulations used in calculating ground level concentrations. The criteria used to determine when the rural or urban mode is appropriate are based on land use near the proposed plant's surroundings (Auer, 1978). If the land use is classified as heavy industrial, light-moderate industrial, commercial, or compact residential

Table 6-1. Major Features of the ISCST Model

ISCST Model Features
• Polar or Cartesian coordinate systems for receptor locations
• Rural or one of three urban options which affect wind speed profile exponent, dispersion rates, and mixing height calculations
• Plume rise due to momentum and buoyancy as a function of downwind distance for stack emissions (Briggs, 1969, 1971, 1972, and 1975)
• Procedures suggested by Huber and Snyder (1976); Huber (1977); and Schulmann and Hanna (1986) and Schulmann and Scire (1980) for evaluating building wake effects
• Procedures suggested by Briggs (1974) for evaluating stack-tip downwash
• Separation of multiple point sources
• Consideration of the effects of gravitational settling and dry deposition on ambient particulate concentrations
• Capability of simulating point, line, volume and area sources
• Capability to calculate dry deposition
• Variation with height of wind speed (wind speed-profile exponent law)
• Concentration estimates for 1-hour to annual average
• Terrain-adjustment procedures for elevated terrain including a terrain truncation algorithm
• Receptors located above local terrain, i.e., "flagpole" receptors
• Consideration of time-dependent exponential decay of pollutants
• The method of Pasquill (1976) to account for buoyancy-induced dispersion
• A regulatory default option to set various model options and parameters to EPA recommended values (see text for regulatory options used)
• Procedure for calm-wind processing

Source: EPA, 1988a.

for more than 50 percent of the area within a 3 km radius circle centered on the proposed source, the urban option should be selected. Otherwise, the rural option is more appropriate.

For modeling analyses that will undergo regulatory review, such as PSD permit applications, the following model features are recommended by EPA (1987a) and are referred to as the regulatory options in the ISCST model:

1. Final plume rise at all receptor locations,
2. Stack-tip downwash,
3. Buoyancy-induced dispersion,
4. Default wind speed profile coefficients for rural or urban option,
5. Default vertical potential temperature gradients,
6. Calm wind processing, and
7. Reducing calculated SO_2 concentrations in urban areas by using a decay half-life of 4 hours (i.e., reduce the SO_2 concentration emitted by 50 percent for every 4 hours of plume travel time).

In this analysis, the EPA regulatory options were used to address maximum impacts. Based on a review of the land use around the facility and discussions with the FDER, the rural mode was selected based on the degree of residential, industrial and commercial development within 3 km of the Lauderdale Plant site.

6.3 METEOROLOGICAL DATA

Meteorological data used in the ISCST model to determine air quality impacts consisted of a concurrent 5-year period of hourly surface weather observations and twice-daily upper air soundings from the National Weather Service (NWS) stations at Miami International Airport and West Palm Beach, respectively. The 5-year period of meteorological data was from 1982 through 1986. The NWS station in Miami, located approximately 30 km to the south-southwest of the site, was selected for use in the study because it is the closest primary weather station to the study area with similar surrounding topographical features. This station also has the most

readily available and complete database which is representative of the Lauderdale Plant site.

The surface observations included wind direction, wind speed, temperature, cloud cover, and cloud ceiling height. The wind speed, cloud cover, and cloud ceiling values were used in the ISCST meteorological preprocessor program to determine atmospheric stability using the Turner stability scheme. Based on the temperature measurements at morning and afternoon, mixing heights were calculated from the radiosonde data at West Palm Beach International Airport using the Holzworth approach (Holzworth, 1972). The West Palm Beach International Airport is located about 70 km north of the site. Hourly mixing heights were derived from the morning and afternoon mixing heights using the interpolation method developed by EPA (Holzworth, 1972). The hourly surface data and mixing heights were used to develop a sequential series of hourly meteorological data (i.e., wind direction, wind speed, temperature, stability, and mixing heights). Because the observed hourly wind directions at the NWS stations are classified into one of thirty-six 10-degree sectors, the wind directions were randomized within each sector to account for the expected variability in air flow. These calculations were performed using the EPA RAMMET meteorological preprocessor program.

6.4 EMISSION INVENTORY

6.4.1 Proposed Repowered Units

Stack operating parameters and air emission rates for the repowered Units 4 and 5 were presented in Section 2.0, Tables 2-1 through 2-4. As described in Section 2.0, the highest emissions and lowest flow rate for the CT/HRSG units were used in the modeling analysis.

6.4.2 Existing Lauderdale Plant Sources

The existing sources consist of Units 4 and 5 stacks and gas turbines GT 1 through GT 24. Stack parameters and maximum air emission rates for these sources were presented in Table 2-10. Units 4 and 5 were modeled to determine the net change in air quality impacts due to the shutdown of

Units 4 and 5 and the startup of the repowered Units 4 and 5. Data for the existing gas turbines (GT 1 through GT 24) were used in assessing future compliance with AAQS.

6.4.3 Other Air Emission Sources

Modeling of the repowered units demonstrated that the facility's impacts are above the significant impact levels for SO_2 and NO_2 at distances of approximately 70 and 30 km, respectively, from the Lauderdale Plant site. Therefore, the emission inventories for these pollutants were developed from available databases.

FDER supplied KBN with QLP printouts of the facilities within a 100 km square centered on the site (UTM coordinates: East 580.3 km, North 2883.3). FDER also provided KBN with AIR 10 reports for Broward, Dade, and Palm Beach counties. Using this information, supplemented with data from permits, PSD applications, and previous modeling analyses, the SO_2 and NO_2 emitting facilities within 50 km of the location of the site were identified.

Facilities located within 15 km of the Lauderdale Plant site, with SO_2 or NO_2 emissions greater than 25 TPY, are presented in Tables 6-2 and 6-3, respectively. These facilities were included explicitly in the modeling analysis. Facilities located 15 to 50 km from the site, with SO_2 or NO_2 emissions greater than 100 TPY, are presented in Tables 6-4 and 6-5. These facilities were subject to further screening to determine the potential of significant interaction with the repowered units. An additional source, FPL-Turkey Point, was also included in the modeling analysis due to its relative emissions and potential impacts, although this facility is more than 70 km from the Lauderdale Plant.

As described above, each facility between 15 and 50 km from the site was further screened to determine the probability of source interaction. The recommended screening technique is the Screening Threshold method developed by the North Carolina Department of Natural Resources and Community

E = Emission rate based on ESTIMATED emission information in APIS, because no information was available on allowable or actual emissions.

???? indicates no APIS was provided.

Source: FDER, 1989.

Development, approved by EPA and FDER. The method is designed to objectively eliminate from the emission inventory those facilities which are not likely to have significant interaction with the source undergoing evaluation. In general, facilities that should be considered in the modeling analyses are those with emissions greater than Q (in TPY), which is calculated by the following criterion:

$$Q = 20 \times D$$

where D is the distance (km) from the particular source to the source undergoing evaluation (i.e., from the site).

A listing of the SO_2 and NO_2 facilities in the inventory with associated maximum or allowable emissions, distance from the proposed site, and associated Q are presented in Tables 6-6 and 6-7, respectively. For the South Broward County Resource Recovery Project (SBCRRP), SO_2 and NO_2 emissions were increased to accommodate a fourth unit into the project. Those facilities with maximum allowable emissions which are below the calculated screening threshold were eliminated from further consideration in the modeling analysis. The remaining facilities, along with all facilities greater than 25 TPY emissions and located within 15 km of the site, comprise the facility list used in the modeling. A summary of SO_2 and NO_x sources used in the modeling is presented in Tables 6-8 and 6-9, respectively. PSD increment-affecting sources are noted and were used in the PSD modeling analysis.

6.5 RECEPTOR LOCATIONS

As discussed in Section 6.1, the general modeling approach considered screening and refined phases to address compliance with maximum allowable PSD Class I and Class II increments and AAQS. In the ISCST modeling, concentrations were predicted for the screening phase using several receptor grids. The locations of the receptors were based on identifying the areas in which maximum concentrations are predicted due to the repowered units.

A description of the receptor locations for determining compliance with PSD increments and AAQS is as follows:

1. 471 receptors located in a radial grid centered on the repowered units. These receptors were classified into two main groups: (1) plant boundary receptors and (2) near-field receptors.
2. The grid for the plant boundary receptors consisted of 36 receptors, presented in Table 6-10.
3. The grid for the near-field receptors consisted of 435 receptors located at distances of 600, 900, 1,200, 1,600, 2,000, 2,500, 3,000, 4,000, 5,000, 6,000, 7,000 and 8,000 m along 36 radials with each radial spaced at 10 degree increments. If receptors were on plant property, they were not included. For example, as shown in Table 6-10, the extent of plant property in a 50-degree direction from the proposed unit is 2,280 m. Therefore, receptors placed along that radial at 600, 900, 1,200, and 1,600 m were not included.
4. 22 receptors located along the north and east boundaries of the Everglades National Park for the PSD Class I analysis. The locations of these receptors are presented in Table 6-11.

After the screening modeling was completed, refined short-term modeling was conducted using a receptor grid centered on the receptor which had the HSH short-term concentrations from the screening analysis. The receptors were located at intervals of 100 m between the distances considered in the screening phase, along 9 radials spaced at 2 degree increments, centered on the radial along which the maximum concentration was produced. For example, if the maximum concentration was produced along the 90 degree radial at a distance of 1.6 km, the refined receptor grid would consist of receptors at the following locations:

Directions (degrees)	Distance (km)
82, 84, 86, 88, 90, 92, 94, 96, 98	1.3, 1.4, 1.5, 1.6, 1.7, 1.8, and 1.9 per direction

21	556.6	2,792.0	-23.7	-91.3	94.3
22	557.0	2,789.0	-23.3	-94.3	97.1

[a]The UTM coordinates of the proposed units are 580.3 km east and 2,883.3 km north.

To ensure that a valid HSH concentration was calculated, concentrations were predicted using the refined grid for the periods that produced both the highest and HSH concentrations from the screening receptor grid.

Refined modeling analysis was not performed for the annual averaging period, because the spatial distribution of annual average concentrations are not expected to vary significantly from those produced from the screening analysis.

6.6 BACKGROUND CONCENTRATIONS

Background concentrations used in the air quality impact analysis are discussed in Section 5.0. The SO_2 background concentrations used in the AAQS analysis were 138 $\mu g/m^3$, 42 $\mu g/m^3$ and 5 $\mu g/m^3$ for averaging times of 3-hour, 24-hour and annual, respectively. For NO_2, the background concentration used for comparison with AAQS was 26 $\mu g/m^3$.

6.7 BUILDING DOWNWASH EFFECTS

Based on the building dimensions associated with buildings and structures planned at the Lauderdale Plant, the stacks for the CT/HRSG units will be less than GEP. In addition, the existing Units 4 and 5 stacks are below GEP height based upon the existing boiler buildings. Some of the existing GT 1 through GT 12 units also have the potential to be affected by building downwash. Therefore, the potential for building downwash to occur was considered in the modeling analysis.

The procedures used for addressing the effects of building downwash are those recommended in the ISC Dispersion Model User's Guide. The building height, length, and width are input to the model, which uses these parameters to modify the dispersion parameters. For short stacks (i.e., physical stack height is less than $H_b + 0.5\ L_b$, where H_b is the building height and L_b is the lesser of the building height or projected width), the Schulman and Scire method is used. If this method is used, then direction-specific building dimensions are input for H_b and L_b for 36 radial directions, with each direction representing a 10 degree sector.

The features of the Schulman and Scire method are: 1) reduced plume rise due to initial plume dilution, 2) enhanced plume spread as a linear function of the effective plume height, and 3) specification of building dimensions as a function of wind direction.

For cases where the physical stack is greater than $H_b + 0.5\ L_b$ but less than GEP, the Huber-Snyder method is used. For this method, the ISCST model calculates the area of the building using the length and width, assumes the area is representative of a circle, and then calculates a building width by determining the diameter of the circle. If a specific width is to be modeled, then the value input to the model must be adjusted according to the following formula:

$$M_w = \sqrt{\frac{\pi W^2}{4}}$$

$$M_w = 0.8886\ W$$

where: M_w is input to the model to produce a building width of W used in the dispersion calculation. W is the actual building width.

The building dimensions considered in the modeling analysis are presented in Table 6-12. In the case of the existing Units 4 and 5, the Unit 4 and 5 stacks are located adjacent to the existing boiler buildings and are affected by downwash for all directions. Similarly, the proposed repowered Unit 4 and 5 stacks are located adjacent to the proposed gas turbine environmental enclosure building. Downwash effects, if any, would occur for essentially all wind directions. For the existing gas turbines (i.e., GT 1 through GT 12, several units will be affected by building downwash due to the proposed environmental enclosure building. However, the downwash potential is limited to certain wind directions and only affects two of the gas turbines, located closest to the CT environmental enclosure.

Investigations into the stack design of the GTs revealed that noise reduction baffles are located within all but the last stack section. These

Table 6-12. Building Dimensions Used in ISCST Modeling Analysis To Address Potential Building Wake Effects

Source	Associated Building	Actual Building Dimensions Length (m)	Width (m)	Height (m)	Projected Width[a] (m)	Modeled Building Dimensions Length, Width (m)	Height (m)

Units 4 and 5	Units 4 and 5 Boiler Building	17.3	12.7	36.4	21.4	19.0	36.4
Gas Turbines 1-12	CT Environmental Enclosure	123.4	70.9	22.9	142.4	126.0	22.9
Gas Turbines 13-24	None	--	--	--	--	--	--

[a]Diagonal of actual building dimensions.

baffles cause the actual stack gas velocity to be higher than what was previously determined from the exit diameter. Because of the potential from downwash from these units, the stack gas diameter will be adjusted by modifying the last stack section so that the exit velocity is the same as that going through the baffles. The stack velocity and diameter used in the modeling analysis was 54.3 m/s and 11.3 m, respectively.

7.0 AIR QUALITY MODELING RESULTS

7.1 PROPOSED UNITS ONLY

A summary of the maximum predicted impacts of regulated pollutants due to the proposed units only, based on the screening and refined analysis, is presented in Table 7-1. The operating conditions used in the analysis were based on maximum emissions (i.e., 40°F or ISO conditions) and minimum flow rate (i.e., 95°F) for the repowered units.

The maximum predicted 3-hour, 24-hour, and annual SO_2 concentrations are 275, 43.9 and 4.8 $\mu g/m^3$, respectively. These maximum impacts are all above the significance levels established by EPA and FDER, and therefore further modeling analysis is required for SO_2 to demonstrate compliance with PSD increments and AAQS.

The maximum predicted 24-hour and annual average PM(TSP) concentrations due to the repowered units only are 3.0 and 0.32 $\mu g/m^3$, respectively. Maximum PM10 impacts are identical to the PM(TSP) impacts. Since these maximum concentrations are below the significance levels for these pollutants, no further modeling analysis is necessary. Because of these very low impacts, the repowered units would not cause or significantly contribute to any exceedances of the PM10 AAQS or the PM(TSP) PSD increments.

The maximum predicted annual NO_2 concentration due to the repowered units only is 2.3 $\mu g/m^3$. This level of impact is above the significance level. However, the impacts combined with the offset afforded by Units 4 and 5 bring the impacts below the significant impact levels. Nonetheless, further evaluation of NO_x was performed.

The maximum predicted 1- and 8-hour average CO concentrations due to the repowered units are 61 and 13 $\mu g/m^3$, respectively. These maximum impacts are less than the CO significance impact levels. Because the maximum

Table 7-1. Results of Modeling Analysis of the Lauderdale Repowering Project

Pollutant	Averaging Period	Maximum Predicted Concentrations ($\mu g/m^3$)[a] Repowered Units Only	Repowered Units With Offsets	Significance Impact Level
Sulfur Dioxide	3-hour	275	259	25
	24-hour	44	36	5

	8-hour	13	b	500
Lead	Calendar Quarter	0.00032	<0.00032	--

[a]Based upon 4 CTs/HRSGs operating at maximum load.
[b]Not modeled because predicted concentrations due to the proposed units only were less than significance level.

Note: $\mu g/m^3$ = micrograms per cubic meter.

predicted impacts due to the repowered units are less than the CO significance levels, additional modeling is not required for this pollutant.

The maximum predicted Pb concentration (calendar quarter average) is predicted to be 0.00032 $\mu g/m^3$. No significance level has been established for Pb, but an AAQS has been set at 1.5 $\mu g/m^3$, calendar quarter average. Since the predicted impacts due to the repowered units only are well below the AAQS, no further modeling analysis was conducted.

7.2 PSD CLASS II INCREMENT ANALYSIS

Maximum SO_2 and NO_2 concentrations predicted from the screening analysis for comparison to the PSD Class II increments are presented in Tables 7-2 and 7-3, respectively. Based upon these results, the refined analysis was based on modeling the meteorological periods during which the overall HSH and associated highest 3-hour and 24-hour SO_2 concentrations were predicted in the screening analysis. The refined analysis for the annual average SO_2 and NO_2 concentrations was based on modeling the receptor and year which produced the highest annual concentration using the refined emission inventory. A summary of the maximum SO_2 and NO_2 PSD Class II increment consumption concentrations predicted in the refined analysis is presented in Table 7-4.

The maximum 3-hour average SO_2 PSD increment consumption from the refined analysis is predicted to be 322 $\mu g/m^3$, which is 63 percent of the maximum allowable PSD Class II increment of 512 $\mu g/m^3$, not to be exceeded more than once per year.

The maximum 24-hour average SO_2 PSD Class II increment consumption is predicted to be 51 $\mu g/m^3$, which is 56 percent of the maximum allowable PSD Class II increment of 91 $\mu g/m^3$, not to be exceeded more than once per year.

-- = not applicable.
$\mu g/m^3$ = micrograms per cubic meter.

The maximum annual average SO_2 PSD increment consumption is predicted to be 2.3 $\mu g/m^3$, which is 11.5 percent of the maximum allowable PSD Class II increment of 20 $\mu g/m^3$.

The maximum annual average NO_2 PSD Class II increment consumption from the refined analysis is predicted to be 5.9 $\mu g/m^3$, which is 24 percent of the maximum allowable PSD Class II increment of 25 $\mu g/m^3$.

7.3 AAQS ANALYSIS

The maximum 3-hour, 24-hour, and annual average total SO_2 concentrations predicted from the screening analysis are presented in Table 7-5. The maximum annual NO_2 concentrations due to all sources are shown in Table 7-6. The total concentrations were determined from the impacts of the modeled sources added to the background concentration (refer to Section 5.0). These results show that the maximum SO_2 and NO_2 concentrations due to all sources are below the AAQS for all averaging periods.

Similar to the PSD Class II increment analysis, the refined AAQS analysis was based on modeling the meteorological periods during which the overall HSH and associated highest 3-hour and 24-hour concentrations were predicted in the screening analysis. The maximum SO_2 and NO_2 concentrations predicted in the refined analysis are presented in Table 7-7.

The maximum 3-hour average SO_2 concentration due to all sources from the refined analysis is predicted to be 1,032 $\mu g/m^3$, which is 79 percent of the AAQS of 1,300 $\mu g/m^3$, not to be exceeded more than once per year. The repowering project contributed less than 31 percent of this maximum 3-hour average concentration.

	81	55	26	310	5.0	1983
	77	51	26	310	5.0	1984
	65	39	26	310	4.0	1985
	69	43	26	310	5.0	1986

[a]Relative to the location of the repowered units.

Note: Based on four CTs/HRSGs operating at maximum load and firing No. 2 fuel oil.

$\mu g/m^3$ = micrograms per cubic feet.

Table 7-7. Maximum Predicted SO_2 and NO_2 Concentrations from the Refined Analysis for Comparison to AAQS

Averaging Period	Concentration ($\mu g/m^3$) Total	Total due to: Modeled Sources	Total due to: Background	Receptor Location[a]: Direction (°)	Receptor Location[a]: Distance (km)	Period: Julian Day	Period: Hour Ending	Period: Year	AAQS
SO_2 Concentrations									
3-Hour[b]	1,032	894	138	232	0.110	322	12	1985	1,300
24-Hour[b]	253	211	42	236	0.110	322	--	1985	260
Annual	29	24	5	310	5.000	--	--	1982	60
NO_2 Concentration									
Annual	81	55	26	310	5.0	--	--	1983	100

[a]Relative to the location of the repowered units.

[b]Highest, second-highest concentrations predicted for this averaging period.

Note: Based on four CTs/HRSGs operating at maximum load and firing No. 2 fuel oil with 5 percent sulfur content.

-- = not applicable.

$\mu g/m^3$ = micrograms per cubic meter.

The maximum 24-hour average SO_2 concentration due to all sources is predicted to be 253 $\mu g/m^3$, which is 97 percent of the AAQS of 260 $\mu g/m^3$, not to be exceeded more than once per year. The repowering project contributed less than 20 percent of this maximum 24-hour average concentration.

The maximum annual average SO_2 concentration due to all sources is predicted to be 29 $\mu g/m^3$, which is 48 percent of the AAQS of 60 $\mu g/m^3$. The repowering project contributed less than 3 percent to the maximum concentration.

The maximum annual average NO_2 concentration of 81 $\mu g/m^3$ due to all sources is below the AAQS of 100 $\mu g/m^3$. The repowered units contributed less than 2 percent to the maximum concentration.

7.4 CLASS I AREA ANALYSIS

The results of the PSD Class I area modeling analysis for the Everglades National Park are presented in Tables 7-8 and 7-9 for SO_2 and NO_2, respectively. The modeling analysis evaluated a number of receptors along the boundary of the Class I area. Due to the large distance from the site to the Class I area boundary (approximately 60 km), no refined modeling analysis was conducted.

As shown in Table 7-8, total Class I PSD increment consumption concentrations for SO_2 are below the Class I increments for all averaging times. The maximum 3-hour increment consumption is predicted to be 15 $\mu g/m^3$, compared to the Class I increment of 25 $\mu g/m^3$. The maximum predicted 24-hour increment consumption for SO_2 is 4.4 $\mu g/m^3$, which is below the allowable increment of 5 $\mu g/m^3$. These maximum increment consumption values are due to the effects of two increment consuming sources located in Dade County: Tarmac Florida (cement plant) and Dade County Resource Recovery (MSW incinerator). The repowered units do not contribute to these maximum increment consumption values.

Table 7-8. Maximum Predicted SO_2 Concentrations for Comparison to PSD Class I Increments

Averaging Period	Maximum Concentration ($\mu g/m^3$) All Increment Consuming Sources	Maximum Concentration ($\mu g/m^3$) Contribution from Lauderdale Repowered Units[a]	Period Julian Day	Period Hour Ending	Period Year	PSD Class I Increment

	0.64	0.05	--	--	1986	

[a]Impacts by existing Units 4 and 5 reduce (offset) impacts from repowered units.
[b]Highest, second-highest concentrations predicted for this averaging period.

Note: Based on four CTs/HRSGs operating at maximum load and firing No. 2 fuel oil with 0.5 percent sulfur content.

-- = not applicable.
$\mu g/m^3$ = micrograms per cubic meter.

Table 7-9. Maximum Predicted NO_2 Concentrations for Comparison to PSD Class I Increments

Averaging Period	Maximum Concentration ($\mu g/m^3$) All Increment Consuming Sources	Maximum Concentration ($\mu g/m^3$) Contribution From Lauderdale Repowering Project[a]	Year
Annual	0.29	0.12	1982
	0.29	0.11	1983
	0.29	0.13	1984
	0.28	0.12	1985
	0.23	0.09	1986

[a]Includes offsets from Units 4 and 5.

Note: Based on four CTs/HRSGs operating at maximum load and firing No. 2 fuel oil.

The maximum predicted annual increment consumption concentrations in the Class I area are predicted to be <0.7 $\mu g/m^3$ for SO_2 and <0.3 $\mu g/m^3$ for NO_x (see Table 7-9). These values are well below the allowable Class I increments of 2 $\mu g/m^3$ for SO_2 and 2.5 $\mu g/m^3$ of NO_2.

8.0 EFFECTS TO AIR QUALITY RELATED VALUES AND VEGETATION, SOILS, VISIBILITY, AND GROWTH

8.1 AIR QUALITY RELATED VALUES

This section focuses on the ecological effects of the proposed facility's impacts on Air Quality Related Values (AQRV), as defined under PSD regulations, in the Everglades National Park. The AQRVs are defined as being:

> "All those values possessed by an area except those that are not affected by changes in air quality and include all those assets of an area whose vitality, significance, or integrity is dependent in some way upon the air environment. These values include visibility and those scenic, cultural, biological, and recreational resources of an area that are affected by air quality. Important attributes of an area are those values or assets that make an area significant as a monument, preserve, or primitive area. They are the assets that are to be preserved if the area is to achieve the purposes for which it was set aside" (Federal Register, 1978).

The AQRVs include freshwater and coastal wetlands, dominant plant communities, unique and rare plant communities, soils and associated periphyton, and the wildlife dependent upon these communities for habitat. Rare, endemic, threatened, and endangered species of the national park and bioindicators of air pollution (e.g., lichens) are also evaluated.

8.1.1 General Description

The Everglades National Park is a subtropical preserve located in the southern tip of Florida. The territorial area of the park, totaling 289,000 hectares (ha) (714,000 acres), is comprised of an estimated 133,000 ha (329,000 acres) of mangrove and saltmarsh, 148,000 ha (366,000 acres) of prairie, and 8,000 ha (20,000 acres) of pineland (Taylor and Herndon, 1981). Small islands of tropical hardwood hammock, evergreen temperate swamp (bayheads) and cypress swamp are interspersed among the larger vegetation communities.

Mangroves occupy most of the coastline. Species include red mangrove (Rhizophora mangle), black mangrove (Avicennia germinans), and white mangrove (Laguncularia racemosa).

The seasonally inundated prairie is the largest vegetation community in the national park. This wetland is dominated by sawgrass (Cladium jamaicense), muhlygrass (Muhlenbergia filipes), and/or little bluestem (Schizachyrium rhizomatum) growing on thin marl overlying oolitic limestone. Muhlygrass dominates the drier prairies; sawgrass occurs where the hydroperiod is longer than 5-months. Algal periphyton mats are usually present in these prairies. Marl is the predominant soil in the prairies. It is a calcareous substance precipitated by the blue-green algae of the periphyton mats. The algae comprising the periphyton are important primary producers and are dependent upon calcium-rich waters (Gleason and Spackman, 1973). Sawgrass sometimes occurs on pockets of peat within the marl-limestone substrate.

The pinelands occur on a rough limestone (Miami oolite) with many crevices and solution holes, but very little soil development (Loope, et al., 1979). The single canopy tree in this vegetation type is South Florida slash pine (Pinus elliottii var. densa). The understory is diverse and includes tropical hardwoods and herbaceous species endemic to South Florida. Although pinelands were once the dominant upland community in South Florida, very little of this community type remains outside of the national park boundaries.

The hardwood hammocks range up to a few hectares in size and number in the thousands. They occur on small areas of ground higher than the surrounding prairie. Dominant species include gumbo-limbo (Bursera simaruba), poisonwood (Metopium toxiferum), buckthorn (Bumelia salicifolia), strangler fig (Ficus aurea), and pigeon-plum (Coccoloba diversifolia). Other important trees and shrubs include myrsine (Myrsine floridana), wild tamarind (Lysiloma latisiliquum), white stopper (Eugenia axillaris), wild coffee (Psychotria nervosa), and marlberry (Ardisia escallonioides). The hardwood hammocks contain numerous tropical plant species not found anywhere else in the United States (Loope and Urban, 1980). Epiphytic orchids and bromeliads are frequent. The hammocks grow on eroded limestone covered with a shallow layer of organic soil (Olmsted, et al., 1980).

The temperate swamp hardwoods occupy seasonally inundated areas and are dominated by redbay (Persea borbonia), wax myrtle (Myrica cerifera), sweetbay (Magnolia virigniana), and dahoon (Ilex cassine). Pond apple (Annona glabra), cocoplum Chrysobalanus icaco), and buttonbush (Caphalanthus occidentalis) are in the shrub layer. Ferns are common in the ground layer and epiphytes include Tillandsia spp. and Encyclia tampensis. The substrate is peat varying in depth from 30 to 200 cm over limestone.

Both bald cypress (Taxodium distichum) and pond cypress (Taxodium ascendens) occur in the national park. The understory of cypress-dominated communities is typically open and contains many of the same species that are present in the temperate swamp hardwood communities. Ferns usually dominate the ground layer. Epiphytic vascular plants and lichens are abundant. The substrate is peat or peaty marls.

Bark-dwelling lichens are abundant in hardwood and cypress hammocks and on ornamental trees planted at visitor centers at the national park. Lichens are important both for their intrinsic functions in the park ecosystem and for their use as bioindicators based on their sensitivity to air pollution. They serve as food for invertebrates, provide a germination substrate for vascular epiphytes, and some species fix nitrogen. In addition, because lichens are sensitive to air pollution, impacts of air pollution on the national park vegetation can be evaluated by determining the threshold levels of pollutants known to be injurious to lichens. If projected pollutant levels are below amounts known to adversely impact lichens, then less sensitive vascular plants are very unlikely to be affected.

Vascular epiphytes, many of them threatened or endangered species, are common in tree hammocks. Most of these are orchids (Epidendrum spp., Oncidium spp.) and bromeliads (Catopsis beteroniana, Catopsis nutans, Tillandsia balbisiana eg.). These plants obtain water and essential elements from precipitation and much of their surface area is exposed to

airborne contaminants. Therefore, vascular epiphytes may potentially be sensitive to air pollutants.

No plant species in the park are listed by the U.S. Fish and Wildlife Service as threatened or endangered. There are species that could occur in the region that are either under review for listing by the Fish and Wildlife Service or protected by the State of Florida under the Preservation of Native Flora of Florida Act (Table 8-1).

Characteristics of the major soil associations found within the national park are summarized in Table 8-2. The soils consist primarily of histosols and shallow entisols over limestone substrate.

Threatened and endangered wildlife species found in the national park are listed in Table 8-3. The primary habitats for each of these species are shown in Table 8-4.

8.1.2 Impacts to Vegetation

Sulfur is an essential plant nutrient usually taken up as sulfate ions by the roots from the soil solution. When sulfur dioxide in the atmosphere enters the foliage through pores in the leaves, it reacts with water in the leaf interior to form sulfite ions. Sulfite ions are highly toxic. They interact with enzymes, compete with normal metabolites, and interfere with a variety of cellular functions (Horsman and Wellburn, 1976). However, within the leaf, sulfite is oxidized to sulfate ions which can then be used by the plant as a nutrient. Small amounts of sulfite may be oxidized before they prove harmful.

If a plant is subject to long-term exposure to sulfur dioxide, sulfate may accumulate in the leaves because more is produced than can be utilized by the plant. Reduced yield and other impacts on growth and vigor may result from these chronic long-term exposures. Frequency of exposure is important. Low doses of sulfur dioxide followed by long periods of very low or no exposure may be less damaging than the same total dose received

Table 8-1. Rare Plants Occurrence Records for Region

SCIENTIFIC NAME	COMMON NAME	USFWS STATUS	FDA STATUS
SPECIAL PLANT			
Asclepias curtissii	Curtiss' milkweed		T
Conradina grandiflora	large-flowered rosemary	UR2	
Ernodea littoralis	beach-creeper		T
Jacquemontia reclinata	beach jacquemontia	UR2	E
Lechea cernua	nodding pinweed	UR2	
Myrcianthes fragrans var simponii	twinberry	UR2	
Okenia hypogaea	burrowing four-o'clock		E
Coccothrinax argentata	silver palm		C
Digitaria gracillima	longleaf crabgrass	UR2	
Epidendrum nocturnum	night-scented orchid		T
Hymenocallis latifolia	broad-leaved spiderlily	UR5	
Remirea maritima	beach-star		E
Tillandsia flexuosa	banded wild-pine		T
Acrostichum aureum	golden leather fern		E
Asplenium dentatum	slender spleenwort		T
Asplenium serratum	bird's nest spleenwort		E
Ophioglossum palmatum	hand fern	UR5	E

Note: C = Commercially exploited.
T = Threatened.
E = Endangered.
UR2 = Under review for listing, but substantial evidence of biological vulnerability and/or threat is lacking.
UR5 = Formally under review for listing, but no longer considered for listing because recent information indicates species is more widespread or abundant than previously believed.

Table 8-2. Summary of Characteristics of Major Soil Associations Found Within Everglades National Park

Soil Type/Association	Characteristics
Broward-Parkwood-Keri Association	Derived from moderately thin beds of sand over marl or relatively hard limestone. Parkwood soils are underlain by soft marl at somewhat deeper depths; the Keri series is typically comprised of layers of sand and marl within 100 cm from the surface.
Perrine-Ochopee Association	The Perrine series are poorly drained from recent unconsolidated, finely divided calcareous sediments and are generally associated with tidal swamps and marshes. Depth to underlying limestone is 20 to 91 cm. The Ochopee soils are poorly drained and originated from calcareous sands and marl.
Everglades-Brighton-Pamlico Association	Highly organic muck or peat soils formed from decomposition of emergent vegetation that overlie nearly neutral or alkaline sands and sandy clays. Underlain by marl or limestone. Everglades soils are slightly acid to alkaline; Brighton and Pamlico soils tend to be more acidic.
Tidal Marsh-Coastal Beach-Coastal Dunes	Restricted to the periphery of the coast and consists of nearly level salt marshes, coastal beach, and coastal dunes. Tidal exchange and sea salt deposition dominate the ionic balance and pH regime of these systems.
Rockland	Porous limestone through which water flows freely.

continuously, because plants can utilize the accumulated sulfate during the period of no exposure.

Plant species vary widely with regard to the threshold level of pollutants which cause injury or growth reduction. Plant response to sulfur dioxide emissions from the proposed Lauderdale facility will depend upon the concentration of the gas, the duration of each exposure, and the frequency of exposures. Near the facility (i.e., within 10 km), the pattern of exposure will consist of a few episodes of relatively high concentration for a short duration interspersed with long periods of extremely low concentrations. At longer distances from the facility, concentrations are generally low for long periods of time.

The proposed Lauderdale Repowering Project does not contribute to the maximum 1-hour, 3-hour, and 24-hour predicted concentrations due to the offsets afforded by Units 4 and 5. The proposed project contributes only 0.11 $\mu g/m^3$ to the annual average concentrations.

The exposures to SO_2 that have been shown by laboratory tests or field observations to adversely affect plant species that occur or are similar to those that occur in the national park are presented in Table 8-5. The most sensitive species are two lichen species, Ramalina denticulata and Parmotrema tinctorum, that are common in the park, but less abundant in urban areas east of the national park. Ramalina denticulata showed increased biomass gain and photosynthetic rate when exposed to 6-hours weekly of 100 $\mu g/m^3$ SO_2 for 10 weeks compared with exposure to ambient air. At similar exposures to 400 $\mu g/m^3$ SO_2 this lichen showed decreased biomass gain and photosynthetic rate as well as increased membrane damage. Parmotrema tinctorum exhibited increased membrane damage (as indicated by increased electrolyte leakage into solution) at 200 $\mu g/m^3$ SO_2 in comparison with lichens exposed only to ambient air. Exposures that impact these lichens are much higher than the concentrations and frequencies of SO_2 that will result from the proposed facility. No adverse impact to

Table 8-5. Lowest Doses of SO_2 Reported to Affect Plant Species Common in Site Region

Species	Lowest SO_2 Concentration ($\mu g/m^3$) Known to Affect Species	Reference
Parmotrema tinctorum	200, for 6 hours/week for 10 weeks. Increased percent electrolyte leakage. (240, for 3 hours/week for 6 weeks showed no effect on leakage, biomass gain, or photosynthetic rate.	Hart et al., 1988
Ramalina denticulata	400, for 6 hours/week for 10 weeks. Reduced biomass gain, lowered photosynthetic rate, and increased percent electrolyte leakage in comparison to effects of lower SO_2 concentrations.	Hart et al., 1988
Taxodium distichum (bald cypress)	1,300, for 48 hours did not affect dry weight gain.	Shanklin and Kozlowski, 1985
Taxodium distichum	1,300, for 8 hours caused no visible injury.	Woltz and Howe, 1981
Pinus elliottii (slash pine)	650, for 2 hours - Reduced needle growth.	Berry, 1974
Lycopersicon (tomato) escoulentum	1,258, for 5 hours on each of 57 days reduced growth.	Kohut et al., 1982
C_4 species - Amaranthus retroflexus, Setaria faberii, Setaria lutescens (foxtail grasses)	650, for 8 hours/day for 5 days during 2 weeks. Increased weight at normal CO_2 concentrations.	Carlson and Bazzaz, 1982

vegetative resources in the national park is expected to result from its operation.

The air quality effects to the vegetation in Pond Apple Slough Park located about 1,350 m (4,400 ft) northeast of the repowered units were also evaluated. The maximum 3-hour, 24-hour, and annual SO_2 concentrations due to the repowering project are predicted to be 71 $\mu g/m^3$, 9.1 $\mu g/m^3$, and 0.27 $\mu g/m^3$, respectively. These levels are substantially below those likely to cause effects.

Similiar to SO_2, the Lauderdale Repowering Project does not contribute to the maximum 1-hour, 3-hour, or 24-hour NO_2 concentrations in the Class I area. The annual impact due to repowering is 0.13 $\mu g/m^3$.

Ground-level NO_x concentrations include both nitric oxide (NO) and nitrogen dioxide (NO_2). Uptake of NO_2 by vegetation occurs at a higher rate than uptake of NO; therefore, effects of NO_2 on plants have been studied more closely than effects of NO. However, since NO is more toxic to photosynthesis than NO_2 (Saxe, 1986), the exposure of vegetation to total NO_x concentrations was evaluated. Both nitrogen oxide forms can be utilized by the plant as a nutrient if absorbed by the leaves at low concentrations. High concentrations can cause acute damage to the leaves and reduce growth. Okano and Totsuka (1986) reported that 564 $\mu g/m^3$ NO_2 supplied to sunflowers (Helianthus annus) for 7 days had no adverse effect on weight, whereas 3,760 $\mu g/m^3$ for 7 days was toxic.

No information on nitrogen oxide effects on species of the national park is available. However, oats, alfalfa, and tomato are reported to be especially sensitive to NO_2. Exposure of tomato to 470 $\mu g/m^3$ of NO_2 throughout the growing season decreased yield 22 percent (Spierings, 1971). Net photosynthesis in oats and alfalfa is inhibited at a threshold concentration of 1,128 $\mu g/m^3$ (Hill and Bennett, 1970). The expected NO_x concentration is much lower than any of these potentially adverse

concentrations and should, therefore, have no adverse impact on the national park vegetation.

Maximum NO_2 impacts due to the repowering project in the Pond Apple Slough Park are predicted to be 35 $\mu g/m^3$, 4.5 $\mu g/m^3$, and 0.13 $\mu g/m^3$ for the 3-hour, 24-hour and annual averaging times. These predicted impacts are below the effect levels for NO_2.

High deposition of particulates on plant leaves can reduce photosynthesis due to reduced light intensity and impeded diffusion. However, 5 to 20 g/m^2 of particulates on the leaf surface are the levels required to cause these impacts (Thompson, et al., 1984). The impacts of the repowered units will be negligible in comparison with the levels required to cause adverse effects to vegetation, and no impacts from particulates are expected.

8.1.3 Impacts to Soils

For soils, potential and hypothesized effects of atmospheric deposition include:

1. increased soil acidification;
2. alteration in cation exchange;
3. loss of base cations; and
4. mobilization of trace metals.

The potential sensitivity of specific soils to atmospheric inputs is related to two factors. First, the physical ability of a soil to conduct water vertically through the soil profile is important in influencing the interaction with deposition. Second, the ability of the soil to resist chemical changes, as measured in terms of pH and soil cation exchange capacity (CEC) is important in determining how a soil responds to atmospheric inputs.

The soils of the national park are generally classified as histosols or entisols. Histosols or peat soils are organic and have extremely high

buffering capacities based on CEC, base saturation, and bulk density. Therefore, they would be relatively insensitive to atmospheric inputs. The entisols are shallow sandy soils overlying limestone, such as the soils found in the pinelands. The direct connection of these soils with subsurface limestone tends to neutralize any acidic inputs. Moreover, the groundwater table is highly buffered due to the interaction with subsurface limestone formations which results in high alkalinity (as $CaCO_3$).

The relatively low sensitivity of the soils to acid inputs coupled with the extremely low ground-level concentrations of contaminants projected for the national park from facility emissions preclude any significant impact on soils.

8.1.4 Impacts to Wildlife

A wide range of physiological and ecological effects to fauna has been reported for gaseous and particulate pollutants (Newman, 1981; Newman and Schreiber, 1988). The most severe of these effects have been observed at concentrations above the secondary ambient air quality standards. Physiological and behavioral effects have been observed in experimental animals at or below these standards. No observable effects to fauna are expected at concentrations below the values reported in Table 8-6.

The major air quality risk to wildlife in the United States is from continuous exposure to pollutants above the National Ambient Air Quality Standards. This occurs in non-attainment areas, e.g., Los Angeles Basin. Risks to wildlife also may occur for wildlife living in the vicinity of an emission source which experiences frequent upset or episodic conditions that occur because of malfunctioning of equipment, unique meteorological conditions or during start-up (Newman and Schreiber, 1988). Under these conditions, chronic effects, e.g., particulate contamination or acute effects, such as injury to health, have been observed (Newman, 1981).

For impacts on wildlife, the lowest threshold values of SO_2 reported to cause physiological changes are shown in Table 8-6. These values are

Table 8-6. Examples of Reported Effects of Air Pollutants at Concentrations Below National Secondary Ambient Air Quality Standards

Pollutant	Reported Effect	Concentration ($\mu g/m^3$)	Exposure
Sulfur Dioxide	respiratory stress in guinea pigs	427 to 854	1 hour
	respiratory stress in rats	267	7 hours/day; 5 day/week for 10 weeks
	decreased abundance in deer mice	13-157	continually for 5 months
Particulates	respiratory stress, reduced respiratory disease defenses	120 PbO_3	continually for 2 months
	decreased respiratory disease defenses in rats, same with hamsters	100 $NiCl_2$	2 hours

Source: Newman and Schreiber, 1988.

several orders of magnitude larger than predicted concentrations due to the repowering project, and below total SO_2 concentrations predicted for the Class I area. No significant effects on terrestrial wildlife AQRVs from SO_2 are expected.

Reported threshold effects in animals for NO_x for the 3- and 24-hour averaging periods are 1,917 and 95 to 950 $\mu g/m^3$, respectively. These values are also several orders of magnitude higher than predicted impacts due to the planned facility. No effects on wildlife AQRVs from NO_x are expected due to the operation of the repowered units.

8.2 IMPACTS TO VISIBILITY

The Clean Air Act Amendments of 1977 provide for implementation of guidelines to prevent visibility impairment in mandatory Class I areas. The guidelines are intended to protect the aesthetic quality of these pristine areas from reduction in visual range and atmospheric discoloration due to various pollutants. Sources of air pollution can cause visible plumes if emissions of particulate matter (PM) and nitrogen oxides (NO_x) are sufficiently large. A plume will be visible if its constituents scatter or absorb sufficient light so that the plume is brighter or darker than its viewing background (e.g., the sky or a terrain feature, such as a mountain). PSD Class I areas, such as national parks and wilderness areas, are afforded special visibility protection designed to prevent plume visual impacts to observers within a Class I area.

The analysis to determine the potential adverse plume visibility effects was based on using the screening approach suggested in the Workbook for Plume Visual Impact Screening and Analysis (EPA, 1988c), which has been computerized by EPA in a program called the VISCREEN model. The VISCREEN model is currently recommended for use by the EPA to assess visual plume impacts in regulatory applications. The VISCREEN model can be used to calculate potential plume impact of specific pollutant emissions for specific transport and meteorological dispersion conditions. The model can be applied in two successive levels of screening (i.e., referred to as

Levels 1 and 2) without the need for extensive source, meteorological, or pollutant input. If the screening calculations using the VISCREEN model demonstrate that during worst-case meteorological conditions a plume is imperceptible or, if perceptible, is not likely to be considered objectionable (i.e., "adverse" or "significant" in the language of the EPA PSD and visibility regulations), further analysis of plume visual impact would not be required as part of the air quality review of the source. However, if the screening analyses demonstrate that the criteria are exceeded, plume visual impacts cannot be ruled out, and more detailed analyses to ascertain the magnitude, frequency, location, and timing of plume visual impacts would be required.

The Level 1 screening analysis is designed to provide a conservative estimate of plume visual impacts (i.e., impacts that would be larger than those calculated with more realistic input and modeling assumptions). This analysis assumes worst-case meteorological conditions of stable stability (Pasquill-Gifford stability class F) and a 1 m/s windspeed persisting for 12 hours in one direction towards a PSD Class I area. The input required for the Level 1 analysis is limited to the parameters:

1. Emission rates of PM and NO_x;
2. Distance between the emission source and (a) the observer; (b) the closest Class I area boundary; and (c) the most distant Class I area boundary;
3. Background visual range appropriate for the region in which the Class I area is located; and
4. If available, emission rates of NO_2, soot, and primary sulfate.

Visibility impacts are then determined for two parameters:

1. Contrast of a plume against a viewing background such as the sky or a terrain feature, and
2. Perceptibility of a plume on the basis of the color difference between the plume and the viewing background (Delta E).

Results are provided by the model for several scenarios based on the background view, the viewing angle, visibility improvement due to plumes located both inside and outside the Class I area, and the sun angle. The critical value for contrast is 0.05 while that for Delta E is 2.00. If these levels are not exceeded by the proposed source, the source passes the Level-1 visibility analysis, and the source will not have a significant impact on the Class I area.

Input parameters and results of the Level 1 analysis for the proposed Lauderdale units are presented in Figure 8-1. As shown, the Lauderdale units will limit particulates, NO_x, and primary SO_4 (sulfuric acid mist). Emission rates are the same as presented in Tables 2-2 and 3-3. Primary NO_2 and soot are not emitted in significant quantities by oil- and gas-fired combustion sources; therefore, these emissions were set to zero.

The background visual range as determined for southeast Florida from the Workbook manual is 40 km. Other parameters input to the model were based upon default values given in the Workbook and incorporated into the computer model.

As shown in Figure 8-1, based on the worst-case meteorological conditions designed to produce conservatively high impacts, the proposed emissions from the modification units are calculated to exceed the Level 1 visibility screening criteria at the Class I area. Because the Level 1 screening analysis exceed the visibility criteria, a Level 2 screening analysis was performed which uses more realistic input, representative of the source and Class I area. The most important potential difference in input between the Level 1 and Level 2 analyses is the meteorology assumed for plume transport and dispersion patterns. Although the Level 1 analysis assumes stable stability and a 1 m/s windspeed persisting for 12 hours towards a Class I area, the meteorological data in the Level 2 analysis may be different because it accounts for realistic persistence of stability and windspeed conditions towards the Class I area.

Lauderdale Repowering Project

FPL

The Level 2 screening analysis is designed to account for more realistic occurrences of meteorological conditions that would transport the proposed units' plumes towards the Class I area. In this analysis, an assessment of the frequency of the wind direction, windspeed, and stability classes are made to determine the frequency of conditions that are most likely to cause a potentially adverse plume visual impact. If the Level 1 default parameters are selected for addressing visual plume impacts, the VISCREEN model assigns an appropriate estimate of particle size and density for the emitted and background atmosphere particulate and worst-case plume dispersion conditions. For this analysis, the particle size and density for the emission sources were not changed.

The terrain between the project site and the PSD Class I area can be considered as generally flat. Therefore, the first step in the analysis is to construct a table that shows worst-case dispersion conditions ranked in order of decreasing severity and the frequency of occurrence of these conditions associated with the wind direction that could transport emissions toward the Class I area. Dispersion conditions are ranked by evaluating the product of sigma z times the windspeed, where sigma z is the vertical dispersion coefficient for the given stability class and downwind distance and the windspeed is the windspeed for the given windspeed category in the joint frequency table. The dispersion conditions are then ranked in ascending order of the value of sigma z times the windspeed.

For the Level 2 analysis, it is assumed that steady-state plume conditions are unlikely to persist for more than 12 hours. Thus, if a transit time of more than 12 hours is required to transport a plume parcel from the emission source to a Class I area for a given dispersion condition, it is assumed that the plume material is more dispersed than a standard Gaussian plume model would predict. This enhanced dilution would result from daytime convective mixing and wind direction and speed changes.

To obtain the worst-case meteorological conditions, it is necessary to determine the dispersion conditions (i.e., a given windspeed and stability

class associated with the wind direction that would transport emissions toward the Class I area) that has a sigma z times windspeed product with a cumulative probability of 1 percent. Thus, the dispersion condition is selected to address potential plume visual impacts such that the sum of all frequencies of occurrence worse than this condition totals 1 percent (i.e., about 4 days per year). The 1-percentile meteorology is assumed to be worst-case plume visual impacts when the probability of worst-case meteorology conditions is coupled with the probability of other factors being ideal for maximizing plume visual impacts. Dispersion conditions associated with transport times of more than 12 hours are not considered in this cumulative frequency.

For this study, the meteorological data from the National Weather Service (NWS) station in Miami were used to generate a frequency distribution of wind direction, windspeed, and stability occurrences based on the standardized stability array (STAR) program used for many air dispersion model applications. The STAR program generates frequencies using 16 wind direction classes with each class covering a 22.5 degree sector, 6 windspeed classes, and 6 stability classes.

The PSD Class I area of the Everglades National Park is located to the west-southwest through south-southwest of the Lauderdale facility at distances that vary from approximately 59 km to more than 75 km in directions from south-southwest through west-southwest. Therefore, the frequencies associated with 3 wind directions were included in the analysis (i.e., north-northeast, northeast, east-northeast) with the highest frequency from any of those directions used in the cumulative frequency to determine the worst-case meteorology. This analysis is presented in Table 8-2, which shows the dispersion condition (i.e., product of sigma z times the windspeed), transport time to the nearest part of the Class I area (i.e., distance of 59 km), and the frequency associated with each wind direction. As indicated in Table 8-7, the first two dispersion conditions would produce the maximum visual plume impacts because the dispersion conditions produce the lowest product of sigma z times the windspeed.

Table 8-7. Screening Level 2 Plume Visual Impact Analysis Identification of Worst-Case Meteorological Conditions

Dispersion Condition					Frequency of Occurrence of Dispersion Condition for Wind Directions			Frequency (f) and Cumulative Frequency (cf) Analysis	
Stability[a]	Windspeed (m/s)	Sigma Z (m)	Sigma Z x Windspeed (m^2/s)	Transport Time to Class I Area[b] (hours)	NNE	NE	ENE	(cf)	(cf)
F	0.8	79.2	83.4	35[c]	0.0034	0.0027	0.0030	0	0
E	0.8	152	122	35[c]	0	0	0	0	0
F	2.6	79.2	206	11	.0052	0.0050	0.0075	0.0075	0.0075
F	4.4	79.2	348	6	0	0	0	0	0
E	2.6	152	395	11	0.0044	0.0039	0.0061	0.0061	0.0136

[a]Stability E and F correspond to slightly and moderately stable stabilities, respectively.
[b]Assumed to be located approximately 59 km to the south-southwest clockwise through west-southwest.
[c]Transport time to Class I area during this condition is longer than 12 hours so the frequency for this condition is not added to the cumulative frequency summation.

However, the transport time from the emission source to the Class I area associated with each of these conditions is greater than 12 hours. With the third condition (i.e., F stability and 2.6 m/s wind) and subsequent conditions, emissions could be transported to the Class I area in less than 12 hours. The frequencies of these conditions, using the maximum frequency from one of the 3 directions, are added to the cumulative frequency. This is appropriate since the concern is with the number of days during which, at any time, dispersion conditions are worse than or equal to a given value. For this study, two conditions produce a cumulative frequency of 1 percent or more: F stability with windspeed of 2.6 m/s and E stability with windspeed of 2.6 m/s (F stability and a 4.4 m/s windspeed did not occur). The result of this analysis indicates that the dispersion condition of E stability and windspeed of 2.6 m/s is associated with a cumulative frequency of 1 percent and used to assess the potential visual plume impacts from the proposed units.

The results of the visual plume impact analysis using a worst-case meteorological condition of E stability and 2.6 m/s windspeed are shown in Figure 8-2. All values of Delta E and contrast are less than the screening criteria of 2.00 and 0.05, respectively. As a result, it is highly unlikely that emissions from the proposed Lauderdale units will cause adverse visibility impairment in the Everglades National Park. Since this analysis was performed with worst case emissions (i.e., oil firing), visibility impairment using the preferred fuel (natural gas) will be even more unlikely. No significant impacts are predicted, and further analysis of visibility impairment is unnecessary.

8.3 IMPACTS DUE TO ASSOCIATED GROWTH

Air quality impacts due to general commercial, residential, industrial and other growth associated with the Lauderdale Repowering Project would potentially occur during the construction and operational phases. Construction activities and employment will generate relatively small quantities of air pollutants that can affect air quality. Fugitive particulate matter from construction activities will be controlled by water

Lauderdale Repowering Project

FPL

spraying. The emissions from construction will be minor, since major earthworks are not planned. Construction employment is expected to be about 800 people over the construction period. Travel to and from the site would generate some automotive pollutants, i.e., CO and NO_x. Indirect employment, based on multiplier effects, could reach about 16,500, of which about a third would be in Broward County and half in southeast Florida. The remainder would be out-of-state due to the nature of manufacturing. This employment is expected to be filled by existing construction and manufacturing workers that would supply the materials necessary for the plant. The impact of this growth is insignificant relative to the existing population base in the area.

Operational employment would be about 28 personnel added to the current plant staff of 157. Indirect employment is estimated to be about 2,700, of which a majority would be located in southeast Florida. The additional employment is expected to originate primarily from the general population growth in the area, which would not be a direct result of the project. Indeed, the purpose of the project is to provide additional generation of electrical power in the FPL system's load center, i.e., southeast Florida. The repowered facility, which in part replaces a less efficient steam cycle plant, will emit less pollutants per MW generated than the existing facility. Overall, this efficiency, coupled with the use of existing infrastructure provided at the site, results in substantially lower air quality effects than other comparable projects.

9.0 NONATTAINMENT

Conditions of site certification and accompanying FDER permit are requested that would limit the potential VOC emissions from both the existing plant and the repowered units. The limitations on the existing plant would limit potential VOC emissions of the existing plant to 99.9 tons per year (TPY) and the plant would be a minor source of VOCs. The GTs would be limited to 90.9 TPY based on maximum allowable heat input rates presented in Table 2-13; the remaining VOC emissions, i.e., 9 TPY, would potentially be emitted from the storage tanks. The existing Units 4 and 5 would be limited by their permanent shutdown. The condition of certification and accompanying FDER permit for the existing plant is requested to take effect as of the permanent shutdown of Units 4 and 5. This action would establish the Lauderdale Plant as a minor source of VOCs.

A condition of certification is requested to limit the potential VOC emissions of the repowered units and the associated storage tank minus the creditable emission decreases to 99.9 TPY. The VOC emissions from the repowered units would be limited to 111.9 TPY based on the maximum allowable heat input rates presented in Table 2-7. VOC emissions from the storage tank would be limited to 4.3 TPY including creditable emission decreases for removing one tank and converting another to No. 2 fuel oil. The creditable emissions decreases for shutting down Units 4 and 5 are 16.3 TPY. By limiting the VOC emissions associated with the Lauderdale Repowering Project to 99.9 TPY, the nonattainment provisions in Rule 17-2.510, F.A.C. do not apply.

[a] Boilers can be approximately classified according to their gross (higher) heat rate as shown below:
Utility (power plant) boilers: $>106 \times 10^9$ J/hr (>100 x 10^6 Btu/hr)
Industrial boilers: 10.6×10^9 to 106×10^9 J/hr (10 x 10^6 to 100 x 10^6 Btu/hr)
Commercial boilers: 0.5×10^9 to 10.6×10^9 J/hr (0.5 x 10^6 to 10 x 10^6 Btu/hr)
Residential furnaces: $<0.5 \times 10^9$ J/hr (<0.5 x 10^6 Btu/hr)

[b] References 3-7 and 24-25. Particulate matter is defined in this section as that material collected by EPA Method 5 (front half catch).

[c] References 1-5. S indicates that the weight % of sulfur in the oil should be multiplied by the value given.

[d] References 3-5 and 8-10. Carbon monoxide emissions may increase by factors of 10 to 100 if the unit is improperly operated or not well maintained.

[e] Expressed as NO_2. References 1-5, 8-11, 17 and 26. Test results indicate that at least 95% by weight of NO_x is NO for all boiler types except residential furnaces, where about 75% is NO.

[f] References 18-21. Volatile organic compound emissions are generally negligible unless boiler is improperly operated or not well maintained, in which case emissions may increase by several orders of magnitude.

[g] Particulate emission factors for residual oil combustion are, on average, a function of fuel oil grade and sulfur content:
Grade 6 oil: $1.25(S) + 0.38$ kg/10^3 liter [$10(S) + 3$ lb/10^3 gal] where S is the weight % of sulfur in the oil. This relationship is based on 81 individual tests and has a correlation coefficient of 0.65.
Grade 5 oil: 1.25 kg/10^3 liter (10 lb/10^3 gal)
Grade 4 oil: 0.88 kg/10^3 liter (7 lb/10^3 gal)

[h] Reference 25.

[i] Use 5 kg/10^3 liters (42 lb/10^3 gal) for tangentially fired boilers, 12.6 kg/10^3 liters (105 lb/10^3gal) for vertical fired boilers, and 8.0 kg/10^3 liters (67 lb/10^3 gal) for all others, at full load and normal (>15%) excess air. Several combustion modifications can be employed for NO_x reduction: (1) limited excess air can reduce NO_x emissions 5-20%, (2) staged combustion 20-40%, (3) using low NO_x burners 20-50%, and (4) ammonia injection can reduce NO_x emissions 40-70% but may increase emissions of ammonia. Combinations of these modifications have been employed for further reductions in certain boilers. See Reference 23 for a discussion of these and other NO_x reducing techniques and their operational and environmental impacts.

[j] Nitrogen oxides emissions from residual oil combustion in industrial and commercial boilers are strongly related to fuel nitrogen content, estimated more accurately by the empirical relationship:
kg $NO_2/10^3$ liters $= 2.75 + 50(N)^2$ [lb $NO_2/10^3$gal $= 22 + 400(N)^2$] where N is the weight % of nitrogen in the oil. For residual oils having high (>0.5 weight %) nitrogen content, use 15 kg $NO_2/10^3$ liter (120 lb $NO_2/10^3$gal) as an emission factor.

[b]References 15-18.
[c]Reference 4. Based on avg. sulfur content of natural gas, 4600 $g/10^6$ Nm^3 (2000 $gr/10^6$ scf).
[d]References 4-5, 7-8, 11, 14, 18-19, 21.
[e]Expressed as NO_2. Tests indicate about 95 weight % NO_x is NO_2.
[f]References 4, 7-8, 16, 18, 22-25.
[g]References 16, 18. May increase 10 - 100 times with improper operation or maintenance.
[h]For tangentially fired units, use 4400 $kg/10^6$ m^3 (275 $lb/10^6$ ft^3). At reduced loads, multiply factor by load reduction coefficient in Figure 1.4-1. For potential NO_x reductions by combustion modification, see text. Note that NO_x reduction from these modifications will also occur at reduced load conditions.

The combined loss from filling and emptying is called working loss. Filling loss comes with an increase of the liquid level in the tank, when the pressure inside the tank exceeds the relief pressure and vapors are expelled from the tank. Emptying loss occurs when air drawn into the tank during liquid removal becomes saturated with organic vapor and expands, thus exceeding the capacity of the vapor space.

The following equations, provided to estimate emissions, are applicable to tanks with vertical cylindrical shells and fixed roofs. These tanks must be substantially liquid and vapor tight and must operate approximately at atmospheric pressure. Fixed roof tank breathing losses can be estimated from[2]:

$$L_B = 2.26 \times 10^{-2} M_V \left(\frac{P}{P_A - P} \right)^{0.68} D^{1.73} H^{0.51} \Delta T^{0.50} F_P C K_C \qquad (1)$$

where:

L_B = fixed roof breathing loss (lb/yr)

M_V = molecular weight of vapor in storage tank (lb/lb mole), see Note 1

P_A = average atmospheric pressure at tank location (psia)

P = true vapor pressure at bulk liquid conditions (psia), see Note 2

D = tank diameter (ft)

H = average vapor space height, including roof volume correction (ft), see Note 3

ΔT = average ambient diurnal temperature change (°F)

F_P = paint factor (dimensionless), see Table 4.3-1

C = adjustment factor for small diameter tanks (dimensionless), see Figure 4.3-4

K_C = product factor (dimensionless), see Note 4

Notes: (1) The molecular weight of the vapor, M_V, can be determined by Table 4.3-2 for selected petroleum liquids and volatile organic liquids or by analysis of vapor samples. Where mixtures of organic liquids are stored in a tank, M_V can be estimated from the liquid composition. As an example of the latter calculation, consider a liquid known to be composed of components A and B with mole fractions in the liquid X_a and X_b, respectively. Given the vapor pressures of the pure

[a] References 3-4.
[b] For a more comprehensive listing of volatile organic liquids, see Reference 3.
[c] RVP = Reid vapor pressure in psia.

components, P_a and P_b, and the molecular weights of the pure components, M_a and M_b, M_V is calculated:

$$M_V = M_a \left(\frac{P_a X_a}{P_t} \right) + M_b \left(\frac{P_b X_b}{P_t} \right)$$

where: P_t, by Raoult's law, is:

$$P_t = P_a X_a + P_b X_b$$

(2) True vapor pressures for organic liquids can be determined from Figures 4.3-5 or 4.3-6, or Table 4.3-2. In order to use Figures 4.3-5 or 4.3-6, the stored liquid temperature, T_S, must be determined in degrees Fahrenheit. T_S is determined from Table 4.3-3, given the average annual ambient temperature, T_A, in degrees Fahrenheit. True vapor pressure is the equilibrium partial pressure exerted by a volatile organic liquid, as defined by ASTM-D-2879 or as obtained from standard reference texts. Reid vapor pressure is the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids, except liquified petroleum gases, as determined by ASTM-D-323.

(3) The vapor space in a cone roof is equal in volume to a cylinder, which has the same base diameter as the cone and is one third the height of the cone. If information is not available, assume H equals one half tank height.

(4) For crude oil, $K_C = 0.65$. For all other organic liquids, $K_C = 1.0$.

Fixed roof tank working losses can be estimated from[2]:

$$L_W = 2.40 \times 10^{-5} M_V P V N K_N K_C \qquad (2)$$

where:

L_W = fixed roof working loss (lb/year)

M_V = molecular weight of vapor in storage tank (lb/lb mole), see Note 1 to Equation 1

P = true vapor pressure at bulk liquid temperature (psia), see Note 2 to Equation 1

V = tank capacity (gal)

N = number of turnovers per year (dimensionless)

$$N = \frac{\text{Total throughput per year (gal)}}{\text{Tank capacity, V (gal)}}$$

K_N = turnover factor (dimensionless), see Figure 4.3-7

K_C = product factor (dimensionless), see Note 1

Note: (1) For crude oil, $K_C = 0.84$. For all other organic liquids, $K_C = 1.0$.

TABLE 4.3-3. AVERAGE STORAGE TEMPERATURE (T_S) AS A FUNCTION OF TANK PAINT COLOR[a]

Tank color	Average storage temperature, T_S
White	T_A[b] + 0
Aluminum	T_A + 2.5
Gray	T_A + 3.5
Black	T_A + 5.0

[a] Reference 5.
[b] T_A is the average annual ambient temperature in degrees Fahrenheit.

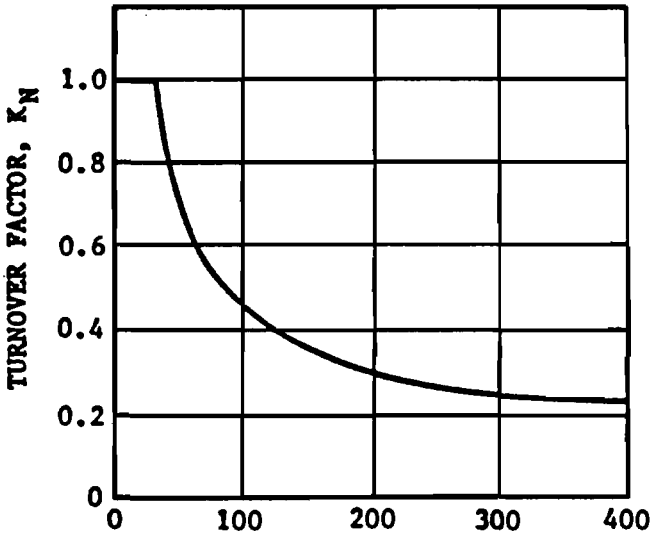

Figure 4.3-7. Turnover factor (K_N) for fixed roof tanks.

Health Impacts, Emissions, and Emission Factors for Noncriteria Pollutants Subject to De Minimis Guidelines and Emitted from Stationary Conventional Combustion Processes

TABLE 4-3 TRACE ELEMENT EMISSION FACTORS FOR OIL-FIRED AND GAS-FIRED UTILITY AND INDUSTRIAL BOILERS

FURNACE TYPE	RESIDUAL OIL[a] pg/J			NATURAL GAS[b] pg/J		
	Hg	Be	F	Hg	Be	F
UNCONTROLLED[c]						
Tangential firing	23C	24C	23C	4.9	Nil	Nil
Wall firing	23C	24C	23C	4.9	Nil	Nil

(a) Emission factors for residual oil are calculated based on characterization of eleven residual oil samples and the assumption that all trace elements in the oil feed are emitted through the stack (Shih, et al, October 1979). C indicates the concentration of trace element in residual oil, in ppm.

(b) Based on stack test measurements for gas-fired utility boilers (1.).

(c) When boilers are equipped with wet scrubbers (used for flue gas desulfurization), the emission factor for Be may be assumed to be 0.01 times the uncontrolled factor given above, and emissions of Hg and F are .2 times the values given above (1.).

NOTE: To convert emission factor units to LB/10^{12}BTU, multiply factors by 2.33.

APPENDIX C

VOC EMISSION CALCULATIONS

VOC EMISSION ESTIMATES FOR GAS TURBINES 1-24

Emission estimates for VOCs from gas turbines contained in EPA Air Pollutant Emission Factors ,i.e., AP-42 are for unburned hydrocarbons. Investigations into the possible VOC emissions for the type of gas turbine unit at the Lauderdale Plant were unsuccessful in determining the amount of unreactive hydrocarbons, i.e., methane and ethane, that may be in the amount of unburned hydrocarbons. As a result, source testing which excluded these nonreactive hydrocarbons was performed as allowed by FDER Rule 17-2.100(223) F.A.C. The results of these tests are presented in the following report.

The emissions from the tests were evaluated statistically to determine an upper limit that would be applicable to all 24 gas turbines. The results of this evaluation indicated an upper bound for the emissions as follows:

Natural Gas - 0.0034 lb VOC per million Btu heat input
No. 2 Fuel Oil - 0.0013 lb VOC per million Btu heat input

The natural gas emission factor reflects an upper confidence limit of 95 percent. This confidence limit was chosen to account the generally higher VOC emissions on natural gas relative to fuel oil and the greater operating usage on natural gas. In addition, natural gas can contain minute quantities of ethylene, propane, butane and, hexane and higher molecular weight gases that are considered VOCs. The fuel oil emission factor was based on a 90 percent confidence limit. All statistics were based on the t distribution.

1.0 INTRODUCTION

A study of non-methane/ethane emissions of Volatile Organic Compounds (VOC) was performed at the Florida Power and Light's Lauderdale Power Plant. Testing was performed on November 8 and 10, 1989. This study of gas turbine emissions supplements a previous test report of August-September 1989, in which emissions of total VOC's and non-methane organics were quantified.

A Byron 301 mon-methane VOC analyzer with a flame ionization detector (FID) was utilized for testing. The gas chromatograph column temperature and carrier flow were raised above the normal settings to enable seperation of both methane and ethane from the remainder of the volatile organics. A more detailed description of the technique is provided in Section 5.0.

Emissions from the two units were monitored during both natural gas and distillate fuel firing.

2.0 SUMMARY AND DISCUSSION OF RESULTS

Results of the testing are summarized in Table 1. Complete emission results and strip chart records are provided in Appendix B.

Table 1 Emission Summary
Florida Power and Light Company
Ft. Lauderdale Power Plant
November 8 and 10, 1989

Date	Fuel	Load MW	C_3H_8 ppm	O_2 %	Fuel Factor	Emission Rate* lb/MMBTU Carbon
Unit 8						
11/8/89	Natural gas	32.5	0.41	16.82	8710	0.0017
11/8/89	Distillate	32.5	0.20	16.51	9190	0.0008
Unit 23						
11/10/89	Distillate	33.0	0.46	16.90	8710	0.0020
11/10/89	Oil	32.5	0.11	16.75	9190	0.0005

* $E = (\text{ppm } C_3H_8)\ (2.595 \times 10^{-9})\ (\text{Fuel Factor}) \left(\frac{20.9}{20.9 - \%O_2}\right) (36)$

Where 36 = molecular weight of carbon in C_3H_8

3.0 PROCESS DESCRIPTION AND OPERATION

Each of the 24 gas turbine generators is fired with two Rolls-Royce engines. The exhaust from each engine is expanded through a common turbine generator.

4.0 SAMPLING POINT LOCATION

Because the exhaust stack is filled with baffling material for noise control, there is no place to measure volumetric flows.

All samples were taken from a tee to the "combustibles analyzer" sample line provided for each unit.

5.0 FIELD AND ANALYTICAL PROCEDURES

The Byron 301 utilizes a Chromosorb 106 column to seperate methane from the remainder of VOC compounds. Since the constituents of natural gas are mainly methane and ethane, it is desireable to modify the analyzer to allow for the additional seperation of ethane, which, along with methane, is excluded from the VOC list by statute. During normal operation, the 301 column temperature is maintained at 50°C at a flame air pressure of 16 psi and a carrier pressure of 13 psi. To enable the column to seperate ethane as well as methane from the total, it was necessary to raise the column temperature to 71°C and to raise the flame air and carrier pressures to 31 and 29 psi, respectively.

The 301 analyzer operates on three minute cycles. A sample is continuously withdrawn from the stack and passes through a sample loop. Every three minutes the contents of the sample loop are injected into the G/C column. After a few seconds the methane, and in this case ethane, are passed through the column and into the FID. After approximately one minute, the analysis "window" is closed and the column is back flushed to pass the remainder of the VOC contents into the FID. Approximately two minutes is allowed for this analysis. To demonstrate performance of the analyzer, calibration gases of ≈25 ppm CH_4, ≈25 ppm C_2H_6, and three protocol 1 gases of C_3H_8 (3, 5, and 8.3 ppm C_3H_8/air) were utilized. It was demonstrated that the C_2H_6 was totally evolved during the normal methane analysis "window" after changing column operating parameters as previously mentioned.

The only complication to the testing arose from the fact that the new column operating parameters allowed the evolution of some very heavy organics that had previously been trapped in the column over its lifetime. This "background" was very constant, however, and was demonstrated by use of zero air response. Calibrations were made over this 0.5 ppm C_3H_8 response and almost perfect linearity was demonstrated.

SECTION I: STATEMENTS BY APPLICANT AND ENGINEER

A. APPLICANT

I am the undersigned owner or authorized representative* of _____

I certify that the statements made in this application for a _____ permit are true, correct and complete to the best of my knowledge and belief. Further, I agree to maintain and operate the pollution control source and pollution control facilities in such a manner as to comply with the provision of Chapter 403, Florida Statutes, and all the rules and regulations of the department and revisions thereof. I also understand that a permit, if granted by the department, will be non-transferable and I will promptly notify the department upon sale or legal transfer of the permitted establishment.

*Attach letter of authorization

Signed: _____

_____
Name and Title (Please Type)

Date: _____ Telephone No. _____

B. PROFESSIONAL ENGINEER REGISTERED IN FLORIDA (where required by Chapter 471, F.S.)

This is to certify that the engineering features of this pollution control project have been designed/examined by me and found to be in conformity with modern engineering principles applicable to the treatment and disposal of pollutants characterized in the permit application. There is reasonable assurance, in my professional judgment, that

[1] See Florida Administrative Code Rule 17-2.100(57) and (104)

the pollution control facilities, when properly maintained and operated, will discharge an effluent that complies with all applicable statutes of the State of Florida and the rules and regulations of the department. It is also agreed that the undersigned will furnish, if authorized by the owner, the applicant a set of instructions for the proper maintenance and operation of the pollution control facilities and, if applicable, pollution sources.

SECTION II: GENERAL PROJECT INFORMATION

A. Describe the nature and extent of the project. Refer to pollution control equipment, and expected improvements in source performance as a result of installation. State whether the project will result in full compliance. Attach additional sheet if necessary.

Refer to Sections 2.1 and 2.2

B. Schedule of project covered in this application (Construction Permit Application Only)

Start of Construction March 1, 1991 Completion of Construction 1993

C. Costs of pollution control system(s): (Note: Show breakdown of estimated costs only for individual components/units of the project serving pollution control purposes. Information on actual costs shall be furnished with the application for operation permit.)

Refer to Section 4.3.1

D. Indicate any previous DER permits, orders and notices associated with the emission point, including permit issuance and expiration dates.

See Table 2.1-1 and Appendix 10.4 in SCA

Note: Reference to sections are made to Air Permit Application report unless otherwise noted.

E. Requested permitted equipment operating time: hrs/day_____; days/wk_____; wks/yr_____;

if power plant, hrs/yr_____; if seasonal, describe:_____

See Section 2.3 and Table 2-7

F. If this is a new source or major modification, answer the following questions. (Yes or No)

1. Is this source in a non-attainment area for a particular pollutant? Yes

   a. If yes, has "offset" been applied? No

   b. If yes, has "Lowest Achievable Emission Rate" been applied? No

   c. If yes, list non-attainment pollutants. Volatile Organic Compounds

2. Does best available control technology (BACT) apply to this source? If yes, see Section VI. Yes

3. Does the State "Prevention of Significant Deterioriation" (PSD) requirement apply to this source? If yes, see Sections VI and VII. Yes

4. Do "Standards of Performance for New Stationary Sources" (NSPS) apply to this source? Yes

5. Do "National Emission Standards for Hazardous Air Pollutants" (NESHAP) apply to this source? No

H. Do "Reasonably Available Control Technology" (RACT) requirements apply to this source? No

   a. If yes, for what pollutants?_____

   b. If yes, in addition to the information required in this form, any information requested in Rule 17-2.650 must be submitted.

Attach all supportive information related to any answer of "Yes". Attach any juatification for any answer of "No" that might be considered questionable.

See Section 3.0

SECTION III: AIR POLLUTION SOURCES & CONTROL DEVICES (Other than Incinerators)

A. Raw Materials and Chemicals Used in your Process, if applicable: Not Applicable

Description	Contaminants		Utilization Rate - lbs/hr	Relate to Flow Diagram
	Type	% Wt		

B. Process Rate, if applicable: (See Section V, Item 1)

1. Total Process Input Rate (lbs/hr): _____

2. Product Weight (lbs/hr): _____

C. Airborne Contaminants Emitted: (Information in this table must be submitted for each emission point, use additional sheets as necessary)

See Table 2-6 and Figure 2-1

Name of Contaminant	Emission[1]		Allowed[2] Emission Rate per Rule 17-2	Allowable[3] Emission lbs/hr	Potential[4] Emission		Relate to Flow Diagram
	Maximum lbs/hr	Actual T/yr			lbs/hr	T/yr	

[1]See Section V, Item 2.

[2]Reference applicable emission standards and units (e.g. Rule 17-2.600(5)(b)2. Table II, E. (1) - 0.1 pounds per million BTU heat input)

[3]Calculated from operating rate and applicable standard.

[4]Emission, if source operated without control (See Section V, Item 3).

D. Control Devices: (See Section V, Item 4) See Section 4.0

Name and Type (Model & Serial No.)	Contaminant	Efficiency	Range of Particles Size Collected (in microns) (If applicable)	Basis for Efficiency (Section V Item 5)

E. Fuels See Table 2-1 and Tables A-1 through A-8

Type (Be Specific)	Consumption*		Maximum Heat Input (MMBTU/hr)
	avg/hr	max./hr	

*Units: Natural Gas--MMCF/hr; Fuel Oils--gallons/hr; Coal, wood, refuse, other--lbs/hr.

Fuel Analysis: See Tables 2-8 and 2-9

Percent Sulfur: _____ Percent Ash: _____

Density: _____ lbs/gal Typical Percent Nitrogen: _____

Heat Capacity: _____ BTU/lb _____ BTU/gal

Other Fuel Contaminants (which may cause air pollution): _____

_____

F. If applicable, indicate the percent of fuel used for space heating.

Annual Average _____ Maximum _____

G. Indicate liquid or solid wastes generated and method of disposal.

_____

_____

_____

_____

H. Emission Stack Geometry and Flow Characteristics (Provide data for each stack):
See Table 2-1

Stack Height: _____ ft. Stack Diameter: _____ ft.

Gas Flow Rate: _____ ACFM _____ DSCFM Gas Exit Temperature: _____ °F.

Water Vapor Content: _____ % Velocity: _____ FPS

SECTION IV: INCINERATOR INFORMATION Not Applicable

Type of Waste	Type 0 (Plastics)	Type I (Rubbish)	Type II (Refuse)	Type III (Garbage)	Type IV (Pathological)	Type V (Liq.& Gas By-prod.)	Type VI (Solid By-prod.)
Actual lb/hr Incinerated							
Uncontrolled (lbs/hr)							

Description of Waste _____

Total Weight Incinerated (lbs/hr) _____ Design Capacity (lbs/hr) _____

Approximate Number of Hours of Operation per day _____ day/wk _____ wks/yr. _____

Manufacturer _____

Date Constructed _____ Model No. _____

	Volume $(ft)^3$	Heat Release (BTU/hr)	Fuel		Temperature (°F)
			Type	BTU/hr	
Primery Chamber					
Secondary Chamber					

Stack Height: _____ ft. Stack Diamter: _____ Stack Temp. _____

Gas Flow Rate: _____ ACFM _____ DSCFM* Velocity: _____ FPS

*If 50 or more tons per day design capacity, submit the emissions rate in grains per standard cubic foot dry gas corrected to 50% excess air.

Type of pollution control device: [ ] Cyclone [ ] Wet Scrubber [ ] Afterburner

[ ] Other (specify) _____

Brief description of operating characteristics of control devices: _____

_____

_____

_____

_____

Ultimate disposel of any effluent other than that emitted from the stack (scrubber water, ash, etc.):

_____

_____

_____

_____

NOTE: Items 2, 3, 4, 6, 7, 8, and 10 in Section V must be included where applicable.

SECTION V: SUPPLEMENTAL REQUIREMENTS

Please provide the following supplements where required for this application.

1. Total process input rate and product weight -- show derivation [Rule 17-2.100(127)]

2. To a construction application, attach basis of emission estimate (e.g., design calculations, design drawings, pertinent manufacturer's test data, etc.) and attach proposed methods (e.g., FR Part 60 Methods 1, 2, 3, 4, 5) to show proof of compliance with applicable standards. To an operation application, attach test results or methods used to show proof of compliance. Information provided when applying for an operation permit from a construction permit shall be indicative of the time at which the test was made. See Tables A-1 through A-8

3. Attach basis of potential discharge (e.g., emission factor, that is, AP42 test).
   See Tables A-1 through A-8
4. With construction permit application, include design details for all air pollution control systems (e.g., for baghouse include cloth to air ratio; for scrubber include cross-section sketch, design pressure drop, etc.)
   See Tables A-1 and A-4 for wet injection rates
5. With construction permit application, attach derivation of control device(s) efficiency. Include test or design data. Items 2, 3 and 5 should be consistent: actual emissions = potential (1-efficiency).
   See Tables A-1, A-2, A-4 and A-5
6. An 8 1/2" x 11" flow diagram which will, without revealing trade secrets, identify the individual operations and/or processes. Indicate where raw materials enter, where solid and liquid waste exit, where gaseous emissions and/or airborne particles are evolved and where finished products are obtained.
   See Figure 2-1
7. An 8 1/2" x 11" plot plan showing the location of the establishment, and points of airborne emissions, in relation to the surrounding area, residences and other permanent structures and roadways (Example: Copy of relevant portion of USGS topographic map).
   See Figure 1-2
8. An 8 1/2" x 11" plot plan of facility showing the location of manufacturing processes and outlets for airborne emissions. Relate all flows to the flow diagram.
   See Figure 2-3

9. The appropriate application fee in accordance with Rule 17-4.05. The check should be made payable to the Department of Environmental Regulation. Not Applicable

10. With an application for operation permit, attach a Certificate of Completion of Construction indicating that the source was constructed as shown in the construction permit.

SECTION VI: BEST AVAILABLE CONTROL TECHNOLOGY

A. Are standards of performance for new stationary sources pursuant to 40 C.F.R. Part 60 applicable to the source?

[X] Yes [ ] No

Contaminant	Rate or Concentration
See Section 4.2 and Table 4-1	

B. Has EPA declared the best available control technology for this class of sources (If yes, attach copy)

[X] Yes [ ] No

Contaminant	Rate or Concentration
See Section 4.3 and Table 4-2	

C. What emission levels do you propose as best available control technology?

Contaminant	Rate or Concentration
See Tables A-1 through A-8	

D. Describe the existing control and treatment technology (if any). Not Applicable

1. Control Device/System:
2. Operating Principles:
3. Efficiency:*
4. Capital Costs:

*Explain method of determining

5. Useful Life:

6. Operating Costs:

7. Energy:

8. Maintenance Cost:

9. Emissions:

Contaminant	Rate or Concentration

10. Stack Parameters

a. Height: ft.

b. Diameter: ft.

c. Flow Rate: ACFM

d. Temperature: °F.

e. Velocity: FPS

E. Describe the control and treatment technology available (As many types as applicable, use additional pages if necessary). See Section 4.3

1.

a. Control Device:

b. Operating Principles:

c. Efficiency:[1]

d. Capital Cost:

e. Useful Life:

f. Operating Cost:

g. Energy:[2]

h. Maintenance Cost:

i. Availability of construction materials and process chemicals:

j. Applicability to manufacturing processes:

k. Ability to construct with control device, install in available space, and operate within proposed levels:

2.

a. Control Device:

b. Operating Principles:

c. Efficiency:[1]

d. Capital Cost:

e. Useful Life:

f. Operating Cost:

g. Energy:[2]

h. Maintenance Cost:

i. Availability of construction materials and process chemicals:

[1]Explain method of determining efficiency.
[2]Energy to be reported in units of electrical power - KWH design rate.

j. Applicability to manufacturing processes:

k. Ability to construct with control device, install in available space, and operate within proposed levels:

3.

a. Control Device:

b. Operating Principles:

c. Efficiency:[1]

d. Capital Cost:

e. Useful Life:

c. Efficiency:[1]

d. Capital Costs:

e. Useful Life:

f. Operating Cost:

g. Energy:[2]

h. Maintenance Cost:

i. Availability of construction materials and process chemicals:

j. Applicability to manufacturing processes:

k. Ability to construct with control device, install in available space, and operate within proposed levels:

F. Describe the control technology selected: See Section 4.3

1. Control Device:

2. Efficiency:[1]

3. Capital Cost:

4. Useful Life:

5. Operating Cost:

6. Energy:[2]

7. Maintenance Cost:

8. Manufacturer:

9. Other locations where employed on similar processes:

a. (1) Company:

(2) Mailing Address:

(3) City:

(4) State:

[1]Explain method of determining efficiency.
[2]Energy to be reported in units of electrical power - KWH design rate.

(5) Environmental Manager:

(6) Telephone No.:

(7) Emissions:[1]

Contaminant	Rate or Concentration

(8) Process Rate:[1]

b. (1) Company:

(2) Mailing Address:

(3) City: (4) State:

(5) Environmental Manager:

(6) Telephone No.:

(7) Emissions:[1]

Contaminant	Rate or Concentration

(8) Process Rate:[1]

10. Reason for selection and description of systems:

[1]Applicant must provide this information when available. Should this information not be available, applicant must state the reason(s) why.

SECTION VII - PREVENTION OF SIGNIFICANT DETERIORATION

A. Company Monitored Data See Section 5.0 and Appendix 10.5.1

1. _____no. sites _____ TSP _____( ) SO^{2}* _____ Wind spd/dir

Period of Monitoring ____/____/____ to ____/____/____
month day year month day year

Other data recorded _____

Attach all data or statistical summaries to this application.

*Specify bubbler (B) or continuous (C).

2. Instrumentation, Field and Laboratory

a. Was instrumentation EPA referenced or its equivalent? [ ] Yes [ ] No

b. Was instrumentation calibrated in accordance with Department procedures?

[ ] Yes [ ] No [ ] Unknown

B. Meteorological Data Used for Air Quality Modeling See Section 6.3

1. _____ Year(s) of data from ____/____/____ to ____/____/____
month day year month day year

2. Surface data obtained from (location)_____

3. Upper air (mixing height) data obtained from (location)_____

4. Stability wind rose (STAR) data obtained from (location)_____

C. Computer Models Used See Section 6.2

1. _____ Modified? If yes, attach description.

2. _____ Modified? If yes, attach description.

3. _____ Modified? If yes, attach description.

4. _____ Modified? If yes, attach description.

Attach copies of all final model runs showing input data, receptor locations, and principle output tables.

D. Applicants Maximum Allowable Emission Data See Section 6.4

Pollutant	Emission Rate
TSP	_____ grams/sec
SO^2	_____ grams/sec

E. Emission Data Used in Modeling See Section 6.4

Attach list of emission sources. Emission data required is source name, description of point source (on NEDS point number), UTM coordinates, stack data, allowable emissions, and normal operating time.

F. Attach all other information supportive to the PSD review.

G. Discuss the social and economic impact of the selected technology versus other applicable technologies (i.e., jobs, payroll, production, taxes, energy, etc.). Include assessment of the environmental impact of the sources. See Section 4.3

H. Attach scientific, engineering, and technical material, reports, publications, journals, and other competent relevant information describing the theory and application of the requested best available control technology.

See Section 4.3

APPENDIX 10.1.6

COASTAL ZONE MANAGEMENT CERTIFICATION

10.1.6 COASTAL ZONE MANAGEMENT CERTIFICATION

APPENDIX 10.1.7

NOTICE OF PROPOSED CONSTRUCTION OR ALTERATION
(FAA FORM 7460-1)

DO NOT REMOVE CARBONS

Form Approved OMB No. 2120-000

U.S. Department of Transportation
Federal Aviation Administration

NOTICE OF PROPOSED CONSTRUCTION OR ALTERATION

Aeronautical Study Number

1. Nature of Proposal

A. Type	B. Class	C. Work Schedule Dates
[X] New Construction [ ] Alteration	[X] Permanent [ ] Temporary (Duration _____ months)	Beginning March 1991 End December 1994

2. Complete Description of Structure

A. Include effective radiated power and assigned frequency of all existing, proposed or modified AM, FM, or TV broadcast stations utilizing this structure.

B. Include size and configuration of power transmission lines and their supporting towers in the vicinity of FAA facilities and public airports.

C. Include information showing site orientation, dimensions, and construction materials of the proposed structure.

See Attachment A

(If more space is required, continue on a separate sheet.)

3A. Name and address of individual, company, corporation, etc. proposing the construction or alteration. *(Number, Street, City, State and Zip Code)*

(407) 640-2060
area code Telephone Number

Charles D. Henderson
Florida Power & Light Company
P.O. Box 078768
6001 Village Boulevard
West Palm Beach, FL 33407-0768

3B. Name, address and telephone number of proponent's representative if different than 3 above.

Not Applicable

4. Location of Structure

A. Coordinates *(To nearest second)*	B. Nearest City or Town, and State	C. Name of nearest airport, heliport, flightpark, or seaplane base
	Hollywood	Ft. Lauderdale/Hollywood
Latitude 26° 04' 5"	(1) Distance to 4B _____ Miles	(1) Distance from structure to nearest point of nearest runway 10,600 ft
Longitude 80° 11' 55"	(2) Direction to 4B West to East	(2) Direction from structure to airport West to East

5. Height and Elevation *(Complete to the nearest foot)*

A. Elevation of site above mean sea level	9 ft
B. Height of Structure including all appurtenances and lighting *(if any)* above ground, or water if so situated	150 ft
C. Overall height above mean sea level *(A + B)*	159 ft

6. Description of location of site with respect to highways, streets, airports, prominent terrain features, existing structures, etc. Attach a U.S. Geological Survey quadrangle map or equivalent showing the relationship of construction site to nearest airport(s). *(If more space is required, continue on a separate sheet of paper and attach to this notice.)*

See Attachment A, and Figures 1 and 2

Notice is required by Part 77 of the Federal Aviation Regulations (14 C.F.R. Part 77) pursuant to Section 1101 of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1101). Persons who knowingly and willingly violate the Notice requirements of Part 77 are subject to a fine (criminal penalty) of not more than $500 for the first offense and not more than $2,000 for subsequent offenses, pursuant to Section 902(a) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1472(a)).

I HEREBY CERTIFY that all of the above statements made by me are true, complete, and correct to the best of my knowledge. In addition, I agree to obstruction mark and/or light the structure in accordance with established marking & lighting standards if necessary.

Date	Typed Name/Title of Person Filing Notice	Signature
11/28/89	Charles D. Henderson/Manager	C. D. Henderson

FOR FAA USE ONLY *FAA will either return this form or issue a separate acknowledgement.*

The Proposal:

- [ ] Does not require a notice to FAA.
- [ ] Is not identified as an obstruction under any standard of FAR, Part 77, Subpart C, and would not be a hazard to air navigation.
- [ ] Is identified as an obstruction under the standards of FAR, Part 77, Subpart C, but would not be a hazard to air navigation.
- [ ] Should be obstruction [ ] marked [ ] lighted per FAA Advisory Circular 70/7460-1, Chapter(s) _____
- [ ] Obstruction marking and lighting are not necessary.

Supplemental Notice of Construction: FAA Form 7460-2 is required any time the project is abandoned, or

- [ ] At least 48 hours before the start of construction.
- [ ] Within five days after the construction reaches its greatest height.

This determination expires on _____ unless:

(a) extended, revised or terminated by the issuing office.

(b) the construction is subject to the licensing authority of the Federal Communications Commission and an application for a construction permit is made to the FCC on or before the above expiration date. In such case the determination expires on the date prescribed by the FCC for completion of construction, or on the date the FCC denies the application.

NOTE: Request for extension of the effective period of this determination must be postmarked or delivered to the issuing office at least 15 days prior to the expiration date.

If the structure is subject to the licensing authority of the FCC, a copy of this determination will be sent to that Agency.

Remarks:

Issued In	Signature	Date

FAA Form 7460-1 (8-85)

10.1.7-1

DO NOT REMOVE CARBONS

ERRATA-1/2

Attachment A

The proposed structures are four steel stacks which will be constructed for the Lauderdale Repowering Project. The stacks are required to exhaust gases from four combustion turbines (CTs). The CTs are connected to heat recovery steam generators (HRSGs) which will produce steam. The steam will be used in the existing steam electric generators at the site. Figures 1 and 2 show the site. Figure 3 shows a plot plan of the stack locations. Figures 4 and 5 show profiles of the plant. Figure 6 shows the stacks relative to the imaginary surfaces. After this facility is constructed, the existing two boilers, which have an elevation of about 120 ft, and the two associated 150-ft stacks will be removed (elevations are above grade, which is 7 ft above msl).

ZONING DESCRIPTIONS

ZONING

BROWARD COUNTY, FLORIDA

This pamphlet is a reprint of the Zoning Ordinance of the Code of Broward County, Florida, published by order of the Board of County Commissioners.

MUNICIPAL CODE CORPORATION

Tallahassee, Florida

Reprint
1984

ARTICLE LXII. LIGHT INDUSTRIAL M-1 DISTRICT

Sec. 39-1039. Purpose of district.

The M-1 Light Industrial District is intended primarily for the manufacture of small articles and nonobjectionable products not involving the use of any materials, processes or machinery likely to cause undesirable effects upon nearby or adjacent residential or business property. The M-1 district may directly abut a residential or business district, and the activities permitted in an M-1 district are intended to be such as may be compatible with such neighboring districts under the yard and separation regulations provided. In order to minimize conflict and preserve the M-1 districts for their primary purposes, residential and institutional uses are not permitted therein.

Sec. 39-1040. Uses permitted.

No building or structure, or part thereof, shall be erected, altered or used, or land or water used, in whole or in part, for other than one or more of the following uses:

(1) Any use permitted in a B-3 district, except as prohibited in section 39-1041.

(2) Manufacture of the following:

Brooms and brushes.
Candles.
Candy.
Ceramic products, electrically fired.
Cigars, cigarettes or snuff.
Clothing and hats.
Cosmetics and toiletries, except soap.
Dairy products.
Ice cream.
Jewelry.
Leather goods and luggage.
Optical equipment.
Orthopedic and medical supplies.
Paper products, and cardboard products.
Perfume.
Pharmaceutical products.
Plastic products, except pyroxylin.
Pottery, electrically fired.
Precision instruments.
Shoes.
Silverware.
Spices and spice packing.
Stationery.
Television, radio and phonograph.

(3) Manufacture of products from aluminum, brass, bronze, copper, steel or other metal, or from bone, cloth, hair, leather, paper, rubber, shell, plastic, wood or other materials, provided power not in excess of 20 horsepower on any 1 motor is utilized in the operation of any 1 machine, such as:

Artificial flowers, feathers or plumes.
Bags.
Buttons or novelties.
Canvas products.
Electrical fixtures.
Electronic devices.
Food products, chewing gum, syrups, fruit juices, extracts, drugs or medicines.

Hardware and cutlery.
Musical instruments.
Small parts and devices.

(4) Any of the following:

Bakery.
Cutting or blending of liquor.
Cheese making.
Carpenter and cabinet shop.
Electroplating.
Egg storage, candling or processing.
Hydroponic garden.
Hatchery, fish or fowl.
Motion picture studio.
Pattern making.
Printing, publishing, lithography and engraving.
Stamping, dieing, shearing or punching of metal not over one-eighth inch in thickness.
Tool, die and gauge shop.
Transformer and electrical switching station.
Boat building and repair, up to 45-foot length, when located more than 500 feet from residentially zoned property.
Plumbing or electrical shop entirely within an enclosed building.
Slat house.
Manufacture of powder blends, potting compounds and plastisols.
Manufacture of water-based and/or epoxy-based coatings, adhesives, sealants and paints.

(5) Warehouse and storage buildings.

(6) Accessory uses and structures, including living quarters accessory to a permitted use.

Sec. 39-1041. Uses prohibited.

The permissible uses enumerated in section 39-1040 above shall not be construed to include, either as a principal or accessory use, any of the following, which are listed for emphasis:

(1) The manufacture of any product or the utilization of any process or operation expressly specified for an M-2, M-3 or M-4 district.

(2) Foundry.

(3) Drop forging.

(4) Stamping, dieing, shearing or punching of metal exceeding one-eighth inch in thickness.

(5) Paint or varnish manufacture.

(6) Oil compounding or barreling.

(7) Manufacture of asphalt, brick, tile, cement, lime, plaster, concrete or products thereof.

(8) Open-air storage in bulk of asphalt, brick, building materials, butane, cement, clay products, concrete products, coal, contractors' equipment, cotton, fuel, gasoline, grain, gravel, grease, hay, ice, lead, lime, liquor, plaster, pipe, lumber, machinery, propane, roofing, rope, sand, stone, tar, tarred or creosoted products, terra cotta, timber, wine, wood or wool. This prohibition does not apply to storage of these materials in warehouses.

(9) Use of automatic screw machines.

(10) Institutions for the housing, care or treatment of sick, indigent, aged or adolescent persons.

(11) Dwellings except as accessory to a permitted use.

(12) Hotels, motels, apartment hotels, rooming, boarding or lodging houses, villas, bungalow courts.

(13) Motor freight terminals.

Sec. 39-1042. Height.

No building or structure shall be erected or altered to a height exceeding 100 feet.

Sec. 39-1043. Plot size.

There shall be no minimum required size of plot.

Sec. 39-1044. Yards.

Every plot shall be provided with the yards required under sections 39-163 through 39-169.

Secs. 39-1045—39-1054. Reserved.

ARTICLE LXIV. GENERAL INDUSTRIAL M-3 DISTRICT

Sec. 39-1071. Purpose of district.

The M-3 General Industrial District is intended primarily for the larger and heavier types of manufacturing uses

which normally have no serious effects upon contiguous nonresidential areas. In order to minimize conflict and to preserve the general industrial areas for the intended uses, certain residential and institutional uses are not permitted therein.

Sec. 39-1072. Uses permitted.

No building or structure, or part thereof, shall be erected, altered or used, or land or water used, in whole or in part, for other than one or more of the following uses:

(1) Any use permitted in M-2 districts.

(2) Any of the following uses:

Brewing and distilling of malt beverages or liquors.
Bulk storage of petroleum and petroleum products.
Butane or propane manufacturing or storage.
Can manufacturing from metal, such as tin cans or aluminum cans.
Carpet manufacture, power looms.
Celluloid or similar cellulose material manufacture or storage.
Cleansing preparation manufacturing, such as soaps, detergents, cleansers, etc.
Concrete batching or mixing plant.
Concrete products manufacture.
Cotton gin.
Cotton oil plant.
Cottonseed product.
Dredging base.
Dry ice manufacturing.
Feed, flour and grist milling.
Fertilizer compounding from dry, nonodorous materials.
Fertilizer compounding from liquid, nonodorous materials.
Furniture manufacturing, not elsewhere permitted.
Glass products from previously manufactured glass.
Magnetic wire manufacturing.

Oil compounding involving flammable materials, such as oil, lacquer, shellac, etc., except as incidental to other business.
Pottery manufacturing, not elsewhere permitted.
Salt works.
Septic tank service.
Soap manufacturing.
Vegetable oil manufacturing or refining.
Veneer or plywood plant.

(3) Any use not prohibited by section 39-1073, not prohibited by other resolutions or by law, and not listed as permissible only in an M-4 or an M-5 district.

(4) Accessory uses and structures, including living quarters accessory to a permitted use.

(5) Docks and docking of boats and ships for loading and unloading, storage, repair and building of boats not over 120 feet in length.

Sec. 39-1073. Uses prohibited.

(a) Dwellings except as accessory to a permitted use.

(b) Hotels, motels, apartment hotels, rooming, boarding or lodging houses, villas, bungalow courts.

(c) Institutions for the housing, care or treatment of sick, indigent, aged, adolescent or other persons.

(d) Any use which produces effects upon contiguous property in the form of noise, odor, vibration, smoke, particulate matter, glare, heat, or fire or explosive hazard to a degree equivalent to any use specified in this ordinance as first permitted in an M-4 or M-5 district.

Sec. 39-1074. Height.

No building or structure, or part thereof, shall be erected or altered to a height exceeding 150 feet.

Sec. 39-1075. Plot size.

Every plot utilized for a use first permitted in an M-3 district shall not be less than 100 feet in width and 10,000 square feet in area.

Sec. 39-1076. Yards.

Every plot shall be provided with yards required under sections 39-163 and 39-169.

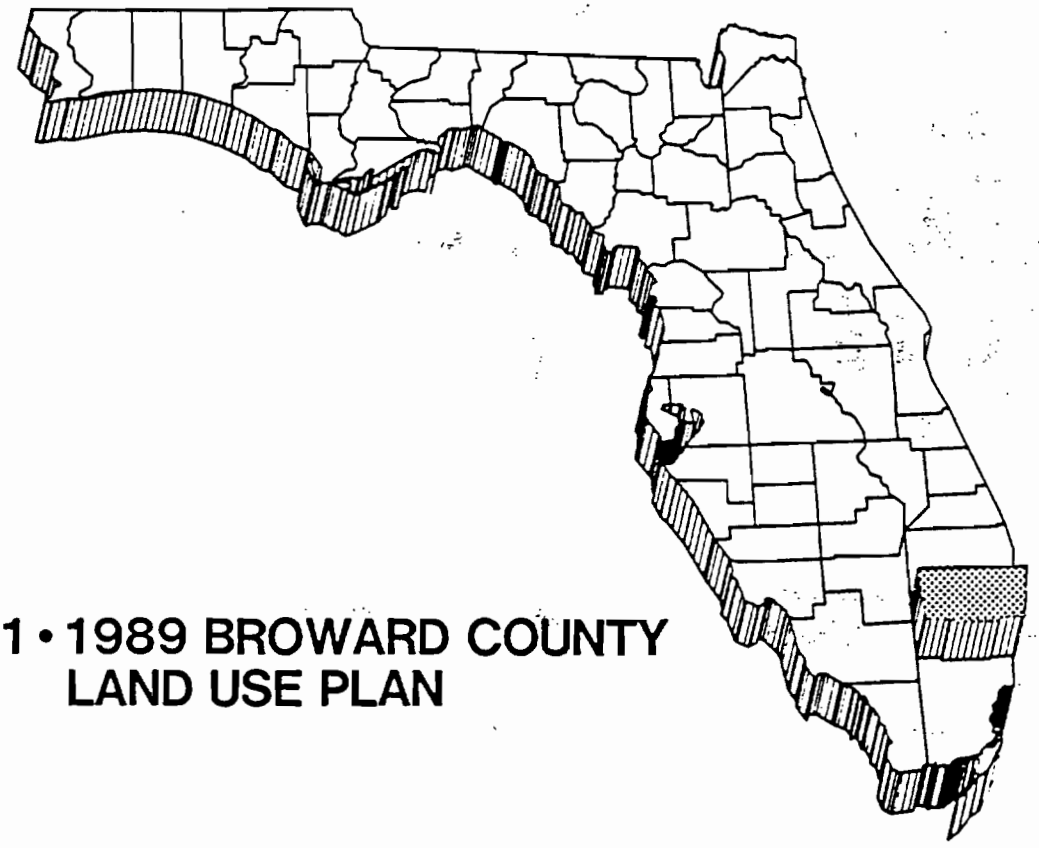
Secs. 39-1077—39-1086. Reserved.

APPENDIX 10.3

LAND USE PLAN DESCRIPTIONS

BROWARD COUNTY, FLORIDA

COMPREHENSIVE PLAN 1989



VOLUME 1 • 1989 BROWARD COUNTY LAND USE PLAN

Electric Energy

POLICY 08.01.19 Local government entities, Florida Power and Light Company, developers and landowners should coordinate and cooperate with one another with respect to the utilities route selection and location of electric facilities to ensure the future electrical energy needs of Broward County residents will be served. New electric transmission lines subject to the Florida Transmission Lines Siting Act should be sited in a manner that will consolidate such lines within existing corridors and that new corridors should be planned in coordination with land use plans of local governments.

OBJECTIVE 08.05.00 UTILITIES CATEGORY

Establish within the Future Broward County Land Use Plan Map (Series) a Utilities land use category to ensure the availability of land for a complete range of public and private utilities adequate to meet the current and future needs of Broward County's population.

POLICY 08.05.01 Permit those land uses in designated utilities areas which are identified within the Utilities Permitted Uses subsection of the Plan Implementation Requirements section of the Broward County Land Use Plan.

POLICY 08.05.02 Permit utilities uses within other specified land use categories as identified in the Permitted Uses subsection of the Plan Implementation Requirements section of the Broward County Land Use Plan, and as required to achieve Objective 08.05.00.

B. PERMITTED USES IN FUTURE LAND USE CATEGORIES

This section identifies those uses permitted in the future land use categories established within the Broward County Land Use Plan. Local government entity zoning as to permitted uses and densities must be in compliance with these permitted uses and the Future Broward County Land Use Plan Map (Series) designation.

Local government entity zoning as to permitted uses which is in compliance with a certified land use plan shall be in compliance with the Broward County Land Use Plan. A certified local land use plan and land development regulations adopted by a local government entity may prohibit or restrict any of the land uses permitted within any land use category in the Broward County Land Use Plan.

Areas designated on the Future Broward County Land Use Plan Map (Series) for particular uses are approximate. The exact boundaries for zoning will be determined by the local government entity within the reasonable limits of the designation on the map. Local government entities will determine those uses which will be permitted, allowed by special exceptions or not permitted from those uses listed below.

INDUSTRIAL USE

The purpose of reserving land for industrial uses, consistent with Objective 03.01.00, is to provide opportunity for the retention and expansion of Broward County's economic base activities. Although other uses are permitted in areas designated industrial, at least 80 percent of such land area must be devoted to industrial use, such as manufacturing, warehouse distribution, research and development, or other substantial employment based activities.

Uses permitted in areas designated industrial are as follows:

1. Light and heavy industrial uses.

2. Heavy commercial uses including new and used automobile, truck, motorcycle, boat and trailer display, sales, and service; newspaper, magazine, and printing plants; bakeries, carpentry, cabinet shops and other trade shops; motion picture studios; ice houses; propane gas sales and repair; and salvage yards.

3. Educational, scientific and industrial research facilities, research laboratories, and medical or dental laboratories.

4. Office uses.

5. Transportation and communication facilities.

6. Recreation and open space, cemeteries, and commercial recreation uses, as long as the location of these uses does not preclude or adversely affect the future use of surrounding areas for industry.

7. Community facilities and utilities.

8. Non-residential agricultural uses.

9. Ancillary commercial uses within buildings devoted to primary industrial uses.

10. Wholesaling uses.

11. The following uses may also be permitted if certified by the Broward County Planning Council in the local land use plan as long as the total area of these uses does not consume more than 20 percent of the industrial land designated on the Future Broward County Land Use Plan Map (Series) within a flexibility zone, and as long as the location of these uses do not preclude or adversely affect the future use of surrounding areas for industrial uses:

    a. Commercial and retail business uses.

    b. Hotel, motel and similar lodging.

UTILITIES USE

Utilities are designated on the Future Broward County Land Use Plan Map (Series), consistent with Objective 08.05.00, to ensure the availability of land necessary to provide an adequate level of utility service to meet the current and future needs of Broward County.

Utilities are also allowed in areas designated residential, commercial, office park, industrial, employment center, regional activity center and agricultural.

Uses permitted in areas designated utilities are as follows:

1. Utilities such as water and wastewater treatment plants, pumping stations, electrical power plants and substations, solid waste disposal and transfer stations.

2. Other uses determined to be ancillary to the primary uses described in (1).

The following uses may also be permitted in the areas designated utilities as long as the location of these uses does not preclude or adversely affect the future use of the surrounding areas for utility facilities:

3. Recreation and open space uses.

4. Non-residential agricultural uses.

5. Communication facilities.

BROWARD COUNTY PERMIT

BROWARD COUNTY ENVIRONMENTAL QUALITY CONTROL BOARD
500 S.W. 14th Court
Fort Lauderdale, Florida 33315
(305) 765-4900

License To Operate A Direct Discharge Industrial Wastewater Treatment Facility

OWNER/AGENT:
M. E. Sanders, Plant Manager
Florida Power & Light Co.
Lauderdale Plant
P.O. Box 155
Dania, Florida 33004

LICENSE NO. IWH-102-89

FACILITY NAME/ADDRESS
Florida Power & Light Co.
Lauderdale Plant
S. W. 42nd Street
(2 miles west of Ravenswood Rd.)
Ft. Lauderdale, Florida 33314
Phone: (305) 797-1502

This license is issued under the provisions of the Code of Regulations of Broward County Environmental Quality Control Board, hereinafter called the Code. The above-named applicant, hereinafter called licensee, is hereby authorized to perform the work or operate the facility shown on the approved drawing(s), plans, documents, and specifications submitted by applicant and made a part hereof and described specifically below. If no objection to this license is received within 14 days you will be deemed to have accepted it and all the attached terms and conditions.

TO OPERATE: A direct discharge industrial wastewater treatment and disposal system as described on description page 2.

IN ACCORDANCE WITH: BCEQCB license renewal application received 2/23/89 (none attached)

The licensee shall maintain his discharge within the limits for the parameters listed on page 3 in addition to all others required by applicable local, state or Federal Regulations. Licensee sampling is required at the frequency described on analysis requirements page 3.

Subject to General Conditions 1 thru 12 and Specific Conditions 1 thru 4 and attachment "A".

Expiration date: 3/10/90
Renewal Application Due 1/9/90
Issued this 25th day of February, 1989
Broward County Environmental Quality Control Board
Prepared by Glenn Malastron

Victor H. Howard, P.E.
Pollution Control Officer

c:\wpdoc7\iwh10289.lic

This license allows Florida Power & Light Company - Lauderdale Plant to operate a direct discharge industrial wastewater treatment and disposal system discharging industrial wastewaters associated with the generation of electricity from steam to Class III Surface Waters and Class G-II Groundwaters and more particularly described as follows:

Surface Waters

1) A maximum of 344 MGD of once-through cooling water at a flow rate of 232,000 GPM is discharged from Units 4 & 5 to the discharge canal, and eventually to the South Fork of the New River, classified as Class III Surface Waters.

2) Up to 8.64 MGD of auxiliary cooling water at a flow rate of 6000 GPM is discharged from Units 4 & 5 to the discharge canal as described in (1) above.

3) Stormwaters from non-equipment area drains discharge at a flow rate of 24,029 GPM to the intake and discharge canals, and eventually to the South Fork of the New River, classified as Class III Surface Waters. Direct stormwater discharge is not covered by this license.

Groundwater

4) A total of 296,000 gallons per year of wastewater from air preheater wash (metal cleaning wastes), fireside boiler wash (soot leaching & metal cleaning wastes) and stack wash (wastewater may or may not be generated depending on the cleaning process used) is discharged to solids settling basins B-1A & B-1B from where it is discharged to the evaporation/percolation pond, classified as Class G-II Groundwaters (Batch Discharge).

5) Up to 2,885,250 gallons per year of wastewaters from neutralization tank discharge and coagulator blowdown are discharged to the stub canal evaporation/percolation pond, classified as Class G-II Groundwaters (Batch Discharge).

6) Up to 4,854,00 gallons per year of boiler blowdown wastewater is discharged to the stub canal evaporation/percolation pond, classified as Class G-II Groundwaters.

7. Oily waters and equipment cleaning washwaters as well as somestorm water run off, totalling 2,085,000 gallons per year are collected by equipment area drains and routed via various sumps to an oil/water separator and then to either the stub canal evaporation/percolation pond or to diked areas of the fuel oil storage areas, classified as Class G-II Groundwaters.

The licensee shall maintain the quality and quantity of the effluents discharged such that the groundwater quality outside a defined Zone of Discharge is within the water quality standards expressed in Section 27-5.073 of the BCEQCB Code of Regulations. For the purposes of this license the defined Zone of Discharge is at the perimeter of the property line. The surface water quality after thorough mixing (500 to 1) shall be within the water quality standards expressed in Section 27-5.071 of the BCEQCB Code of Regulations. The licensee may be required to eliminate, reduce flow, or provide additional treatment to discharges should conditions of the waters within the Zone of Discharge, as monitored in the monitoring wells, warrant or should quality of the discharges to surface waters warrant.

GROUNDWATER

Sampling and analysis of groundwater monitoring wells U-1, OB-2, OB-3, M-2, M-3, and M-4 shall be conducted semi-annually for the following.

PARAMETER	LIMITS WATER QUALITY STANDARDS (5.073) AT PERIMETER OF ZONE OF DISCHARGE
pH	6.5-8.5
Phosphates (Total as P)	0.01 mg/l
Nitrogen-Nitrate	10 mg/l
Chlorides	-------
Oil & Grease	10 mg/l
Copper	1.0 mg/l
Chromium (Total)	0.05 mg/l
Selenium	0.01 mg/l
Vanadium	---------
Zinc	5.0 mg/l
Silver	0.05 ug/l
Nickel	0.1 mg/l
Lead	0.05 mg/l
Mercury	0.002 ug/l
PCB's	0.01 ug/l

SURFACE WATERS

Sampling and analysis of the intake water and the once through unit cooling water discharge (1) and auxiliary cooling waters discharge (2) to surface waters shall be conducted prior to thorough mixing with the receiving waters and reported semi-annually. The difference between intake water ambient quality and discharge water quality shall be within water quality standards (5.071) after thorough mixing.

PARAMETERS	FREQUENCY	LIMITS WATER QUALITY STANDARDS(5.071) AFTER THOROUGH MIXING (500 TO 1)
Flow (gallons per day)	Daily	---------
*Discharge Temperature	Daily	90 degrees F
*Temperature Rise	Every 4 hrs.	---------
Total Residual Chlorine	Twice/Month	0.01 mg/l
pH	Semi-Annually	6.5-8.5
Phosphorus(Total)	Semi-Annually	0.05 mg/l
Nitrogen-Total	Semi-Annually	1.50 mg/l
Oil & Grease	Semi-Annually	1.0 mg/l
Copper	Semi-Annually	0.015 mg/l
Chromium (Total)	Semi-Annually	0.05 mg/l
Selenium	Semi-Annually	0.025 mg/l
Vanadium	Semi-Annually	---------
Zinc	Semi-Annually	1.0 mg/l
Silver	Semi-Annually	0.05 ug/l
Nickel	Semi-Annually	0.1 mg/l
Lead	Semi-Annually	0.03 mg/l
Mercury	Semi-Annually	0.1 ug/l
PCB's	Semi-Annually	0.001 ug/l

*With respect to temperature measurements, the cooling water effluent shall have a Zone of Mixing in accordance with Section 27-4.244 F.A.C. and extending from the discharge point in the direction of normal flow a distance of 800 meters.

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations and restrictions set forth herein are accepted by the licensee and enforceable by the EQCB pursuant to Chapter 27 of the Broward County Environmental Quality Control Board (EQCB) Code. The EQCB will review this licence periodically and may revoke the license, initiate administrative and/or judicial action for any violation of the conditions by the licensee, its agents, employees, servants or representatives.

2. This license is valid only for the specific uses set forth in the license application and any deviation from the approved uses may constitute grounds for revocation and enforcement action by the EQCB.

3. In the event the licensee is temporarily unable to comply with any of the conditions of the license, the licensee shall notify the PCO within 12 hours. Within 5 working days of the event, the licensee shall submit a written report to the PCO that describes the incident, its cause, the measures being taken to correct the problem and prevent its reoccurrence, the owner's intention toward repair, replacement, and reconstruction of destroyed facilities, and a schedule of events leading toward operation within the license conditions.

4. The issuance of this license does not convey any vested rights or exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any violations of federal, state or local laws or regulations.

5. This license must be available for inspection on licensee's premises during the entire life of the license.

6. By accepting this license, the licensee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, that are submitted to the EQCB, may be used by the EQCB as evidence in any enforcement proceeding arising under EQCB rules and regulations, except where such use is prohibited by Section 403.111, Florida Statutes.

7. The licensee agrees to comply with Chapter 27, Code of Regulations of the EQCB.

8. Any new owner of a licensed facility shall apply by letter for a transfer of license within thirty (30) days after sale or legal transfer. The transferor shall remain liable for performance in accord with the license until the transferee applies for and is granted transfer of license.

9. The licensee, by acceptance of this license, specifically agrees to allow access to the licensed source at reasonable times by EQCB personnel for the purposes of inspection and testing to determine compliance with this license and EQCB rules and regulations.

10. This license does not constitute a waiver of or approval of any other license that may be required for other aspects of the total project.

11. If the licensee wishes to renew the license or extend its term, he shall make application 60 days prior to its expiration. Expired licenses are not renewable.

12. In addition to the general conditions set forth above, each license issued by the EQCB shall contain specific conditions determined by site conditions and requirements pursuant to the regulations as determined by the PCO. Licensee agrees that specific conditions are enforceable by the EQCB for any violation thereof.

SPECIFIC CONDITIONS:

1. Any change in the licensed confirmation and/or operation of the treatment or disposal system facility shall be submitted for approval prior to change.

2. Samples shall be taken at a point downstream of the treatment facilities just before effluent is discharged to the sanitary sewer. Location and configuration of the sampling point shall be set by BCEQCB. Samples shall consist of grab samples taken during a period of peak discharge and shall be sampled and analyzed by a lab certified by Florida Department of Environmental Regulation. Analysis reports shall be submitted to BCEQCB no later than the 15th day of the following month.

3. A facility with a periodic batch discharge shall maintain a discharge log book available for inspection by BCEQCB. Included in the log shall be the date, time, quantity of discharge, analysis performed, laboratory performing analysis, name of person doing sampling and signature of person recording the event in log book. Records shall be kept for a period of not less than five (5) years.

4. Any hazardous waste that is generated and leaves the facility shall be reported to BCEQCB on a monthly basis by the fifteenth (15) day of the following month and be disposed in accordance with EPA and DER requirements. A copy of the manifest must be included.

ATTACHMENT "A"

HAZARDOUS MATERIAL SECTION OF THE
DIRECT DISCHARGER INDUSTRIAL WASTEWATER LICENSE

NATURE OF BUSINESS: Steam electric power plant

AREAS COVERED: Laboratory, warehouse, water treatment plant, storeroom building, 2 storage sheds, and satellite accumulation areas.

COMPLIANCE (FEATURES):

Appropriate building(s) act as secondary containment for chemicals within them.

No more than 55 gallons shall be accumulated in each satellite area and each drum is labeled as to type of waste and has appropriate locking device to prevent unauthorized addition to drum. Appropriate plant personnel coordinate drum usage, etc. A portable satellite storage containment system is utilized for each drum.

Facility is manned 24 hrs./day, 7 days/week, and drums are inspected daily or weekly as appropriate.

This license is subject to
Attachment "A" Specific
Conditions 1,2,3,5,7 & 9
shown below.

ATTACHMENT "A" SPECIFIC CONDITIONS

1. An up to date Inventory List of hazardous material stored shall be submitted with license renewal and with applications for operation or construction licenses.

2. Report any hazardous waste that leaves the facility to EQCB by legible copy of manifest on a monthly and annual basis, by the fifteenth day of the following month.

3. A Spill Contingency Plan shall be prepared and kept on site. Upon discharge of any hazardous material immediately implement the emergency clean-up plan. Discharges shall be reported to EQCB within 12 hours as provided in General Condition 3.

4. Monitor wells shall be tested weekly.

5. Employees shall be trained in the handling of hazardous materials and the Spill Contingency Plan.

6. EQCB shall be notified for purposes of inspection 24 hours prior to removal of a tank. If there is evidence of release of product, a clean-up will be ordered and a monitor well shall be installed.

7. Hazardous material facilities shall have hazardous materials or wastes only in areas that have no floor drains or other means of discharge to septic tank or ground and have adequate secondary containment. Reactive materials shall be kept in separate secondary containments. Secondary containment areas shall be under cover and allow no storm water within. Waste storage areas require secondary containment.

8. Disassembly shall be done within a secondary containment area. All containers of fluids (engines, transmissions, fuel tanks, radiators, overflow tanks and hydraulic and windshield washer systems); their drained fluids; and undrained vehicles awaiting disassembly shall be stored within a secondary containment. Outside storage of the above parts is prohibited unless empty and stored with the fluid cavities open for inspection but not to storm water.

NOTICE OF PERMIT

Broward County
AP - Florida Power & Light Co. -
Lauderdale Unit 4

Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light
P. O. Box 14000
Juno Beach, FL 33408

Dear Mr. Fair:

Enclosed is Permit Number AO 06-146594 to operate an air pollution source issued pursuant to Section 403.087, Florida Statutes.

Persons whose substantial interests are affected by this permit have a right, pursuant to Section 120.57, Florida Statutes, to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapters 17-103 and 28-5.201, FAC, and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400, within fourteen (14) days of receipt of this notice. Failure to file a petition within the fourteen (14) days constitutes a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, Florida Statutes. This permit is final and effective on the date filed with the Clerk of the Department unless a petition is filed in accordance with this paragraph or unless a request for extension of time in which to file a petition is filed within the time specified for filing a petition and conforms to Rule 17-103.070, FAC. Upon timely filing of a petition or a request for an extension of time this permit will not be effective until further Order of the Department.

When the Order (Permit) is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the Final Order is filed with the Clerk of the Department.

PROJECT: Florida Power & Light Co.
Lauderdale Unit 4

This permit is issued under the provisions of Chapter 403, Florida Statutes, and Florida Administrative Code Rule 17-2, and in conformance with all existing regulations of the Florida Department of Environmental Regulation. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the Department and made a part hereof and specifically described as follows:

OPERATE: An air pollution source consisting of a 161 MW (gross capacity) steam generating unit (#4) burning a variable combination of natural gas, used oil fuel from FP & L operations, and No. 6 fuel oil with a maximum heat input rate of 1725 million BTU/hr., discharging pollutants through a stack 151 feet above ground level.

IN ACCORDANCE WITH: Application for Renewal of Permit to Operate Air Pollution Sources dated March 10, 1988, and Application to Operate Air Pollution Sources received September 23, 1977 (none are attached).

LOCATED AT: Griffin Road, Dania, Broward County, Florida.

TO SERVE: An electric service utility facility (SIC # 4911)

SUBJECT TO: General Conditions 1-15 and Specific Conditions 1-10.

* This permit is a renewal of AO 06-60682 issued May 26, 1983, and a modification of AO 06-146594 issued May 31, 1988.

Effective November 30, 1982

PERMITTEE:
Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/01
PERMIT/CERTIFICATION NUMBER: AO 06-146594 *
DATE OF ISSUE: [illegible]
EXPIRATION DATE: May 15, 1995

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations, and restrictions set forth herein are "Permit Conditions" and as such are binding upon the permittee and enforceable pursuant to the authority of Sections 403.161, 403.727, or 403.859 through 403.861, Florida Statutes. The permittee is hereby placed on notice that the Department will review this permit periodically and may initiate enforcement action for any violation of the "Permit Conditions" by the permittee, its agents, employees, servants or representatives.

2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action by the Department.

3. As provided in Subsections 403.087(6) and 403.722(5), Florida Statutes, the issuance of this permit does not convey any vested rights or any exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations. This permit does not constitute a waiver of or approval of any other Department permit that may be required for other aspects of the total project which are not addressed in the permit.

4. This permit conveys no title to land or water, does not constitute state recognition or acknowledgement of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the state. Only the Trustees of the Internal Improvement Trust Fund may express state opinion as to title.

5. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, plant or aquatic life or property and penalties therefore caused by the construction or operation of this permitted source, nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department.

6. The permittee shall at all times properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed or used by the permittee to achieve compliance with the conditions of this permit, as required by Department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit, and when required by Department rules.

7. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, upon presentation of credentials or other documents as may be required by law, access to the premises, at reasonable times, where the permitted activity is located or conducted for the purpose of:

   a. Having access to and copying any records that must be kept under the conditions of the permit;

   b. Inspecting the facility, equipment, practices, or operations regulated or required under this permit; and

   c. Sampling or monitoring any substances or parameters at any location reasonably necessary to assure compliance with this permit or Department rules.

   Reasonable time may depend on the nature of the concern being investigated.

8. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in the permit, the permittee shall immediately notify and provide the Department with the following information:

   a. a description of and cause of noncompliance; and

   b. the period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the noncompliance.

PERMITTEE:
Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/01
PERMIT/CERTIFICATION NUMBER: AO 06-146594 *
DATE OF ISSUE: AUG
EXPIRATION DATE: May 15, 1993

GENERAL CONDITIONS:

The permittee shall be responsible for any and all damages which may result and may be subject to enforcement action by the Department for penalties or revocation of this permit.

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, which are submitted to the Department, may be used by the Department as evidence in any enforcement case arising under the Florida Statutes or Department rules, except where such use is proscribed by Sections 403.73 and 403.111, Florida Statutes.

10. The permittee agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance, provided however, the permittee does not waive any other rights granted by Florida Statutes or Department rules.

11. This permit is transferable only upon Department approval in accordance with Florida Administrative Code Rules 17-4.12 and 17-30.30, as applicable. The permittee shall be liable for any noncompliance of the permitted activity until the transfer is approved by the Department.

12. This permit is required to be kept at the work site of the permitted activity during the entire period of construction or operation.

13. This permit also constitutes:

( ) Determination of Best Available Control Technology (BACT)
( ) Determination of Prevention of Significant Deterioration (PSD)
( ) Certification of Compliance with State Water Quality Standards (Section 401, PL 92-500)
( ) Compliance with New Source Performance Standards

14. The permittee shall comply with the following monitoring and record keeping requirements:

a. Upon request, the permittee shall furnish all records and plans required under Department rules. The retention period for all records will be extended automatically, unless otherwise stipulated by the Department, during the course of any unresolved enforcement action.

b. The permittee shall retain at the facility or other location designated by this permit records of all monitoring information (including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation), copies of all reports required by this permit, and records of all data used to complete the application for this permit. The time period of retention shall be at least three years from the date of the sample, measurement, report or application unless otherwise specified by Department rule.

c. Records of monitoring information shall include:

- the date, exact place, and time of sampling or measurements;
- the person responsible for performing the sampling or measurements;
- the date(s) analyses were performed;
- the person responsible for performing the analyses;
- the analytical techniques or methods used; and
- the results of such analyses.

15. When requested by the Department, the permittee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the permit. If the permittee becomes aware that relevant facts were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be submitted or corrected promptly.

PERMITTEE:
Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/01
PERMIT/CERTIFICATION NUMBER: AO 06-146594 *
DATE OF ISSUE: AUG 05 1990
EXPIRATION DATE: ~~May~~ 15, ~~1993~~

SPECIFIC CONDITIONS:

1. Compliance testing shall be conducted for the sources covered by this permit once each federal fiscal year in accordance with the methods specified below.

2. Emission limiting standards are as follows:

In accordance with Florida Administrative Code Rules 17-2.600(5)(b) and 17-2.250(3):

- SO_2 emissions shall not exceed 1.1 pounds per million BTU heat input.

- For steady state operations
  Visible emissions shall not exceed 20% opacity.
  Particulate emissions shall not exceed 0.1 pounds per million BTU heat input.

- For soot blowing and load changes

  Visible emissions shall not exceed 60% opacity during the 3 hour period of excess emissions allowed for soot blowing and load changes.

  Particulate emissions shall not exceed an average of 0.3 pounds per million BTU heat input during the three hour period of excess emissions allowed for soot blowing and load changes.

3. The compliance test report shall include results of tests by the following method:

Source/Emission Point	Pollutant	Test Method
Unit No. 4	Particulate (Steady State & Soot Blowing)	EPA Method 17 * or EPA Method 5
	Visible Emissions (Steady State & Soot Blowing)	DER Method 9
	SO_2	**

* EPA Method 17 may be used only if the stack temperature is less than 375°F.

** Stack testing for SO_2 is required if the equivalent sulfur content of the fuel exceeds 2.5% . Sulfur content shall be verified by submittal of monthly fuel analyses reports on a quarterly basis.

4. Emissions compliance testing should be conducted with the source firing No. 6 fuel oil and/or natural gas and operating within ten percent (10%) of its rated capacity; provided, however, that such testing may be conducted with the source operating at less than ninety percent (90%) of its rated capacity, in which case the source may subsequently be operated at any capacity up to one hundred ten percent (110%) of the average load at which compliance was demonstrated, and at higher capacities for up to fifteen days for purposes of additional compliance testing. A particulate test to show compliance must be conducted within sixty (60) days of the monthly fuel analysis if the equivalent sulfur content of the fuel burned (fuel oil and/or natural gas)is increased by 0.5 percentage points or more from that used during the previous test.

5. The Department shall be notified of expected test dates at least fifteen (15) days prior to compliance testing.

6. On or before March 1 of each calendar year, a completed DER Form 17-1.202(6), Annual Operations Report Form for Air Emissions Sources shall be submitted to the Department.

7. Copies of all reports, tests, notifications or other submittals required by this permit shall be submitted to both the Department of Environmental Regulation, Southeast District Office and Broward County Environmental Quality Control Board.

PERMITTEE:
Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/01
PERMIT/CERTIFICATION NUMBER: AO 06-146594 *
DATE OF ISSUE: AUG 05 1988
EXPIRATION DATE: ~~May~~ 15, ~~1993~~

SPECIFIC CONDITIONS CONT.:

see cond. letter 7/15/88 NO CEM

8. In addition to the requirements of General Condition 8 of this permit, a written quarterly report shall be submitted to the Department of all opacity exceedances of emission limitations specified in Florida Administrative Code Rules 17-2.250(1) through (4) and 17-2.600(5)(b)1. The report shall state the cause, period of noncompliance, and steps taken for corrective action and/or prevention of recurrence. If the opacity level cannot be determined due to an opacity monitor malfunction or for any other reason, the report shall state the cause, duration and action taken - all recorded data shall be maintained on file by Florida Power & Light for no less than two years and made available to the Department upon request.

9. All present and future variance orders or rule changes which are applicable to this source take precedence over any affected condition of this permit.

10. Burning of used oil meeting EPA specifications (40 CFR S266.40) and generated from FPL operations shall be permitted under the following conditions:

(a) Each Batch of used oil to be burned shall be sampled and analyzed for: Arsenic, Chromium, Cadmium, total Halogens, and Lead using EPA/DER or ASTM approved methods. Split samples of the used oil shall be retained for three (3) months after analysis for further testing if necessary.

(b) Results of used oil sampling and analysis performed pursuant to Specific Condition 10(a) shall be retained by permittee for at least three (3) years and made available for inspection by DER upon request.

(c) An estimate of the total quantity of used oil burned during the applicable calender year shall be included in the Annual Operations Report (AOR) for Air Emissions Sources. The permittee will submit with the AOR a summary of the range of values for each constituent analyzed pursuant to Specific Condition 10(a).

RE: **Lauderdale Plant, Unit No. 5**
DER Air Operating Permit No. AO-06-143213
Specific Condition No. 4 - Emissions Compliance Testing

Dear Ms. Brooks:

As we discussed by phone on Friday, May 27, 1988 and today, this letter is written in confirmation of the Department's agreement to allow emissions compliance testing of the above-captioned unit while firing a combination of fuel oil and natural gas with an equivalent sulfur content of one percent. All other testing conditions remain as written.

I am attaching a copy of this letter to our copy of the permit in question and hereby request that you attach this letter to your file copy so we have consistent records. This will prevent potential confusion.

If you have any questions, please call me at (407) 694-3648.

Sincerely,

Peter L. Ogden

Lauderdale Unit 5

Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light
P. O. Box 14000
Juno Beach, FL 33408

Dear Mr. Fair:

Enclosed is Permit Number AO 06-143213 to operate an air pollution source issued pursuant to Section 403.087, Florida Statutes.

When the Order (Permit) is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the Final Order is filed with the Clerk of the Department.

I.D. NUMBER: 50/BRO/06/0037/02
PERMIT/CERTIFICATION NUMBER: AO 06-143213 *
DATE OF ISSUE: MAY [illegible] 1990
EXPIRATION DATE: February 19, 1993
COUNTY: Broward
LATITUDE/LONGITUDE: 26°04'06"N/80°12'00"W
UTM: Zone 17; 600.0 Km. E; 2883.2 Km. N
PROJECT: Florida Power & Light
Lauderdale Unit 5

This permit is issued under the provisions of Chapter 403, Florida Statutes, and Florida Administrative Code Rule 17-2, and in conformance with all existing regulations of the Florida Department of Environmental Regulation. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the Department and made a part hereof and specifically described as follows:

OPERATE: An air pollution source consisting of a 161 Megawatt (gross capacity) steam generating unit (#5) burning a variable combination of natural gas, used oil fuel from FP & L operations, and No. 6 fuel oil with a maximum heat input rate of 1725 million BTU/hr , discharging pollutants through a stack 151 feet above ground level.

IN ACCORDANCE WITH: Application for Renewal dated December 14, 1987, and Application to Operate Air Pollution Source dated October 7, 1977, (none are attached).

LOCATED AT: Griffin Road, Dania, Broward County, Florida.

TO SERVE: An electric service utility facility. (SIC # 4911)

SUBJECT TO: General Conditions 1-15 and Specific Conditions 1-10.

* This permit is a renewal of AO 06-60860 issued February 24, 1983, and a modification of AO 06-143213 issued March 9, 1988.

DER Form 17-1.201(5)
Effective November 30, 1982

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations, and restrictions set forth herein are "Permit Conditions" and as such are binding upon the permittee and enforceable pursuant to the authority of Sections 403.161, 403.727, or 403.859 through 403.861, Florida Statutes. The permittee is hereby placed on notice that the Department will review this permit periodically and may initiate enforcement action for any violation of the "Permit Conditions" by the permittee, its agents, employees, servants or representatives.

2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action by the Department.

3. As provided in Subsections 403.087(6) and 403.722(5), Florida Statutes, the issuance of this permit does not convey any vested rights or any exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations. This permit does not constitute a waiver of or approval of any other Department permit that may be required for other aspects of the total project which are not addressed in the permit.

4. This permit conveys no title to land or water, does not constitute state recognition or acknowledgement of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the state. Only the Trustees of the Internal Improvement Trust Fund may express state opinion as to title.

5. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, plant or aquatic life or property and penalties therefore caused by the construction or operation of this permitted source, nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department.

6. The permittee shall at all times properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed or used by the permittee to achieve compliance with the conditions of this permit, as required by Department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit, and when required by Department rules.

7. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, upon presentation of credentials or other documents as may be required by law, access to the premises, at reasonable times, where the permitted activity is located or conducted for the purpose of:

   a. Having access to and copying any records that must be kept under the conditions of the permit;

   b. Inspecting the facility, equipment, practices, or operations regulated or required under this permit; and

   c. Sampling or monitoring any substances or parameters at any location reasonably necessary to assure compliance with this permit or Department rules.

   Reasonable time may depend on the nature of the concern being investigated.

8. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in the permit, the permittee shall immediately notify and provide the Department with the following information:

   a. a description of and cause of noncompliance; and

   b. the period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the noncompliance.

GENERAL CONDITIONS:

The permittee shall be responsible for any and all damages which may result and may be subject to enforcement action by the Department for penalties or revocation of this permit.

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, which are submitted to the Department, may be used by the Department as evidence in any enforcement case arising under the Florida Statutes or Department rules, except where such use is proscribed by Sections 403.73 and 403.111, Florida Statutes.

10. The permittee agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance, provided however, the permittee does not waive any other rights granted by Florida Statutes or Department rules.

11. This permit is transferable only upon Department approval in accordance with Florida Administrative Code Rules 17-4.12 and 17-30.30, as applicable. The permittee shall be liable for any noncompliance of the permitted activity until the transfer is approved by the Department.

12. This permit is required to be kept at the work site of the permitted activity during the entire period of construction or operation.

13. This permit also constitutes:

( ) Determination of Best Available Control Technology (BACT)
( ) Determination of Prevention of Significant Deterioration (PSD)
( ) Certification of Compliance with State Water Quality Standards (Section 401, PL 92-500)
( ) Compliance with New Source Performance Standards

14. The permittee shall comply with the following monitoring and record keeping requirements:

a. Upon request, the permittee shall furnish all records and plans required under Department rules. The retention period for all records will be extended automatically, unless otherwise stipulated by the Department, during the course of any unresolved enforcement action.

b. The permittee shall retain at the facility or other location designated by this permit records of all monitoring information (including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation), copies of all reports required by this permit, and records of all data used to complete the application for this permit. The time period of retention shall be at least three years from the date of the sample, measurement, report or application unless otherwise specified by Department rule.

c. Records of monitoring information shall include:

- the date, exact place, and time of sampling or measurements;
- the person responsible for performing the sampling or measurements;
- the date(s) analyses were performed;
- the person responsible for performing the analyses;
- the analytical techniques or methods used; and
- the results of such analyses.

15. When requested by the Department, the permittee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the permit. If the permittee becomes aware that relevant facts were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be submitted or corrected promptly.

PERMITTEE:
Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/02
PERMIT/CERTIFICATION NUMBER: AO 06-143213
DATE OF ISSUE:
EXPIRATION DATE: February 15, 1993

SPECIFIC CONDITIONS:

1. Compliance testing shall be conducted for the sources covered by this permit once each federal fiscal year in accordance with the methods specified below.

2. Emission limiting standards are as follows:

In accordance with Florida Administrative Code Rule 17-2.250(3) and 17-2.600(5)(b):

- SO_2 emissions shall not exceed 1.1 pounds per million BTU heat input.

- For steady state operations
  Visible emissions shall not exceed 20% opacity.
  Particulate emissions shall not exceed 0.1 pounds per million BTU heat input.

- For soot blowing and load changes

  Visible emissions shall not exceed 60% opacity during the 3 hour period of excess emissions allowed for soot blowing and load changes.

  Particulate emissions shall not exceed an average of 0.3 pounds per million BTU heat input during the three hour period of excess emissions allowed for soot blowing and load changes.

3. The compliance test report shall include results of tests by the following method:

Source/Emission Point	Pollutant	Test Method
Unit No. 5	Particulate (Steady State & Soot Blowing)	EPA Method 17 * or EPA Method 5
	Visible Emissions (Steady State & Soot Blowing)	DER Method 9
	SO_2	**

* EPA Method 17 may be used only if the stack temperature is less than 375°F.

** Stack testing for SO_2 is required if the equivalent sulfur content of the fuel exceeds 2.5% . Sulfur content shall be verified by submittal of monthly fuel analyses reports on a quarterly basis. The compliance test report shall be submitted to the Department in accordance with FAC Rule 17-2.700(7).

4. Emissions compliance testing should be conducted with the source firing No. 6 fuel oil and operating within ten percent (10%) of its rated capacity; provided, however, that such testing may be conducted with the source operating at less than ninety percent (90%) of its rated capacity, in which case the source may subsequently be operated at any capacity up to one hundred ten percent (110%) of the average load at which compliance was demonstrated, and at higher capacities for up to fifteen days for purposes of additional compliance testing. A particulate test to show compliance must be conducted within sixty (60) days of the monthly fuel analysis if the equivalent sulfur content of the fuel burned (fuel oil and / or natural gas) is increased by 0.5 percentage points or more from that used during the previous test.

5. The Department shall be notified of expected test dates at least fifteen (15) days prior to compliance testing.

6. On or before March 1 of each calendar year, a completed DER Form 17-1.202(6), Annual Operations Report Form for Air Emissions Sources shall be submitted to the Department. Show formulas with input and output data.

PERMITTEE:

PERMIT/CERTIFICATION NUMBER: AO 06-143213
DATE OF ISSUE:
EXPIRATION DATE: February 15, 1993

SPECIFIC CONDITIONS:

7. Copies of all reports, tests, notifications or other submittals required by this permit shall be submitted to both the Department of Environmental Regulation, Southeast District Office and Broward County Environmental Quality Control Board.

8. In addition to the requirements of General Condition 8 of this permit, a written quarterly report shall be submitted to the Department of all opacity exceedances of emission limitations specified in Florida Administrative Code Rules 17-2.250(1) through (4) and 17-2.600(5)(b)1. The report shall state the cause, period of noncompliance, and steps taken for corrective action and/or prevention of recurrence. If the opacity level cannot be determined due to an opacity monitor malfunction or for any other reason, the report shall state the cause, duration and action taken - all recorded data shall be maintained on file by Florida Power & Light for no less than two years and made available to the Department upon request.

9. All present and future variance orders or rule changes which are applicable to this source take precedence over any affected condition of this permit.

10. Burning of used oil meeting EPA specifications (40 CFR S266.40) and generated from FPL operations shall be permitted under the following conditions:

(a) Each batch of used oil to be burned shall be sampled and analyzed for: Arsenic, Chromium, Cadmium, total Halogens, and Lead using EPA/DER or ASTM approved methods. Split samples of the used oil shall be retained for three (3) months after analysis for further testing if necessary.

(b) Results of used oil sampling and analysis performed pursuant to Specific Condition 10 (a) shall be retained by permittee for at least three (3) years and made available for inspection by DER upon request.

(c) An estimate of the total quantity of used oil burned during the applicable calender year shall be included in the Annual Operation Report (AOR) for Air Emissions Sources. The permittee will submit with the AOR a summary of the range of values for each constituent analyzed pursuant to Specific Condition 10(a).

DER Air Operating Permit No. AO-06-143213

Dear Ms. Brooks:

As we discussed by phone, this is confirmation that we will accept the above captioned permit. As we also discussed, this also clarifies that this unit is not equipped with a transmissometer. Thus, the reference to such in Specific Condition 8 of the permit does not apply to this unit.

I am attaching a copy of this letter to our copy of the permit in question and hereby request that you attach this letter to your file copy so we have consistent records. This will prevent potential confusion.

If you have any questions, please call me at 694-3648.

Sincerely,

Elsa A. Bishop
Environmental Coordinator

RE: **Lauderdale Plant, Unit No. 5**
DER Air Operating Permit No. AO-06-143213
Specific Condition No. 4 - Emissions Compliance Testing

Dear Ms. Brooks:

As we discussed by phone on Friday, May 27, 1988 and today, this letter is written in confirmation of the Department's agreement to allow emissions compliance testing of the above-captioned unit while firing a combination of fuel oil and natural gas with an equivalent sulfur content of one percent. All other testing conditions remain as written.

I am attaching a copy of this letter to our copy of the permit in question and hereby request that you attach this letter to your file copy so we have consistent records. This will prevent potential confusion.

If you have any questions, please call me at (407) 694-3648.

NOTICE OF PERMIT

Broward County
AP - Florida Power & Light Co. -
Lauderdale Gas Turbines Nos. 1-12

Mr. T. R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light
P. O. Box 14000
Juno Beach, FL 33408

Dear Mr. Fair:

Enclosed is Permit Number AO 06-148760 to operate an air pollution source issued pursuant to Section 403.087, Florida Statutes.

Persons whose substantial interests are affected by this permit have a right, pursuant to Section 120.57, Florida Statutes, to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapters 17-103 and 28-5.201, FAC, and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400, within fourteen (14) days of receipt of this notice. Failure to file a petition within the fourteen (14) days constitutes a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, Florida Statutes. This permit is final and effective on the date filed with the Clerk of the Department unless a petition is filed in accordance with this paragraph or unless a request for extension of time in which to file a petition is filed within the time specified for filing a petition and conforms to Rule 17-103.070, FAC. Upon timely filing of a petition or a request for an extension of time this permit will not be effective until further Order of the Department.

When the Order (Permit) is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the Final Order is filed with the Clerk of the Department.

Lauderdale Gas Turbines Nos. 1-12

This permit is issued under the provisions of Chapter 403, Florida Statutes, and Florida Administrative Code Rule 17-2, and in conformance with all existing regulations of the Florida Department of Environmental Regulation. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the Department and made a part hereof and specifically described as follows:

OPERATE: An air pollution source consisting of gas turbine Units 1 through 12 with a 486 MW gross capacity burning natural gas and/or No. 2 distillate oil, exhausting through seperate stacks 45 feet above ground level. The heat input rate per unit is 7020 mm BTU/hr.

IN ACCORDANCE WITH: Application for Renewal of Permit to Operate Air Pollution Sources received April 26, 1988 as modified by letter May 9, 1988, Application to Operate Air Pollution Sources dated October 7, 1977 and letter dated June 13, 1983 (none are attached).

LOCATED AT: Griffin Road, Dania, Broward County, Florida.

TO SERVE: An electric service utility facility (SIC # 4911)

SUBJECT TO: General Conditions 1-15 and Specific Conditions 1-5.

* This permit is a renewal of AO 06-62932 issued June 27, 1983.

PERMIT/CERTIFICATION NUMBER: AO 06-148760 *
DATE OF ISSUE:
EXPIRATION DATE: June 30, 1993

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations, and restrictions set forth herein are "Permit Conditions" and as such are binding upon the permittee and enforceable pursuant to the authority of Sections 403.161, 403.727, or 403.859 through 403.861, Florida Statutes. The permittee is hereby placed on notice that the Department will review this permit periodically and may initiate enforcement action for any violation of the "Permit Conditions" by the permittee, its agents, employees, servants or representatives.

2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action by the Department.

3. As provided in Subsections 403.087(6) and 403.722(5), Florida Statutes, the issuance of this permit does not convey any vested rights or any exclusive privileges. Nor does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations. This permit does not constitute a waiver of or approval of any other Department permit that may be required for other aspects of the total project which are not addressed in the permit.

4. This permit conveys no title to land or water, does not constitute state recognition or acknowledgement of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the state. Only the Trustees of the Internal Improvement Trust Fund may express state opinion as to title.

5. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, plant or aquatic life or property and penalties therefore caused by the construction or operation of this permitted source, nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department.

6. The permittee shall at all times properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed or used by the permittee to achieve compliance with the conditions of this permit, as required by Department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit, and when required by Department rules.

7. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, upon presentation of credentials or other documents as may be required by law, access to the premises, at reasonable times, where the permitted activity is located or conducted for the purpose of:

   a. Having access to and copying any records that must be kept under the conditions of the permit;

   b. Inspecting the facility, equipment, practices, or operations regulated or required under this permit; and

   c. Sampling or monitoring any substances or parameters at any location reasonably necessary to assure compliance with this permit or Department rules.

   Reasonable time may depend on the nature of the concern being investigated.

8. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in the permit, the permittee shall immediately notify and provide the Department with the following information:

   a. a description of and cause of noncompliance; and

   b. the period of noncompliance, including exact dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken to reduce, eliminate, and prevent recurrence of the noncompliance.

PERMITTEE:
Mr. D. R. Fair, Manager
Environmental Permitting & Programs

I.D. NUMBER: [illegible]/BRO/06/0037/03
PERMIT/CERTIFICATION NUMBER: [illegible] 06-148760 *
DATE OF ISSUE: [illegible]
EXPIRATION DATE: June 30, 1993

GENERAL CONDITIONS:

The permittee shall be responsible for any and all damages which may result and may be subject to enforcement action by the Department for penalties or revocation of this permit.

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, which are submitted to the Department, may be used by the Department as evidence in any enforcement case arising under the Florida Statutes or Department rules, except where such use is proscribed by Sections 403.73 and 403.111, Florida Statutes.

10. The permittee agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance, provided however, the permittee does not waive any other rights granted by Florida Statutes or Department rules.

11. This permit is transferable only upon Department approval in accordance with Florida Administrative Code Rules 17-4.12 and 17-30.30, as applicable. The permittee shall be liable for any noncompliance of the permitted activity until the transfer is approved by the Department.

12. This permit is required to be kept at the work site of the permitted activity during the entire period of construction or operation.

13. This permit also constitutes:

( ) Determination of Best Available Control Technology (BACT)
( ) Determination of Prevention of Significant Deterioration (PSD)
( ) Certification of Compliance with State Water Quality Standards (Section 401, PL 92-500)
( ) Compliance with New Source Performance Standards

14. The permittee shall comply with the following monitoring and record keeping requirements:

a. Upon request, the permittee shall furnish all records and plans required under Department rules. The retention period for all records will be extended automatically, unless otherwise stipulated by the Department, during the course of any unresolved enforcement action.

b. The permittee shall retain at the facility or other location designated by this permit records of all monitoring information (including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation), copies of all reports required by this permit, and records of all data used to complete the application for this permit. The time period of retention shall be at least three years from the date of the sample, measurement, report or application unless otherwise specified by Department rule.

c. Records of monitoring information shall include:

- the date, exact place, and time of sampling or measurements;
- the person responsible for performing the sampling or measurements;
- the date(s) analyses were performed;
- the person responsible for performing the analyses;
- the analytical techniques or methods used; and
- the results of such analyses.

15. When requested by the Department, the permittee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the permit. If the permittee becomes aware that relevant facts were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be submitted or corrected promptly.

I.D. NUMBER: 06/BRO/06/0037103
PERMIT/CERTIFICATION NUMBER: AO 06-148760 *
DATE OF ISSUE: DEC 6 1988
EXPIRATION DATE: June 30, 1993

SPECIFIC CONDITIONS:

(1) Permitted Fuels:

These sources shall be fired with No. 2 Distillate fuel oil and/or natural gas.

(2) Source Emission Limiting Standards and Compliance Testing Requirements:

POLLUTANT	EMISSION [1] LIMITING STDS.	TESTING FREQUENCY ANNUAL	QUARTERLY	OTHER	TEST [2] METHOD
Visible Emissions	20% Opacity	------	-------	✓ If fuel oil consumption in any unit reaches 23,810 bbls (1,000,000 gal.) in a fiscal year, within that fiscal year*	EPA Method 9

1. - FAC 17-2.610(2)
2. - FAC 17-2.700(1)(d), Table 700-1

* NOTE: Usage may be determined on the basis of proportionate time of operation versus total fuel consumption for the block of 12 units. If fuel consumption testing threshold is achieved in September, then visible emissions testing may be conducted prior to October 31 of the same calendar year.

(3) Compliance Testing Related Requirements:

(a) Notification - FAC 17-2.700(2)(a)5

Notification of scheduled test dates shall be given to the Department Southeast District Office and the Broward County Environmental Quality Control Board at least 15 days prior to testing unless otherwise agreed to by the Department.

(b) Conditions

Testing of emissions should be conducted with the source operating within 10% of its rated capacity. Testing may be conducted at less than 90% of rated capacity; however, if so, subsequent source operation is limited to up to 110% of the test load. Once the unit is so limited, then operation at higher capacities is allowed for purposes of additional compliance testing to regain rated capacity in permit, with prior notification to the Department.

PERMIT/CERTIFICATION NUMBER: [illegible]0 06-148760 *
DATE OF ISSUE: [illegible]
EXPIRATION DATE: June 30, 1993

SPECIFIC CONDITIONS:

(c) Report Submittal - FAC 17-2.700(7)

A copy of the test results shall be submitted to the Department Southeast District Office and the Broward County Environmental Quality Control Board, including formulas with input and output data.

(4) Annual Operations Report - FAC 17-4.14:

On or before March 1 of each calendar year, a completed DER Form 17-1.202(6), Annual Operations Report Form for Air Emissions Sources shall be submitted to the Department Southeast District Office and the Broward County Environmental Quality Control Board, including formulas with input and output data.

(5) Excess Emissions - FAC 17-2.250(1):

Excess emissions resulting from start-up, shut-down or malfunction shall be permitted providing (1) best operational practices to minimize emissions are adhered to and (2) the duration of excess emissions shall be minimized but in no case exceed two hours in any 24-hour period unless specifically authorized by the Department for longer duration.

Dear Mr. Fair:

Enclosed is Permit Number AO 06-148761 to operate an air pollution source issued pursuant to Section 403.087, Florida Statutes.

Persons whose substantial interests are affected by this permit have a right, pursuant to Section 120.57, Florida Statutes, to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapters 17-103 and 28-5.201, FAC, and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400, within fourteen (14) days of receipt of this notice. Failure to file a petition within the fourteen (14) days constitutes a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, Florida Statutes. This permit is final and effective on the date filed with the Clerk of the Department unless a petition is filed in accordance with this paragraph or unless a request for extension of time in which to file a petition is filed within the time specified for filing a petition and conforms to Rule 17-103.070, FAC. Upon timely filing of a petition or a request for an extension of time this permit will not be effective until further Order of the Department.

When the Order (Permit) is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the Final Order is filed with the Clerk of the Department.

POLLUTANT	EMISSION [1] LIMITING STDS.	TESTING FREQUENCY			TEST [2] METHOD
		ANNUAL	QUARTERLY	OTHER	
Visible Emissions	20% Opacity	------	-------	✓ If fuel oil consumption in any unit reaches 23,810 bbls (1,000,000 gal.) in a fiscal year, within that fiscal year*	EPA Method 9

1. - FAC 17-2.610(2)
2. - FAC 17-2.700(1)(d), Table 700-1

* NOTE: Usage may be determined on the basis of proportionate time of operation versus total fuel consumption for the block of 12 units. If fuel consumption testing threshold is achieved in September, then visible emissions testing may be conducted prior to October 31 of the same calendar year.

(3) Compliance Testing Related Requirements:

(a) Notification - FAC 17-2.700(2)(a)5

Notification of scheduled test dates shall be given to the Department Southeast District Office and the Broward County Environmental Quality Control Board at least 15 days prior to testing unless otherwise agreed to by the Department.

(b) Conditions

Testing of emissions should be conducted with the source operating within 10% of its rated capacity. Testing may be conducted at less than 90% of rated capacity; however, if so, subsequent source operation is limited to up to 110% of the test load. Once the unit is so limited, then operation at higher capacities is allowed for purposes of additional compliance testing to regain rated capacity in permit, with prior notification to the Department.

Florida Power & Light

I.D. NUMBER: 50/BRO/06/0037/04
PERMIT/CERTIFICATION NUMBER: AO 06-148761 *
DATE OF ISSUE: AUG 05 1988
EXPIRATION DATE: June 30, 1993

SPECIFIC CONDITIONS:

(c) Report Submittal - FAC 17-2.700(7)

A copy of the test results shall be submitted to the Department Southeast District Office and the Broward County Environmental Quality Control Board, including formulas with input and output data.

(4) Annual Operations Report - FAC 17-4.14:

On or before March 1 of each calendar year, a completed DER Form 17-1.202(6), Annual Operations Report Form for Air Emissions Sources shall be submitted to the Department Southeast District Office and the Broward County Environmental Quality Control Board, including formulas with input and output data.

(5) Excess Emissions - FAC 17-2.250(1):

Excess emissions resulting from start-up, shut-down or malfunction shall be permitted providing (1) best operational practices to minimize emissions are adhered to and (2) the duration of excess emissions shall be minimized but in no case exceed two hours in any 24-hour period unless specifically authorized by the Department for longer duration.

RE: Modification to Permit Number IO 06-158722

Dear Mr. Fair:

Your request to amend Specific Condition 4 of the referenced permit issued on January 30, 1989 is hereby approved. In order to clarify our water quality standards Permit Condition 4 shall now read as follows:

4. The permittee shall maintain the quality and quantity of effluent discharged such that the water quality standards of the State of Florida are not exceeded. These shall include the following parameters:

A. Surface Water Quality Standards

Parameter	Water Quality Standards
Discharge temperature	In accordance with FAC Rule 17-3.050
Temperature Rise	In accordance with FAC Rule 17-3.050

B. Groundwater Quality Standards

Parameter	Water Quality Standards
Chromium (total)	0.05 mg/l
Lead	0.05 mg/l
Mercury	0.002 mg/l
Nitrate (as N)	10.0 mg/l
Sodium	160 mg/l
Silver	0.05 mg/l
Arsenic	0.05 mg/l

Sampling and analysis of the effluent shall be conducted in accordance with FAC Rule 17-4.246, as per the attached schedule starting upon receipt of this permit and reports of the analysis shall be submitted to the Department by the 15th day of the succeeding month. Additional sampling and analyses may be required as conditions warrant in order to further assess the water quality.

Please note that compliance with the following secondary groundwater standards is not required unless the Department has made a determination pursuant to FAC Rule 17-28.700(8):

Parameter	Water Quality Standards
Copper	1.0 mg/l
Iron	0.3 mg/l
Zinc	5.0 mg/l
pH	6.5 S.U. (minimum)
Chloride	250 mg/l
Manganese	0.05 mg/l
Fluoride	0.5 mg/l

All other conditions of the permit remain unchanged and this letter shall be attached to the original permit. Should you have any questions, please call Mr. Vivek Kamath at 407/964-9668.

Sincerely,

J. Scott Benyon
Deputy Assistant Secretary

NOTICE OF PERMIT

Broward County
IW - FP&L Lauderdale Plant

Mr.T.R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light Company
P.O. Box 14000
Juno Beach, Fl. 33408

Dear Mr. Fair:

Enclosed is Permit Number IO 06-158722 to operate an Industrial Wastewater treatment/disposal system at the Lauderdale Plant, issued pursuant to Section 403.087, Florida Statutes.

Persons whose substantial interests are affected by this permit have a right, pursuant to Section 120.57, Florida Statutes, to petition for an administrative determination (hearing) on it. The petition must conform to the requirements of Chapters 17-103, FAC, and must be filed (received) in the Department's Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400, within fourteen (14) days of receipt of this notice. Failure to file a petition within the fourteen (14) days constitutes a waiver of any right such person has to an administrative determination (hearing) pursuant to Section 120.57, Florida Statutes. This permit is final and effective on the date filed with the Clerk of the Department unless a petition is filed in accordance with this paragraph or unless a request for extension of time in which to file a petition is filed within the time specified for filing a petition and conforms to Rule 17-103.070, FAC. Upon timely filing of a petition or a request for an extension of time this permit will not be effective until further Order of the Department.

When the Order (Permit) is final, any party to the Order has the right to seek judicial review of the Order pursuant to Section 120.68, Florida Statutes, by the filing of a Notice of Appeal pursuant to Rule 9.110, Florida Rules of Appellate Procedure, with the Clerk of the Department in the Office of General Counsel, 2600 Blair Stone Road, Tallahassee, FL 32399-2400; and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate District Court of Appeal. The Notice of Appeal must be filed within 30 days from the Final Order is filed with the Clerk of the Department.

Mr. T.R. Fair, Manager
Environmental Permitting & Programs
Florida Power & Light Co.
Post Office Box 14000
Juno Beach, Florida 33408

I.D. NUMBER: 5006P00657
PERMIT/CERTIFICATION NUMBER: IO 06-158722
DATE OF ISSUE: JAN 30 1989
EXPIRATION DATE: JAN 30 1994
COUNTY: Broward
LATITUDE/LONGITUDE: 26°03'45"N/80°11'40"W
SECTION/TOWNSHIP/RANGE: 30/T50S/R42E
PROJECT: Lauderdale Steam Electric Plant

This permit is issued under the provisions of Chapter 403, Florida Statutes, and Florida Administrative Code Rule(s) 17-4 and 17-6. The above named permittee is hereby authorized to perform the work or operate the facility shown on the application and approved drawing(s), plans, and other documents attached hereto or on file with the Department and made a part hereof and specifically described as follows:

OPERATE: A liquid industrial waste treatment and disposal system for treating and disposing of industrial waste from the generation of electricity by steam. A volume of 343 MGD of once through cooling water is discharging to the south fork of New River Canal, classified as Class III surface waters,with a Zone of Mixing in accordance with Section 17-2.444, F.A.C. and as described in Specific Condition 3. A second volume of liquid waste consisting of wash waters from stacks, air preheater, economizer, boiler fireside and from boiler tube cleaning operations is discharging to two settling basins (B1A and B1B) each with a capacity of 0.259 MGAL and a 1.9 MGAL evaporation/percolation pond to Class G-II Groundwaters. Water treatment wastewater, floor and storm drains and boiler blowdown are discharged to the on-site stub canal (evaporation/percolation Pond). The Zone of Discharge for groundwater discharge shall be in accordance with Section 17-28.700, F.A.C. and as described in Specific Condition No. 2.

IN ACCORDANCE WITH: Your application to renew Permit No. IO06-78916, submitted on December 23, 1988 and additional information submitted on January 6, 1989.

LOCATED AT: S.W. 42 Street, 2 miles west of Ravenswood Road, Fort Lauderdale, Florida 33314.

TO SERVE: A steam electric power plant (SIC 4911).

SUBJECT TO: General Conditions 1-15 and Specific Conditions 1-10.

DER Form 17-1.201(5)
Effective November 30, 1982

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations and restrictions set forth in this permit, are "permit conditions" and are binding and enforceable pursuant to Sections 403.141, 403.727, or 403.859 through 403.861, F.S. The permittee is placed on notice that the Department will review this permit periodically and may initiate enforcement action for any violation of these conditions.

2. This permit is valid only for the specific processes and operations applied for and indicated in the approved drawings or exhibits. Any unauthorized deviation from the approved drawings, exhibits, specifications, or conditions of this permit may constitute grounds for revocation and enforcement action by the Department.

3. As provided in subsections 403.087(6) and 403.722(5), F.S., the issuance of this permit does not convey any vested rights or any exclusive privileges. Neither does it authorize any injury to public or private property or any invasion of personal rights, nor any infringement of federal, state, or local laws or regulations. This permit is not a waiver of or approval of any other Department permit that may be required for other aspects of the total project which are not addressed in this permit.

4. This permit conveys no title to land or water, does not constitute State recognition or acknowledgement of title, and does not constitute authority for the use of submerged lands unless herein provided and the necessary title or leasehold interests have been obtained from the State. Only the Trustees of the Internal Improvement Trust Fund may express State opinion as to title.

5. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal, or plant life, or property caused by the construction or operation of this permitted source, or from penalties therefore; nor does it allow the permittee to cause pollution in contravention of Florida Statutes and Department rules, unless specifically authorized by an order from the Department.

6. The permittee shall properly operate and maintain the facility and systems of treatment and control (and related appurtenances) that are installed and used by the permittee to achieve compliance with the conditions of this permit, are required by Department rules. This provision includes the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit and when required by Department rules.

7. The permittee, by accepting this permit, specifically agrees to allow authorized Department personnel, upon presentation of credentials or other documents as may be required by law and at reasonable times, access to the premises where the permitted activity is located or conducted to:

(a) Have access to and copy any records that must be kept under conditions of the permit;

(b) Inspect the facility, equipment, practices, or operations regulated or required under this permit; and

(c) Sample or monitor any substances or parameters at any location reasonable necessary to assure compliance with this permit or Department rules.

Reasonable time may depend on the nature of the concern being investigated.

8. If, for any reason, the permittee does not comply with or will be unable to comply with any condition or limitation specified in this permit, the permittee shall immediately provide the Department with the following information:

(a) A description of and cause of noncompliance; and

(b) The period of noncompliance, including dates and times; or, if not corrected, the anticipated time the noncompliance is expected to continue, and steps being taken tor educe, eliminate, and prevent recurrence of the noncompliance. The permittee shall be responsible for any and all damages which may result anf may be subject to enforcement action by the Department for penalties or for revocation of this permit.

9. In accepting this permit, the permittee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source which are submitted to the Department may be used by the Department as evidence in any enforcement case involving the permitted source arising under the Florida Statutes or Department rules, except where such use is prescribed by Section 403.111 and 403.73, F.S. Such evidence shall only be used to the extent it is consistent with the Florida Rules of Civil Procedure and appropriate evidentiary rules.

GENERAL CONDITIONS:

10. The permittee agrees to comply with changes in Department rules and Florida Statutes after a reasonable time for compliance; provided, however, the permittee does not waive any other rights granted by Florida Statutes or Department rules.

11. This permit is transferable only upon Department approval in accordance with Rule 17-4.120 and 17-30.300, F.A.C., as applicable. The permittee shall be liable for any non-compliance of the permitted activity until the transfer is approved by the Department.

12. This permit or a copy thereof shall be kept at the work site of the permitted activity.

13. This permit also constitutes:

( ) Determination of Best Available Control Technology (BACT)

( ) Determination of Prevention of Significant Deterioration (PSD)

( ) Certification of compliance with state Water Quality Standards (Section 401, PL 92-500)

( ) Compliance with New Source Performance Standards

14. The permittee shall comply with the following:

(a) Upon request, the permittee shall furnish all records and plans required under Department rules. During enforcement actions, the retention period for all records will be extended automatically unless otherwise stipulated by the Department.

(b) The permittee shall hold at the facility or other location designated by this permit records of all monitoring information (including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation) required by the permit, copies of all reports required by this permit, and records of all data used to complete the application for this permit. These materials shall be retained at least three years from the date of the sample, measurement, report, or application unless otherwise specified by Department rule.

(c) Records of monitoring information shall include:

1. the date, exact place, and time of sampling or measurements;
2. the person responsible for performing the sampling or measurements;
3. the dates analyses were performed;
4. the person responsible for performing the analyses;
5. the analytical techniques or methods used;
6. the results of such analyses.

15. When requested by the Department, the permittee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the permit. If the permittee becomes aware the relevant facts were not submitted or were incorrect in the permit application or in any report to the Department, such facts or information shall be corrected promptly.

16. In the case of an underground injection control permit, the following permit conditions also shall apply:

(a) All reports or information required by the Department shall be certified as being true, accurate and complete.

(b) Reports of compliance or noncompliance with, or any progress reports on, requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(c) Notification of any noncompliance which may endanger health or the environment shall be reported verbally to the Department within 24 hours and again within 72 hours, and a final written report provided within two weeks.

1. The verbal reports shall contain any monitoring or other information which indicate that any contaminant may endanger an underground source of drinking water and any noncompliance with a permit condition or malfunction of the injection system which may cause fluid migration into or between underground sources of drinking water.

GENERAL CONDITIONS:

2. The written submission shall contain a description of and a discussion of the cause of the noncompliance and, if it has not been corrected, the anticipated time the noncompliance is expected to continue, the steps being taken to reduce, eliminate, and prevent recurrence of the noncompliance and all information required by Rule 17-28.230(4)(b), F.A.C.

(d) The Department shall be notified at least 180 days before conversion or abandonment of an injection well, unless abandonment within a lesser period of time is necessary to protect waters of the state.

17. The following conditions also shall apply to a hazardous waste facility permit.

(a) The following reports shall be submitted to the Department:

1. Manifest discrepancy report. If a significant discrepancy in a manifest is discovered, the permittee shall attempt to rectify the discrepancy. If not resolved within 15 days after the waste is received, the permittee shall immediately submit a letter report, including a copy of the manifest, to the Department.

2. Unmanifested waste report. The permittee shall submit an unmanifested waste report to the Department within 15 days of receipt of unmanifested waste.

3. Annual report. An annual report covering facility activities during the previous calendar year shall be submitted pursuant to Chapter 17-30, F.A.C.

(b) Notification of any noncompliance which may endanger health or the environment, including the release of any hazardous waste that may endanger public drinking water supplies or the occurence of a fire or explosion from the facility which could threaten the environment or human health outside the facility, shall be reported verbally to the Department within 24 hours, and a written report shall be provided within 5 days. The verbal report shall include the name, address, I.D. number, and telephone number of the facility, its owner or operator, the name and quantity of materials involved, the extent of any injuries, an assessment of actual or potential hazards, and the estimated quantity and disposition of recovered material. The written submission shall contain:

1. A description and cause of the noncompliance.

2. If not corrected, the expected time of correction, and the steps being taken to reduce, eliminate, and prevent recurrence of the noncompliance.

(c) Reports of compliance or noncompliance with, or any progress reports on, requirements in any compliance schedule shall be submitted no later than 14 days after each schedule date.

(d) All reports or information required by the Department by a hazardous waste permittee shall be signed by a person authorized to sign a permit application.

PERMITTEE:
Mr. T.R. Fair, Manager
Florida Power & Light

I.D. NUMBER: 5006P00657
PERMIT/CERTIFICATION NUMBER: IO 06-158722
DATE OF ISSUE:
EXPIRATION DATE: JAN 30 1989
JAN 3[illegible]

SPECIFIC CONDITIONS:

1. The water quality at the perimeter of the Zone of Discharge and the Mixing Zone shall be consistent at all times with the water quality standards set forth in Chapter 17-3, Florida Administrative Code (F.A.C.). Should conditions of the waters within the Zone of Discharge or the Mixing Zone warrant, the permittee may be required by the Department to upgrade, reduce or cease the discharge of effluent into the Zone of Discharge and adopt an alternate method of disposal.

2. The Zone of Discharge shall be in accordance with Section 17-28.700, and extend to the property limits as described in drawing No. C-27338-5 (not attached).

3. The Mixing Zone shall be in accordance with Section 17-4.244 F.A.C. and will extend from the discharge point and be in the direction of normal flow (easterly) for a distance of 800 meters.

4. The permittee shall maintain the quality and quantity of the effluent discharged such that the water quality standards of the State of Florida are not exceeded. These shall include the following parameters:

A. Surface Water Quality Standards

Parameter	Water Quality Standards
(1) Discharge temperature	(In accordance with Section 17-3.050, F.A.C.).
(2) Temperature Rise	(In accordance with Section 17-3.050, F.A.C.).

B. Groundwater Quality Standards

Parameter	Water Quality Standards
(1) Copper	1.0 mg/l
(2) Iron	0.3 mg/l
(3) Chromium (total)	0.05 mg/l
(4) Zinc	5.0 mg/l
(5) Lead	0.05 mg/l
(6) Mercury	0.002 mg/l
(7) Nitrate	10.0 mg/l
(8) pH	6.5 S.U. (min.)
(9) Chloride	250 mg/l

See Modification Dated February 17, 19[illegible] Specific Condition Number 4

Sampling and analysis of the effluents and monitoring wells shall be conducted in accordance with Section 17-4.246, F.A.C., as per the attached schedule starting upon receipt of this permit and reports on the analysis shall be submitted to the Department by the 15th of the succeeding month. Additional sampling and analyses may be required as conditions warrant in order to further assess the water quality.

5. There shall be no discharge of free available chlorine or total residual chlorine. Floating solids or visible foam shall not be discharged in any quantities that could create a nuisance.

6. No wastewater shall be allowed to deliberately bypass the treatment facility, except in cases of emergency, without the prior approval of the Department. The Department shall be promptly notified, in writing, of the emergency and all information as to the cause of the problem and the corrective measures to be taken to prevent its recurrence.

7. The treatment facilities are to be operated in such a manner that the maximum level of efficiency is maintained at all times.

8. Waste sludge or other solid waste shall not be discharged into the waters of the State either directly or indirectly. Records of the amount of solid waste generated and the method of disposal shall be maintained on-site and made available to the Department staff.

SFWMD CONSUMPTIVE USE PERMITS

FORM PA-31
REV. 11/79

South Florida
Water Management District
WATER USE PERMIT NO. 06-00503-W

(NON-ASSIGNABLE)

DATE ISSUED: December 15, 1983 EXPIRATION DATE December 15, 1993

AUTHORIZING: THE CONTINUATION OF AN EXISTING USE OF GROUNDWATER FROM THE BISCAYNE AQUIFER FOR INDUSTRIAL USE WITH AN ANNUAL ALLOCATION OF 135.16 MILLION GALLONS.

LOCATED IN: BROWARD COUNTY, SECTION 30 TWP. 50S RGE. 42E

ISSUED TO: Florida Power and Light Company
(Lauderdale Steam Electric Plant)
P. O. Box 14000
Juno Beach, Florida 33408

This Permit is issued pursuant to Application for Permit No. 09133-A dated September 7, 19 83 for the Use of Water as specified above and subject to the Special Conditions set forth below. Said application, including all plans and specifications attached thereto, is by reference made a part hereof.

Upon written notice to the permittee, this permit may be temporarily modified, or restricted under a Declaration of Water Shortage or a Declaration of Emergency due to Water Shortage in accordance with provisions of Ch. 373, Fla. Statutes, 1973 and applicable rules and regulations of the South Florida Water Management District.

This Permit may be permanently or temporarily revoked, in whole or in part, for the violation of the conditions of the permit or for the violation of any provision of the Water Resources Act and regulations thereunder.

This Permit does not convey to permittee any property rights nor any privileges other than those specified herein, nor relieve the permittee from complying with any law, regulation, or requirement affecting the rights of other bodies or agencies.

SPECIAL CONDITIONS ARE AS FOLLOWS:

SEE SHEETS 2 AND 3 OF 3 - 12 GROUNDWATER SPECIAL CONDITIONS.

SOUTH FLORIDA WATER MANAGEMENT DISTRICT, BY ITS GOVERNING BOARD

By Thomas E. Huser
Assistant Secretary

10.4-58

GROUNDWATER SPECIAL CONDITIONS

1. APPLICATION FOR A PERMIT MODIFICATION MAY BE MADE AT ANY TIME.

2. PERMIT SHALL EXPIRE 10 YEARS FROM THE DATE OF ISSUANCE.

3. MAXIMUM DAY PUMPAGE SHALL NOT EXCEED 0.432 MG.

4. IN THE EVENT OF A DECLARED WATER SHORTAGE, WATER WITHDRAWAL REDUCTIONS SHALL BE MADE AS SPECIFIED BY THE DISTRICT.

5. USE CLASSIFICATION IS INDUSTRIAL.

6. SOURCE CLASSIFICATION IS GROUNDWATER FROM THE BISCAYNE AQUIFER.

7. PERMITTEE SHALL RECORD PUMPAGE ON A DAILY BASIS. THE RECORDED DATA SHALL BE SUBMITTED TO THE DISTRICT EVERY MONTH STARTING THE MONTH FOLLOWING BOTH PERMIT ISSUANCE AND INITIATION OF WATER USE.

8. THE DIRECTOR OF THE RESOURCE CONTROL DEPARTMENT OR HIS AUTHORIZED REPRESENTATIVES SHALL BE PERMITTED TO ENTER, INSPECT AND OBSERVE THE INDUSTRIAL WATER USE UPON DISTRICT STAFF IDENTIFICATION IN ORDER TO DETERMINE COMPLIANCE WITH SPECIAL CONDITIONS.

9. PERMITTEE SHALL MITIGATE ANY ADVERSE IMPACT CAUSED BY WITHDRAWALS ON LEGAL USES WHICH EXISTED AT THE TIME OF PERMIT APPLICATION. DISTRICT RESERVES THE RIGHT TO CURTAIL FUTURE PUMPAGE RATES IF PUMPAGE CAUSES AN ADVERSE IMPACT ON LEGAL USES OF WATER WHICH EXISTED AT THE TIME OF APPLICATION. ADVERSE IMPACTS ARE EXEMPLIFIED BY BUT NOT LIMITED TO THE FOLLOWING: 1) REDUCTION IN WELL WATER LEVELS RESULTING IN A REDUCTION OF 10% IN THE ABILITY OF AN ADJACENT WELL TO PRODUCE WATER (AN ADJACENT WELL MAY BE A DOMESTIC WELL, LAWN IRRIGATION WELL, PUBLIC WATER SUPPLY WELL, ETC.), 2) SIGNIFICANT REDUCTION IN WATER LEVELS IN AN ADJACENT WATER BODY SUCH AS A LAKE, POND, OR A CANAL SYSTEM, RESULTING IN A SIGNIFICANT IMPAIRMENT OF THE USE OF WATER IN THAT WATER BODY, 3) SALINE WATER INTRUSION OR INDUCTION OF POLLUTANTS INTO THE WATER SUPPLY OF AN ADJACENT WATER USE RESULTING IN A SIGNIFICANT REDUCTION IN WATER QUALITY.

10. PERMITTEE SHALL MITIGATE ANY ADVERSE IMPACT ON OFF-SITE LAND USE WHICH EXISTED AT THE TIME OF APPLICATION, AS A CONSEQUENCE OF WITHDRAWALS PERMITTED HEREIN TO THE SATISFACTION OF THE DISTRICT. THE DISTRICT RESERVES THE RIGHT TO CURTAIL FUTURE PUMPAGE RATES IF INCREASED WITHDRAWALS CAUSE AN ADVERSE IMPACT ON LAND USE WHICH EXISTED AT THE TIME OF APPLICATION. ADVERSE IMPACTS ARE EXEMPLIFIED BY BUT NOT LIMITED TO THE FOLLOWING: 1) SIGNIFICANT REDUCTION IN WATER LEVELS IN AN ADJACENT WATER BODY SUCH AS A LAKE, POND OR CANAL SYSTEM WHICH IS NOT BEING USED AS A SOURCE OF WATER; 2) LAND COLLAPSE OR SUBSIDENCE CAUSED BY REDUCTION IN WATER LEVELS; 3) DAMAGE TO CROPS AND OTHER TYPES OF VEGATATION,

THE ELIMINATION OF WHICH WOULD CAUSE FINANCIAL HARM TO THE LANDOWNER.

11. IF ANY CONDITIONS OF THIS PERMIT ARE VIOLATED, THE PERMIT SHALL BE SUBJECT TO REVIEW AND POSSIBLE REVOCATION AND MODIFICATION, OR ENFORCEMENT ACTION.

12. PERMITTEE SHALL NOT CAUSE SIGNIFICANT SALINE WATER INTRUSION. THE DISTRICT RESERVES THE RIGHT TO CURTAIL FUTURE PUMPAGE RATES IF INCREASED WITHDRAWALS CAUSE SIGNIFICANT SALINE WATER INTRUSION.

Florida Power & Light Company
P.O. Box 14000
Juno Beach, FL 33408

Dear Mr. Fair:

SUBJECT: Water Use General Permit: 88-137W
Project: Lauderdale Plant Pavillion
Type of Use: Irrigation
County: Broward; Sec. 30, Twp. 50S, Rge. 42E.
Permittee: Florida Power & Light Company

This letter is to notify you of the District's agency action concerning your Notice of Intent to Use Water. This action is taken pursuant to Rule 40E-20.042 and Chapter 40E-20, Florida Administrative Code. Based on the information provided, District rules have been adhered to and a General Water Use Permit is in effect for this project subject to:

1. Not receiving a filed request for a Chapter 120, Florida Statutes, administrative hearing and

2. The attached Limiting Conditions on Exhibit 1.

This permit is for use of 1200 gallons per day on the average or 4200 gallons per day on a maximum day. Groundwater withdrawals will be from one existing 6-inch X 53-foot Biscayne aquifer well cased to 45 feet and pumped at 250 GPM. Prior to exceeding these quantities, a modification to this permit will be necessary.

This project is for a total of 2 acres, of which 0.5 acres will be irrigated.

EXHIBIT 1

LIMITING CONDITIONS

1. THE PERMITTEE SHALL OBTAIN ALL NECESSARY FEDERAL, STATE AND LOCAL AND SPECIAL DISTRICT AUTHORIZATIONS PRIOR TO THE USE OR WITHDRAWAL OF WATER.

2. IN THE EVENT OF A DECLARED WATER SHORTAGE, WATER WITHDRAWAL REDUCTIONS WILL BE ORDERED BY THE DISTRICT IN ACCORDANCE WITH THE WATER SHORTAGE PLAN, CHAPTER 40E-21, FLORIDA ADMINISTRATIVE CODE.

3. PERMITTEE SHALL MITIGATE TO THE SATISFACTION OF THE DISTRICT ANY ADVERSE IMPACT ON EXISTING LEGAL USES CAUSED BY WITHDRAWALS. WHEN ADVERSE IMPACTS OCCUR, OR ARE IMMINENT, DISTRICT RESERVES THE RIGHT TO CURTAIL WITHDRAWAL RATES. ADVERSE IMPACTS ARE: A) REDUCTION IN WELL WATER LEVELS THAT IMPAIRS THE ABILITY OF AN ADJACENT WELL TO PRODUCE WATER (AN ADJACENT WELL MAY BE DOMESTIC WELL, LAWN IRRIGATION WELL, PUBLIC WATER SUPPLY WELL, ETC.), B) SIGNIFICANT REDUCTION IN LEVELS IN AN ADJACENT WATER BODY SUCH AS A LAKE, POND, WETLAND OR A CANAL SYSTEM, C) SALINE WATER INTRUSION OR INDUCTION OF POLLUTANTS INTO THE WATER SUPPLY OF AN ADJACENT WATER USE, RESULTING IN A SIGNIFICANT REDUCTION IN WATER QUALITY, AND D) CHANGE IN WATER QUALITY THAT CAUSES IMPAIRMENT OR LOSS OF USE OF A WELL OR WATER BODY.

4. PERMITTEE SHALL MITIGATE TO THE SATISFACTION OF THE DISTRICT ANY ADVERSE IMPACT ON EXISTING OFF-SITE LAND USE AS A CONSEQUENCE OF WITHDRAWALS PERMITTED HEREIN. IF INCREASED WITHDRAWALS CAUSE AN ADVERSE IMPACT ON EXISTING LAND USE THE DISTRICT RESERVES THE RIGHT TO CURTAIL FUTURE WITHDRAWAL RATES. ADVERSE IMPACTS ARE: A) SIGNIFICANT REDUCTION IN WATER LEVELS IN AN ADJACENT WATER BODY (SUCH AS A LAKE, POND, WETLAND OR A CANAL SYSTEM), B) LAND COLLAPSE OR SUBSIDENCE CAUSED BY REDUCTION IN WATER LEVELS, C) DAMAGE TO CROPS AND OTHER VEGETATION, CAUSING FINANCIAL HARM TO THE LANDOWNER, AND D) DAMAGE TO HABITAT OF RARE, ENDANGERED OR THREATENED SPECIES.

5. PERMITTEE SHALL NOT REFUSE IMMEDIATE ENTRY OR ACCESS TO ANY AUTHORIZED REPRESENTATIVE OF THE DISTRICT WHO REQUESTS ENTRY FOR PURPOSES OF INSPECTION AND PRESENTS APPROPRIATE CREDENTIALS.

6. IF ANY CONDITION OF THE PERMIT IS VIOLATED, THE PERMIT SHALL BE SUBJECT TO REVIEW AND POSSIBLE MODIFICATION, ENFORCEMENT ACTION, OR REVOCATION.

7. APPLICATION FOR A PERMIT MODIFICATION MAY BE MADE AT ANY TIME.

8. THE PERMIT DOES NOT CONVEY ANY PROPERTY RIGHT TO THE PERMITTEE, NOR ANY RIGHTS AND PRIVILEGES OTHER THAN THOSE SPECIFIED IN THE PERMIT AND CHAPTER 40E-2, F.A.C.

FORM 0537
10-87

South Florida Water Management District
GENERAL PERMIT
NOTICE OF RIGHTS

This Notice of Rights is intended to inform the recipient of the administrative and judicial review which may be available as mandated by section 120.60(3), Florida Statutes. Be advised that although this notice is intended to be comprehensive, the review procedures set forth herein have been the subject of judicial construction and interpretation which may affect the administrative of judicial review available. Recipients are therefore advised to become familiar with Chapters 120 and 373, Florida Statutes, and the judicial interpretation of the provisions of these chapters.

1. If a substantially affected person objects to the staff's recommendation, that person has the right to request an administrative hearing on the proposed agency action. The substantially affected person may request either a formal or an informal hearing, as set forth below. Failure to comply with the prescribed time periods shall constitute a waiver of the right to a hearing.

2. If a substantially affected person believes a genuine issue of material fact is in dispute, that person may request a formal hearing pursuant to section 120.57(1), Florida Statutes, by filing a petition not later than:
   a. IF NOTICE OF THE APPLICATION WAS PUBLISHED BY THE APPLICANT, within fourteen (14) days after mailing of the proposed agency action or
   b. IF NOTICE OF THE APPLICATION WAS NOT PUBLISHED, within fourteen days after receipt of actual notice.

   The request for a section 120.57(1), F.S., formal hearing must comply with the requirements of Rule 40E-1.521, Florida Administrative Code, a copy of which is attached. Petitions are deemed filed upon receipt by the District. Failure to substantially comply with the provisions of Rule 40E-1.521, Florida Administrative Code, shall constitute a waiver of the right to a 120.57(1) hearing. If a petition for administrative hearing is not timely filed, the staff's proposed agency will automatically mature into final agency action.

3. If a substantially affected person believes that no issues of material fact are in dispute, that person may request an informal hearing pursuant to section 120.57(2), F.S., by filing a petition for hearing not later than:
   a. IF NOTICE OF THE APPLICATION WAS PUBLISHED BY THE APPLICANT, within fourteen (14) days after mailing of the proposed agency action or
   b. IF NOTICE OF THE APPLICATION WAS NOT PUBLISHED, within fourteen days after receipt of actual notice.

   A request for informal hearing shall be considered as a waiver of the right to request a formal section 120.57(1), F.S., hearing. A request for a section 120.57(1), F.S., formal hearing not in substantial compliance with the provisions of rule 40E-1.521, F.A.C., may be considered by the District as a request for informal hearing. If a petition for administrative hearing is not timely filed, the staff's proposed agency action will automatically mature into final agency action.

4. Pursuant to section 373.114, Florida Statutes, a party to the proceeding below may seek review of a Final Order rendered on the permit application before the Land and Water Adjudicatory Commission, as provided therein. Review under this section is initiated by filing a request for review with the Land and Water Adjudicatory Commission and serving a copy on the Department of Environmental Regulation and any person named in the Order within 20 days after rendering of the District's Order. However, when the order to be reviewed has statewide or regional significance, as determined by the Land and Water Adjudicatory Commission within 60 days after receipt of a request for review, the commission may accept a request for review from any affected person within 30 days after the rendering of the order. Review under section 373.114, Florida Statutes, is limited solely to a determination of consistency with the provisions and purposes of Chapter 373, Florida Statutes. This review is appellate in nature and limited to the record below.

5. A party who is adversely affected by final agency action on the permit application is entitled to judicial review in the District Court of Appeal pursuant to section 120.68, Florida Statutes, as provided therein. Review under section 120.68, Florida Statutes in the District Court of Appeal is initiated by filing a petition in the appropriate District Court of Appeal in accordance with Florida rule of appellate Procedure 9.110. The Notice of Appeal must be filed within 30 days of the final agency action.

6. Section 373.617(2), Florida Statutes, provides:

   > Any person substantially affected by a final action of any agency with respect to a permit may seek review within 90 days of the rendering of such decision and request monetary damages and other relief in the circuit court in the judicial circuit in which the affected property is located; however, circuit court review shall be confined solely to determining whether final agency action is an unreasonable exercise of the state's police power constituting a taking without just compensation. Review of final agency action for the purpose of determining whether the action is in accordance with existing statutes or rules and based on component substantial evidence shall proceed in accordance with Chapter 120.

7. Please be advised that exhaustion of administrative remedies is generally a prerequisite to appeal to the District Court of Appeal or the seeking of Circuit Court review of final agency action by the District on the permit application. There are, however, exceptions to the exhaustion requirement. The applicant is advised to consult the case law as to the requirements of exhaustion exceptions.

40E-1.521 Initiation of Formal Proceedings.

(1) Initiation of formal proceedings shall be made by petition to the District. The term petition as used herein includes any application or other document which expresses a request for formal proceedings. Each petition should be printed, typewritten or otherwise duplicated in legible form on white paper or standard legal size. Unless printed, the impression shall be on one side of the paper only and lines shall be double-spaced and indented.

(2) All petitions filed under these rules shall contain:

(a) The name and address of the District and the District's file or identification number, if known;

(b) The name and address of the petitioner or petitioners;

(c) An explanation of how each petitioner's substantial interests will be affected by the District's determination;

(d) A statement of when and how petitioner received notice of the District's decision or intent to render a decision;

(e) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;

(f) A concise statement of the ultimate facts which petitioner believes entitle petitioner to the relief sought as well as the rules and statutes which support petitioner's claim for relief;

(g) A demand for the relief to which the petitioner deems himself entitled; and

(h) Other information which the petitioner contends is material.

(3) Upon receipt of a petition for formal proceedings, the District shall review the petition for the degree of compliance with subsection (2) and shall accept those petitions in substantial compliance therewith which have been timely filed and which state a dispute which is within the jurisdiction of the District to resolve. If accepted, the District shall designate the presiding officer. The District shall promptly give written notice to all parties of the action taken on the petition, and shall state with particularity its reasons therefor.

(4) If the District designates a Hearing Officer assigned by the Division of Administrative Hearings as the presiding officer, the District Clerk shall forward the petition and all materials filed with the District to the Division of Administrative Hearings, and shall notify all parties of its action.

AIR LICENSE

LICENSEE: Florida Power & Light Co.

LICENSE NO. AO-42503R-1
DATE OF ISSUE: December 4, 1987
EXPIRATION DATE: December 31, 1989

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations and restrictions set forth herein are accepted by the licensee and enforceable by the EQCB pursuant to Chapter 27 of the Broward County Environmental Quality Control Board (EQCB) Code. The EQCB will review this license periodically and may revoke the license, initiate administrative and/or judicial action for any violation of the conditions by the licensee, its agents, employees, servants or representatives.

2. This license is valid only for the specific uses set forth in the license application and any deviation from the approved uses may constitute grounds for revocation and enforcement action by the EQCB.

3. In the event the licensee is temporarily unable to comply with any of the conditions of the license, the licensee shall notify the PCO within 12 hours. Within 5 working days of the event, the licensee shall submit a written report to the PCO that describes the incident, its cause, the measures being taken to correct the problem and prevent its reoccurrence, the owner's intention toward repair, replacement, and reconstruction of destroyed facilities, and a schedule of events leading toward operation within the license condition.

4. The issuance of this license does not convey any vested rights or exclusive privileges, nor does it authorize any injury to public or private property or any invasion of personal rights, or any violations of federal, state or local laws or regulations.

5. This license must be available for inspection on licensee's premises during the entire life of the license.

6. By accepting this license, the licensee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, that are submitted to the EQCB, may be used by the EQCB as evidence in any enforcement proceeding arising under EQCB rules and regulations, except where such use is prohibited by Section 403.111, Florida Statutes.

7. The licensee agrees to comply with Chapter 27, Code of Regulations of the EQCB.

8. Any new owner of a licensed facility shall apply by letter for a transfer of license within thirty (30) days after sale or legal transfer. The transferor shall remain liable for performance in accordance with the license until the transferee applies for, and is granted a transfer of license.

9. The licensee, by acceptance of this license, specifically agrees to allow access to the licensed source at reasonable times by EQCB personnel for the purpose of inspection and testing to determine compliance with this license and EQCB rules and regulations.

10. This license does not constitute a waiver or approval of any other license that may be required for other aspects of the total project.

11. If the licensee wishes to renew the license or extend its term, he shall make application 60 days prior to its expiration. Expired licenses are not renewable.

12. In addition to the general conditions set forth above, each license issued by the EQCB shall contain specific conditions determined by site conditions and requirements pursuant to the regulations as determined by the PCO. Licensee agrees that specific conditions are enforceable by the EQCB for any violation thereof.

13. When requested by the EQCB, the licensee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the license. If the licensee becomes aware that relevant facts were not submitted or were incorrect in the license application or in any report to the EQCB, such facts or information shall be submitted or corrected promptly.

By accepting this license, the licensee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, that are submitted to the EQCB, may be used by the EQCB as evidence in any enforcement proceeding arising under EQCB rules and regulations, except where such use is prohibited by Section 403.111, Florida Statutes.

7. The licensee agrees to comply with Chapter 27, Code of Regulations of the EQCB.

8. Any new owner of a licensed facility shall apply by letter for a transfer of license within thirty (30) days after sale or legal transfer. The transferor shall remain liable for performance in accordance with the license until the transferee applies for, and is granted a transfer of license.

9. The licensee, by acceptance of this license, specifically agrees to allow access to the licensed source at reasonable times by EQCB personnel for the purpose of inspection and testing to determine compliance with this license and EQCB rules and regulations.

10. This license does not constitute a waiver or approval of any other license that may be required for other aspects of the total project.

11. If the licensee wishes to renew the license or extend its term, he shall make application 60 days prior to its expiration. Expired licenses are not renewable.

12. In addition to the general conditions set forth above, each license issued by the EQCB shall contain specific conditions determined by site conditions and requirements pursuant to the regulations as determined by the PCO. Licensee agrees that specific conditions are enforceable by the EQCB for any violation thereof.

13. When requested by the EQCB, the licensee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the license. If the licensee becomes aware that relevant facts were not submitted or were incorrect in the license application or in any report to the EQCB, such facts or information shall be submitted or corrected promptly.

BROWARD COUNTY
ENVIRONMENTAL QUALITY CONTROL BOARD

LICENSE TO Operate Air POLLUTION SOURCE, ACCORDING TO CHAPTER 27-3, BROWARD COUNTY ENVIRONMENTAL QUALITY CONTROL ACT.

LICENSE NO. AO-26609R-2 DATE November 30, 1982

LICENSE ISSUED TO: NAME Florida Power & Light Company

ADDRESS P. O. Box 013100
Miami, Florida 33101

TELEPHONE 552-4060

FOR THE Operation OF Fossil Fuel Steam Generator #5

WITH THE FOLLOWING AIR POLLUTION CONTROL EQUIPMENT:

Maximum Heat Input 1390 MBtu/hr
Exhaust Stack 151 Feet Above Ground Level
Burning Natural Gas and/or #6 Fuel Oil

TO BE KNOWN AS Same as above

AND TO BE LOCATED AT Griffin Road
Dania, Florida

IN ACCORDANCE WITH THE State Operational APPLICATION, DATED September 27, 1982, WHICH IS CONSIDERED PART OF THIS LICENSE. THIS LICENSE EXPIRES November 30, 1987.

THIS LICENSE IS SUBJECT TO ALL FLORIDA STATE, BROWARD COUNTY, AND LOCAL LAWS, REGULATIONS, RULES, AND THE CONDITIONS ATTACHED HERETO.

POST THIS LICENSE IN A PROMINENT PLACE ON THE PLANT PREMISES.

AIR LICENSE

LICENSEE: Florida Power & Light Co.

LICENSE NO. AO-42503R-3 thru 15
DATE OF ISSUE: December 4, 1987
EXPIRATION DATE: December 31, 1989

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations and restrictions set forth herein are accepted by the licensee and enforceable by the EQCB pursuant to Chapter 27 of the Broward County Environmental Quality Control Board (EQCB) Code. The EQCB will review this license periodically and may revoke the license, initiate administrative and/or judicial action for any violation of the conditions by the licensee, its agents, employees, servants or representatives.

2. This license is valid only for the specific uses set forth in the license application and any deviation from the approved uses may constitute grounds for revocation and enforcement action by the EQCB.

3. In the event the licensee is temporarily unable to comply with any of the conditions of the license, the licensee shall notify the PCO within 12 hours. Within 5 working days of the event, the licensee shall submit a written report to the PCO that describes the incident, its cause, the measures being taken to correct the problem and prevent its reoccurrence, the owner's intention toward repair, replacement, and reconstruction of destroyed facilities, and a schedule of events leading toward operation within the license condition.

4. The issuance of this license does not convey any vested rights or exclusive privileges, nor does it authorize any injury to public or private property or any invasion of personal rights, or any violations of federal, state or local laws or regulations.

5. This license must be available for inspection on licensee's premises during the entire life of the license.

6. By accepting this license, the licensee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, that are submitted to the EQCB, may be used by the EQCB as evidence in any enforcement proceeding arising under EQCB rules and regulations, except where such use is prohibited by Section 403.111, Florida Statutes.

7. The licensee agrees to comply with Chapter 27, Code of Regulations of the EQCB.

8. Any new owner of a licensed facility shall apply by letter for a transfer of license within thirty (30) days after sale or legal transfer. The transferor shall remain liable for performance in accordance with the license until the transferee applies for, and is granted a transfer of license.

9. The licensee, by acceptance of this license, specifically agrees to allow access to the licensed source at reasonable times by EQCB personnel for the purpose of inspection and testing to determine compliance with this license and EQCB rules and regulations.

10. This license does not constitute a waiver or approval of any other license that may be required for other aspects of the total project.

11. If the licensee wishes to renew the license or extend its term, he shall make application 60 days prior to its expiration. Expired licenses are not renewable.

12. In addition to the general conditions set forth above, each license issued by the EQCB shall contain specific conditions determined by site conditions and requirements pursuant to the regulations as determined by the PCO. Licensee agrees that specific conditions are enforceable by the EQCB for any violation thereof.

13. When requested by the EQCB, the licensee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the license. If the licensee becomes aware that relevant facts were not submitted or were incorrect in the license application or in any report to the EQCB, such facts or information shall be submitted or corrected promptly.

AIR LICENSE

LICENSEE: Florida Power & Light Co.

LICENSE NO. AO-42503R-16 thru 28
DATE OF ISSUE: December 4, 1987
EXPIRATION DATE: December 31, 1989

GENERAL CONDITIONS:

1. The terms, conditions, requirements, limitations and restrictions set forth herein are accepted by the licensee and enforceable by the EQCB pursuant to Chapter 27 of the Broward County Environmental Quality Control Board (EQCB) Code. The EQCB will review this license periodically and may revoke the license, initiate administrative and/or judicial action for any violation of the conditions by the licensee, its agents, employees, servants or representatives.

2. This license is valid only for the specific uses set forth in the license application and any deviation from the approved uses may constitute grounds for revocation and enforcement action by the EQCB.

3. In the event the licensee is temporarily unable to comply with any of the conditions of the license, the licensee shall notify the PCO within 12 hours. Within 5 working days of the event, the licensee shall submit a written report to the PCO that describes the incident, its cause, the measures being taken to correct the problem and prevent its reoccurrence, the owner's intention toward repair, replacement, and reconstruction of destroyed facilities, and a schedule of events leading toward operation within the license condition.

4. The issuance of this license does not convey any vested rights or exclusive privileges, nor does it authorize any injury to public or private property or any invasion of personal rights, or any violations of federal, state or local laws or regulations.

5. This license must be available for inspection on licensee's premises during the entire life of the license.

6. By accepting this license, the licensee understands and agrees that all records, notes, monitoring data and other information relating to the construction or operation of this permitted source, that are submitted to the EQCB, may be used by the EQCB as evidence in any enforcement proceeding arising under EQCB rules and regulations, except where such use is prohibited by Section 403.111, Florida Statutes.

7. The licensee agrees to comply with Chapter 27, Code of Regulations of the EQCB.

8. Any new owner of a licensed facility shall apply by letter for a transfer of license within thirty (30) days after sale or legal transfer. The transferor shall remain liable for performance in accordance with the license until the transferee applies for, and is granted a transfer of license.

9. The licensee, by acceptance of this license, specifically agrees to allow access to the licensed source at reasonable times by EQCB personnel for the purpose of inspection and testing to determine compliance with this license and EQCB rules and regulations.

0. This license does not constitute a waiver or approval of any other license that may be required for other aspects of the total project.

11. If the licensee wishes to renew the license or extend its term, he shall make application 60 days prior to its expiration. Expired licenses are not renewable.

12. In addition to the general conditions set forth above, each license issued by the EQCB shall contain specific conditions determined by site conditions and requirements pursuant to the regulations as determined by the PCO. Licensee agrees that specific conditions are enforceable by the EQCB for any violation thereof.

3. When requested by the EQCB, the licensee shall within a reasonable time furnish any information required by law which is needed to determine compliance with the license. If the licensee becomes aware that relevant facts were not submitted or were incorrect in the license application or in any report to the EQCB, such facts or information shall be submitted or corrected promptly.

TABLE OF CONTENTS
(Page 1 of 1)

AIR MONITORING

This appendix presents the ambient air and meteorological monitoring data obtained from a two station network established as part of the Lauderdale Repowering Project. The design of the monitoring network is described in the Air Quality Monitoring Plan. This plan was submitted to the Florida Department of Environmental Regulation (FDER) in August, 1988 to fulfill the Prevention of Significant Deterioration (PSD) monitoring requirements codified in Rule 17-2.500(5)(f) Florida Administrative Code (F.A.C.). This monitoring plan was subsequently approved by FDER. The Quality Assurance Manual Including Standard Operating Procedures for Continuous Ambient Air/Meteorological Monitoring and Performance Audits have been submitted separately to FDER.

KEY FOR MISSING CODES
Bad< - To few samples for valid average, Cal - calibration, OCal - Analyzer out of calibration
BadS - Bad Analyzer Status, PwrF - Power Failure, Down - Operator downed channel, Miss - Missing Data
Qad - Data questionable insufficient documentation, Qai - Data questionable external influence, Purg - Analyzer in Purge

KEY FOR MISSING CODES
Bad< - To few samples for valid average, Cal - calibration, OCal - Analyzer out of calibration
BadS - Bad Analyzer Status, PwrF - Power Failure, Down - Operator downed channel, Miss - Missing Data
Qad - Data questionable insufficient documentation, Qai - Data questionable external influence, Purg - Analyzer in Purge

KEY FOR MISSING CODES
Bad< - To few samples for valid average, Cal - calibration, OCal - Analyzer out of calibration
BadS - Bad Analyzer Status, PwrF - Power Failure, Down - Operator downed channel, Miss - Missing Data
Qad - Data questionable insufficient documentation, Qai - Data questionable external influence, Purg - Analyzer in Purge

KEY FOR MISSING CODES
Bad< - To few samples for valid average, Cal - calibration, OCal - Analyzer out of calibration
BadS - Bad Analyzer Status, PwrF - Power Failure, Down - Operator downed channel, Miss - Missing Data
Qad - Data questionable insufficient documentation, Qai - Data questionable external influence, Purg - Analyzer in Purge

APPENDIX 10.5.2

SURFACE WATER

10.5.2 Surface Water

10.5.2.1 Dye Dispersion Study

A dye dispersion study was conducted in the existing Lauderdale Plant cooling canal/pond system to establish the baseline thermal conditions, to provide data for the assessment of the cooling pond's cooling efficiency, and to estimate the travel time of the effluent. The study was conducted according to the guidelines for dye dispersion study methodology as outlined in Florida Department of Natural Resources (FDNR), 1988.

The cooling pond system basically consists of a discharge canal, two large ponds, three deadend finger canals, and a shallow peripheral canal (see Section 2.3.4 for description). There are two narrow and shallow cuts in the system, connecting two ponds and the discharge canal.

The study was conducted February 7-10, 1989 during the new moon spring tide. Two tide gauges were installed in the cooling pond system, as shown in Figure 2.3-9, to continuously record the water level. The tide data indicated that the tide in the cooling canal/pond system ranged from 0.6 ft to 1.5 ft during the study. The tidal fluctuation proved to be a significant factor to dye movement and the change in dye concentration during the study.

METHODOLOGY

Prior to the dye injection, 44 monitoring stations were established in the cooling pond/canal system (see Figure 10.5.2-1). The station locations were identified by either permanent landmark or an anchored buoy to accurately position the monitoring location. The numbers shown in the Figure 10.5.2-1 represent monitoring station number; the open circles represent buoys that were placed on a grid in the pond system, and the dots represent stations that were readily determinable by landmark. The buoys were held in place by concrete blocks with enough rope to account for the water depth and tidal variation. The buoys were all labeled with their corresponding station number with reflective numbers to make them readily identifiable at night.

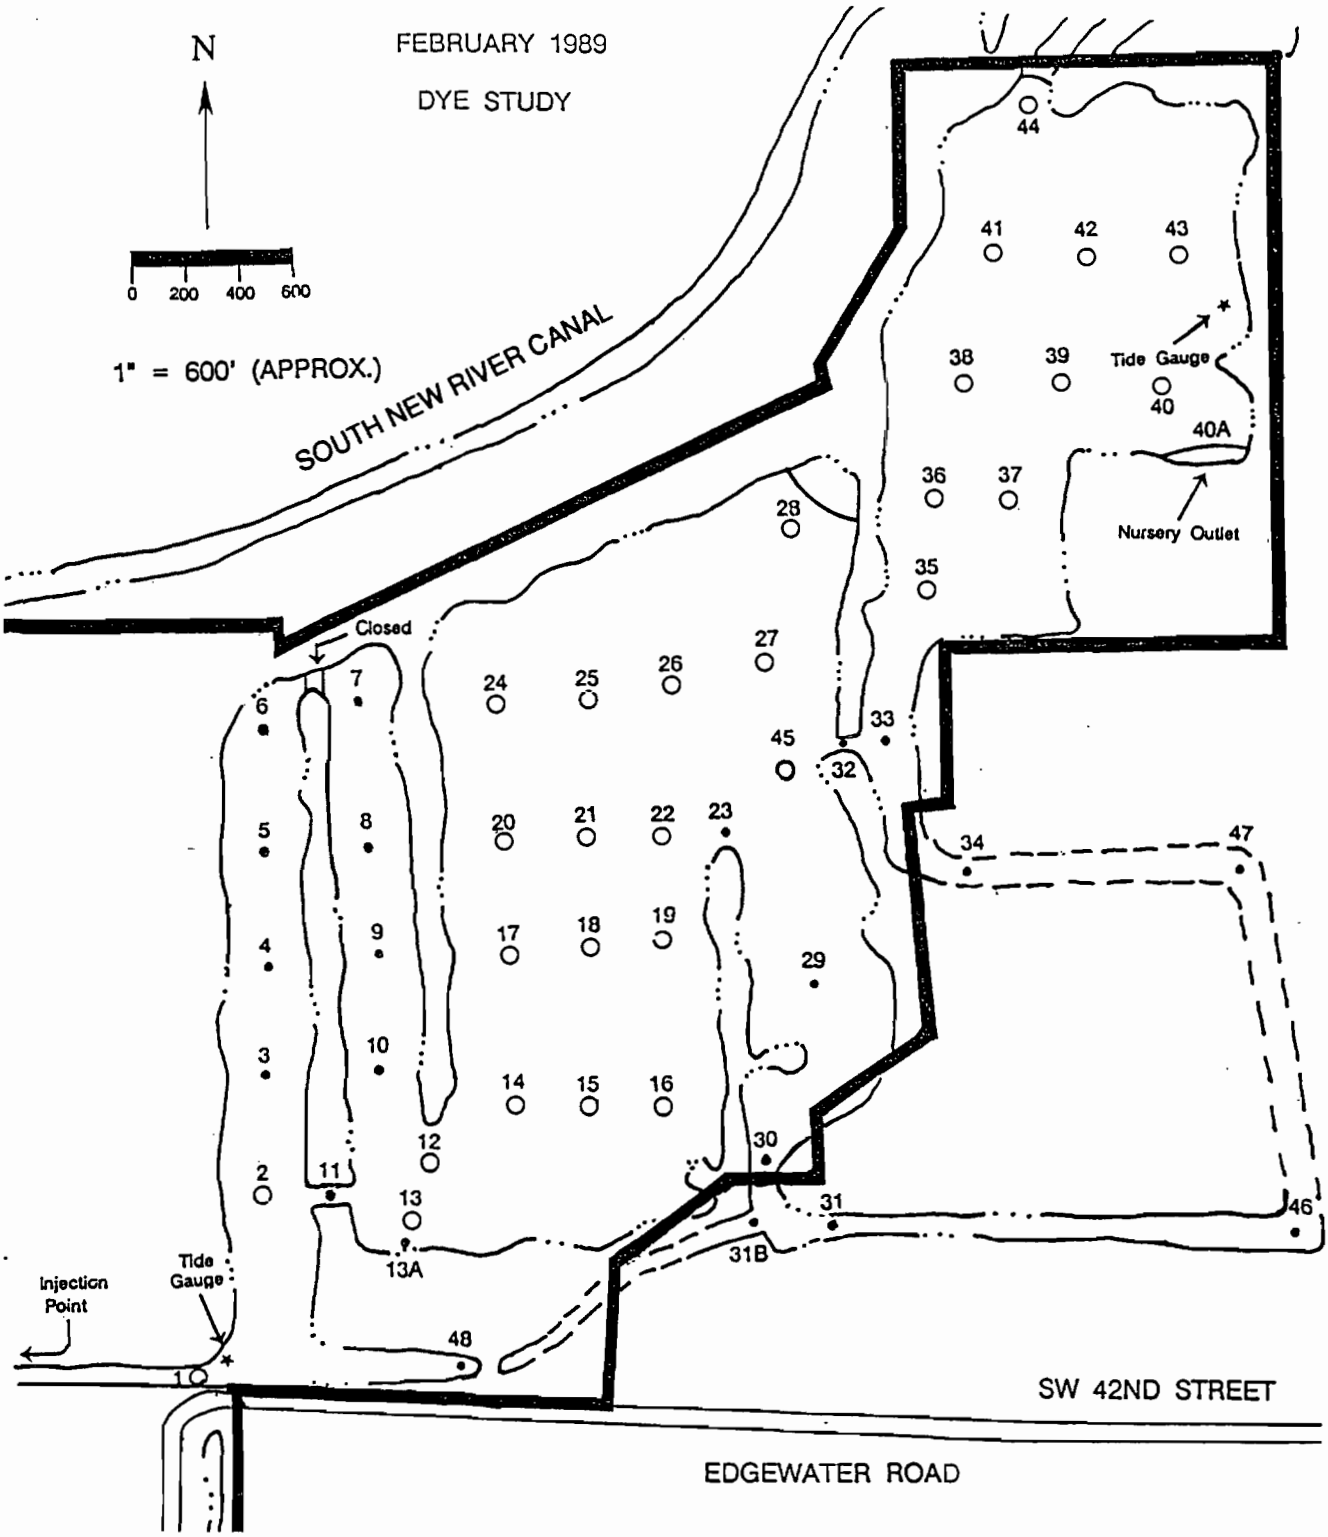

Figure 10.5.2-1 **COOLING POND/CANAL SYSTEM — MONITORING STATION LOCATIONS**

Lauderdale Repowering Project

FPL

Rhodamine WT fluorescent dye was used as the tracer for the dye study. The dye was introduced to the canal/pond system by a single slug injection of 10 liters of Rhodamine WT. The dye was injected at the plant discharge flume at 7:49 a.m., February 7, 1989, in very turbulent water which mixed the dye slug across the cross-section.

The monitoring instrumentation included the Turner Designs® fluorometer, flexible Teflon® intake tubing, an electric diaphragm pump, and an Atkins® digital thermometer installed in-line to the flow-through system for temperature adjustment of the fluorescence. Data were collected continuously around the clock for the period of the study. Collection was accomplished by two teams of two members each working 12-hour shifts. The rotations were staggered to provide continuity to the effort--one member of the previous team would spend 4 to 6 hours with the next team. All data were logged by hand and later keyed into a computer for reduction and analysis. The monitoring parameters included: date, time, temperature profile, fluorescence profile, and the corresponding depths.

Prior to injection, fluorescence in the pond/canal system was monitored to account for the background conditions. The fluorometer was carefully calibrated using standard solutions immediately after the dye study.

In addition to the fluorescent dye monitoring, 50 citrus surface drogues were released at Station 1 at 9:00 p.m. on February 8, 1989, to provide a second indicator of surface travel time. The drogues proved to be a simple but reliable backup for dye dispersion monitoring.

The dye monitoring concluded at 6:38 a.m. on February 10, 1989, about 71 hours after the injection.

RESULTS

Tables 10.5.2-1 and 10.5.2-2 present the dye data for the duration of the study including the calibrated result in parts per billion (ppb). The data are divided into two tables because the measurements were taken with different instruments. The original fluorometer malfunctioned during the

first 15 hours of the study, and the decision was made to replace it with a backup. The nature of the meter malfunction made it impossible to calibrate the first instrument, so the data recorded in Table 10.5.2-1 have been left uncalibrated. The initial fluorescence data, although not calibrated, were valuable for travel time estimation.

Figure 10.5.2-2 qualitatively describes the general movement of the dye through the system. If it were not for the flood tide severely limiting and sometimes preventing discharge from the pond/canal system, a stream flow would exist throughout the entire system with a gradually widening mixing band.

DISCUSSION

A close comparison of the synoptic views with the tide data demonstrates the importance of the tidal fluctuation for mixing and utilization of the entire system. As was previously discussed, even though the existing canal/pond system has a fairly complex physical morphology, the dye and thermal effluent are primarily distributed on a riverine and superficial path through the system (Figure 10.5.2-2). During a retreating tide, the plant discharge moves through the system from Station 1 through the first and second cuts (Stations 11 and 32) and exits the outfall (Station 44). These cuts are critical because they allow the discharge to shortcut the vast majority of the system.

The tidal fluctuation is vital to usefulness of the rest of the system. During peak flood tide flow, when the system's discharge through the outlet is reduced, the effluent moves up the fingers and into the system canals.

The first synoptic view shows a higher concentration in the first finger (Stations 3 through 6) than the second (Stations 7 through 10). This differentiation is most likely the result of the first flood flow during the study (3.1 to 9.42 hours) which forced a great deal of the dye into the first finger and some (that which had already moved through the first cut) into the second. This was compounded by the closing of the northern

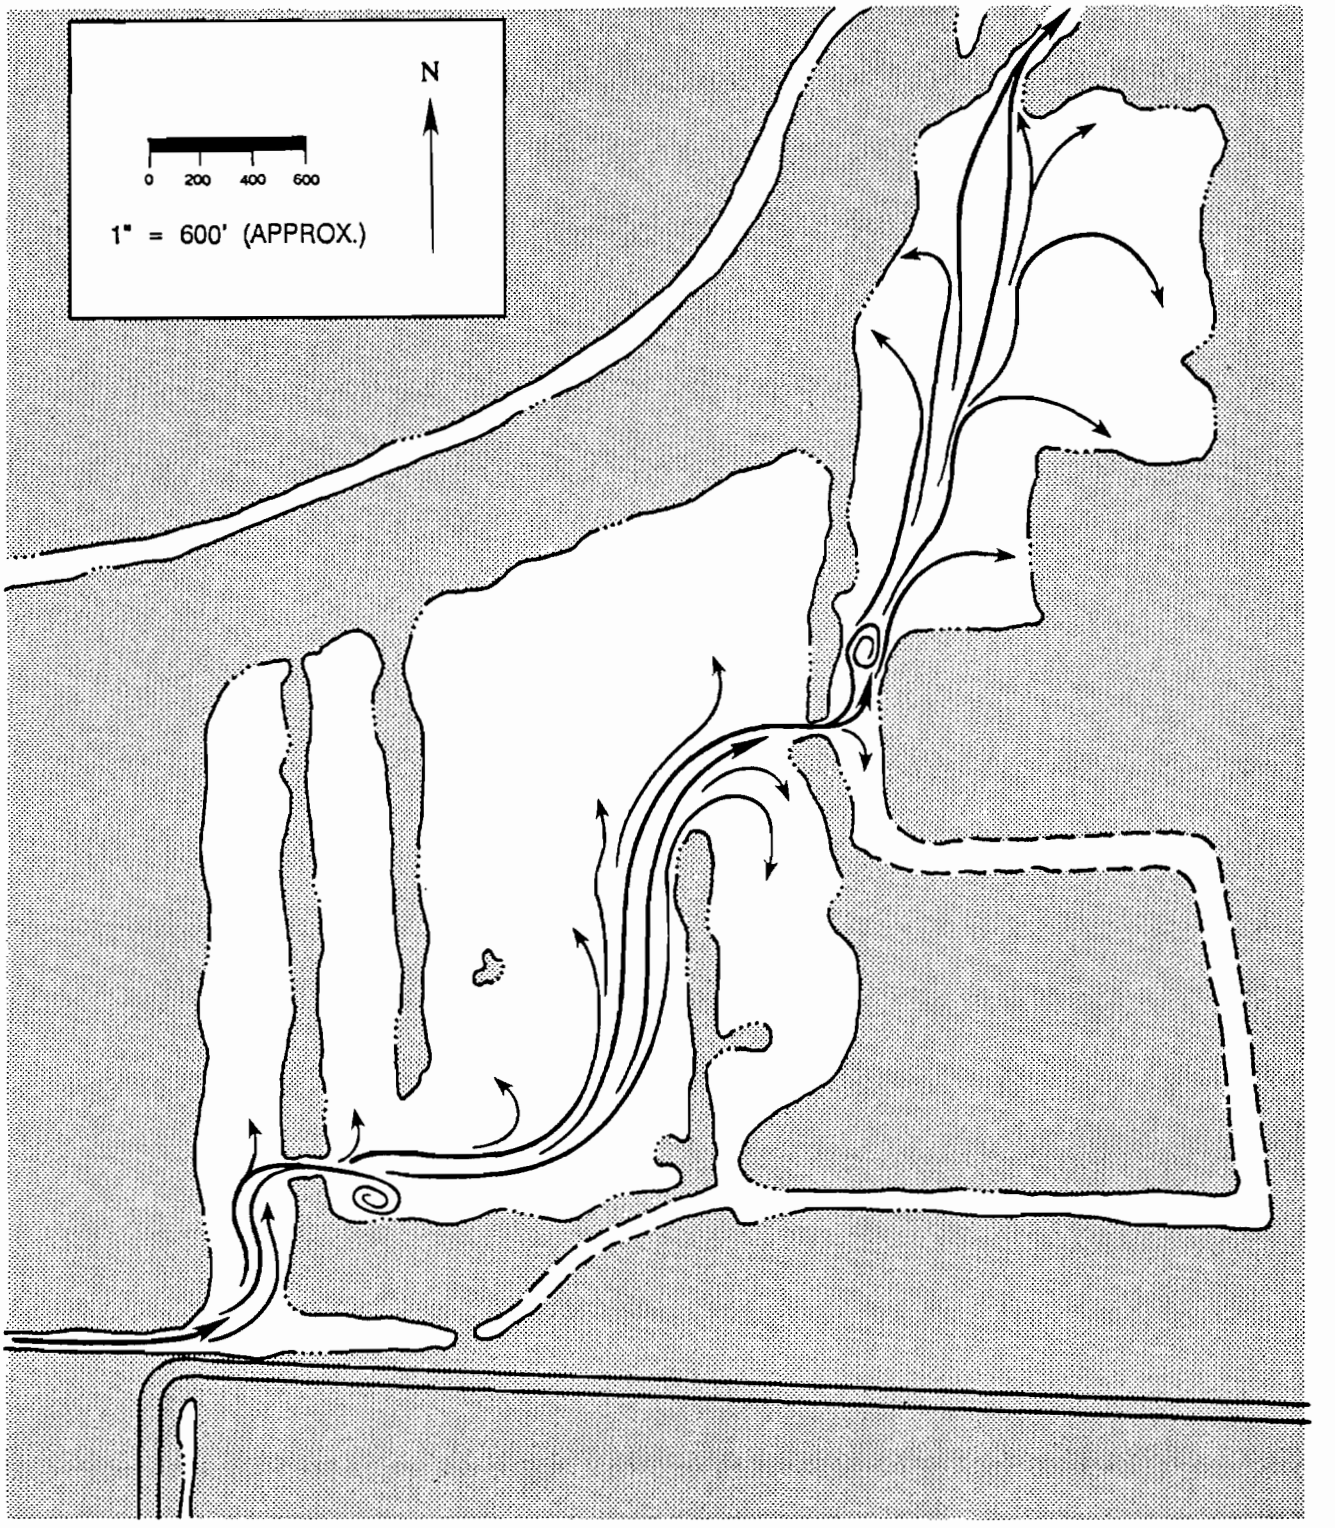

Figure 10.5.2-2 DISTRIBUTION OF TRACER DYE PLUME AT EBB TIDAL FLOW

Lauderdale Repowering Project

FPL

connection between the fingers by the dredging operation during the period of the study.

It was these secondary movements of the dye into the fingers, canals and edges of the ponds that account for the fluctuation in the concentration and the apparently long holding time of the system. When the tide was going out, some of the dye moved out of the fingers and the canal and closer to the outlet. The incoming tide then diluted the overall concentrations of dye in the system and greatly reduced discharge.

The actual travel time of the primary plume in the system is much shorter than the synoptic views indicate. The highest concentration of the dye plume reached the first cut (Station 11) at 1.83 hours and the outlet (Station 44) by 27.83 hours. Figures 10.5.2-3 through 10.5.2-5 graphically illustrate the travel of the dye plume through three key stations (Stations 18, 39, and 44). The highest concentrations reached the middle of the first pond by 18.39 hours and the second by 27.53 hours.

The surface drogue study confirmed these results. Five of the drogues were spotted approximately 18 hours after their release at Station 35 in Pond 2. Winds were either calm or light easterly (against the flow direction) during the drogue study; therefore, the true travel time to the second pond would be less than 18 hours.

The study was concluded February 10, 1989, at 6:38 a.m., 70.83 hours after the injection. Fluorescence levels at Station 1 began to rise after they had long been reduced to what was considered to be the background condition (<0.30 ppb). At 3:59 a.m., February 10, the concentration climbed to 0.44 ppb and then to 0.70 ppb at 5:59 a.m. This situation indicated a possible recirculation condition.

The receiving water body (South New River) is joined to the source water body (Dania Cut-Off Canal) just west of the plant property by the South New River Canal. Although this connection is made west of the intake and west of the outfall, the canal flows south toward the Dania Cut-Off Canal during

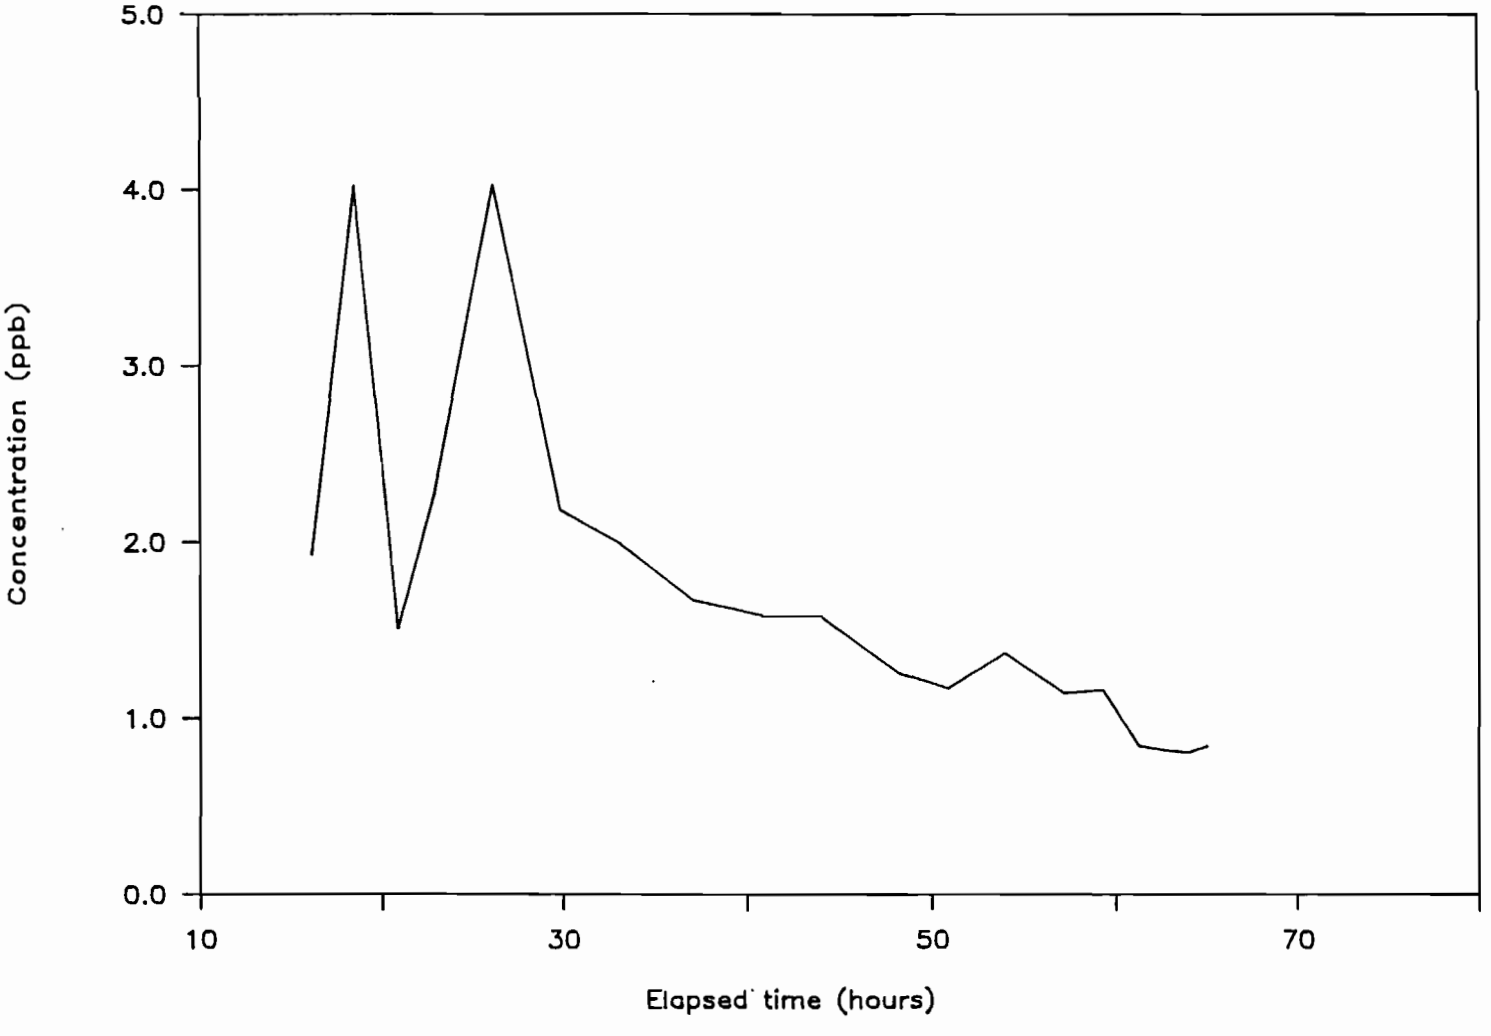

Figure 10.5.2-3 **CHANGE IN CONCENTRATION OVER TIME AT STATION 18**

Lauderdale Repowering Project

FPL

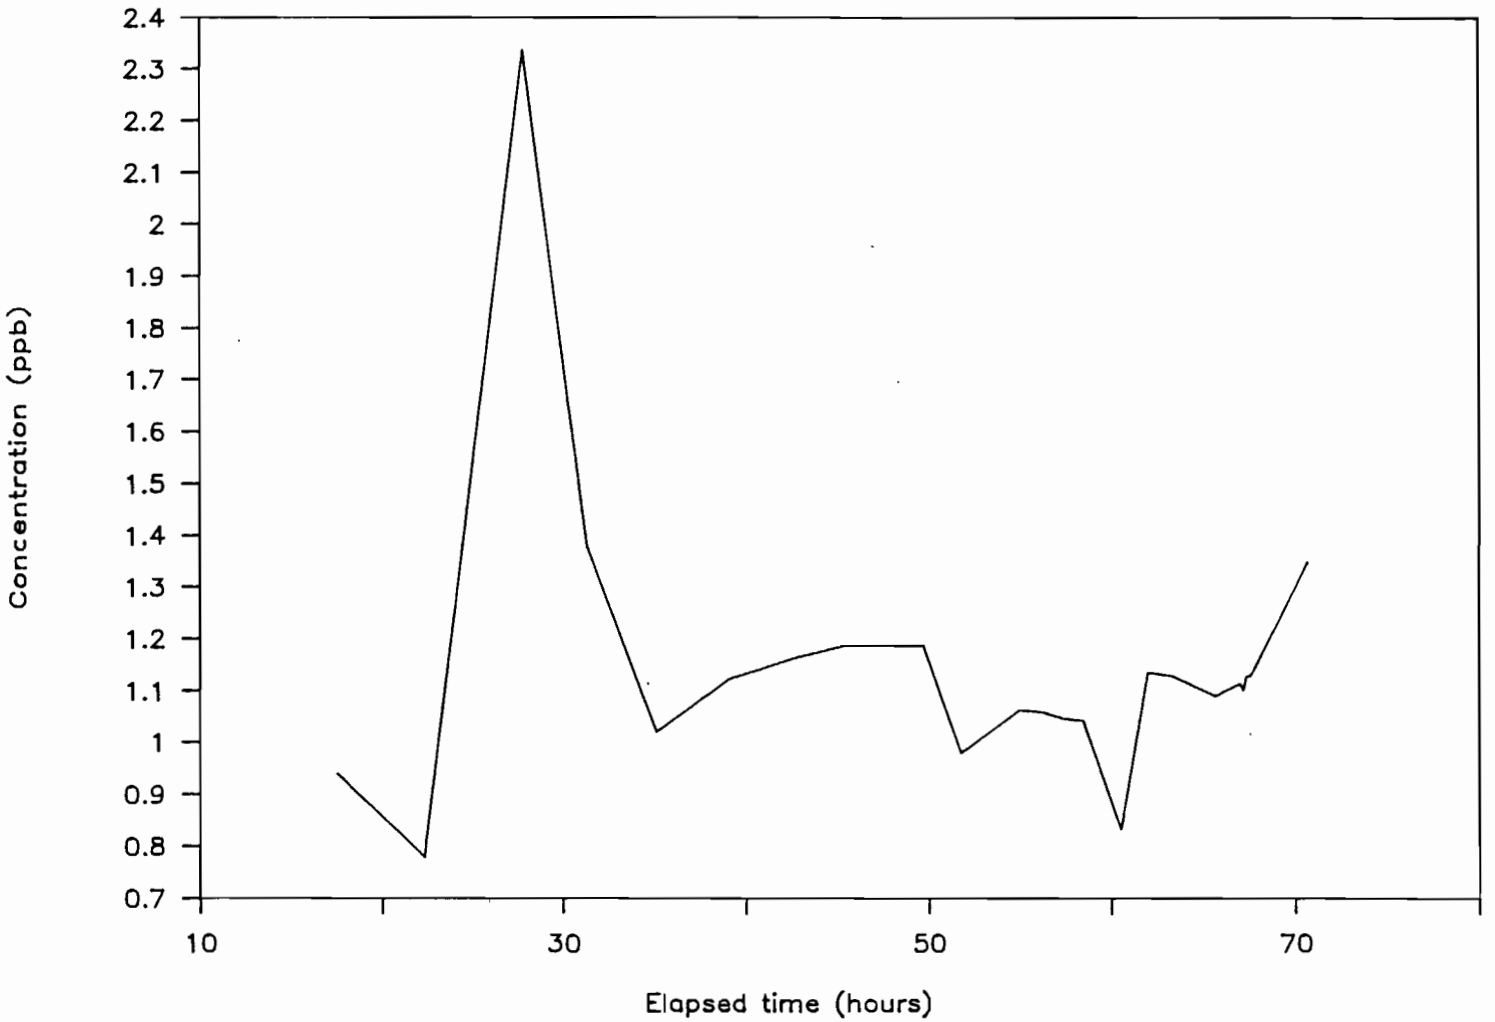

Figure 10.5.2-5 **CHANGE IN CONCENTRATION OVER TIME AT STATION 44**

Lauderdale Repowering Project

FPL

the flood tide. Since there doesn't seem to be any other leaks in the canal/pond system (one inflow and one outfall), the South New River Canal is the most likely source of recirculation.

The potential retention capacity and residence time of the cooling pond can be calculated as follows:

$$t = \frac{V}{Q \times 24 \times 3600 + P \times 2}$$

where: t = Residence time (days)

V = Pond volume

2.8×10^8 ft^3

Q = Discharge rate

= 517 cfs

P = Tidal prism

= A · H

A = Pond surface area

= 184 acres

= 8.0×10^6 ft^3

H = Average tide range

= 0.87 ft

The computed potential travel time was 4.6 days; however, the dye study data indicated that the actual travel time was approximately 30 hours, much less than the maximum capacity. Therefore, the existing cooling pond did not reach its potential efficiency. The cause of the reduced efficiency may be:

1. The pond configuration was not streamlined. Flow separation from the shoreline boundary would create pockets of relatively stagnant areas and cause a short circuit of the system.
2. There were deadend finger canals which did not allow direct flow through.
3. The bottom topography was irregular. Deep holes would reduce the usable volume of the cooling pond.

4. The connecting cuts between the cooling pond were shallow and narrow. The shallow cut would force the thermal discharge to be spread at the surface, therefore reducing the residence time.

10.5.2.2 RECEIV-II Setup and Calibration

METHODOLOGY

The water quality model RECEIV-II was used to simulate the hydraulic and water quality in the Lauderdale cooling pond and the adjacent receiving waters. RECEIV-II was originated from the Stormwater Management Model (SWMM-II) developed by Huber and Heaney (1975) and sponsored by EPA.

RECEIV-II is a dynamic, link-node hydrodynamic and water quality model. The governing equation and numerical scheme is one-dimensional in a strict sense; however, the model nodes can be linked to construct a two-dimensional vertically integrated physical system. The RECEIV-II model consisted of two major components: quantity and quality blocks. The quantity block simulates the hydrodynamics in tidal estuaries, and the quality block simulates the transport, mixing, physical, chemical, and biological processes in the water column.

An important feature of the model is that it can simulate dynamic tidal effects with multiple ocean boundary conditions. These dynamic properties of the RECEIV-II model enable adequate simulations at the project site.

The RECEIV-II model was modified to include heat exchange and thermal mixing in order to simulate the plant thermal discharge into the cooling pond and the receiving waters. The model was also modified to simulate flow augmentation and recirculation.

The heat dissipation was represented by the following formula:

$$T_t - T_e = (T_t + \Delta t - T_e)\, e^{-Rt}$$

where: t = time,

Δt = numerical time step,

T_t = water temperature at time t,

T_e = equilibrium temperature,

$R = k/(\rho\ C_p\ d)$,

k = heat exchange coefficient,

ρ = water density,

C_p = heat capacity of water, and

d = water depth.

The input requirements for the RECEIV-II model are:

1. Channel depth, width, and length;
2. Manning's coefficients for each segment;
3. Surface storage area of nodes;
4. Discharge into nodes;
5. Equilibrium temperature;
6. Quantity and water quality of point sources;
7. Exchange coefficients at tidal boundaries; and
8. Water quality at ocean boundaries.

The model output includes:

1. Velocity within each segment,
2. Water surface elevation at each node, and
3. Water temperature at each node,
4. Salinity, and
5. Conservative substances.

MODEL SEGMENTATION

The FPL model consisted of 91 nodes and 100 channels including South Fork New River, North Fork New River, South New River Canal, Dania Cut-Off Canal, the Intracoastal Waterway, Port Everglade, and the FPL cooling pond. Three ocean boundaries were used in the model: Port Everglade entrance, Hillsborough Inlet, and Bakers Haulover Inlet. The model segmentation in the cooling pond and the adjacent receiving waters is shown in Figure 5.1-1.

To maintain numerical stability, the hydraulic time step of 12 seconds was used, and the water quality time step was 0.1 hour.

MODEL CALIBRATION

The FPL thermal model was calibrated using tide, current, salinity, and temperature data collected May 1 through May 3, 1989.

The monitoring program included:

1. Thirty-seven water quality stations for salinity and temperature,
2. Six stations for current measurements,
3. Three continuous water-level recorders,
4. Seven thermograph arrays for continuous temperature monitoring, and
5. Bathymetric surveys to determine the channel width and depth.

The complete data presentation of the model calibration data was shown in Appendix 10.5.2.5.

HYDRODYNAMIC CALIBRATION

The hydrodynamic component of the RECEIV-II model was initially calibrated using the tide and current data of May 1, 1989. The hydrodynamic model was further fine-tuned using the salinity data.

The calibrated model projected a tidal range of 1.55 ft in the cooling pond, while the recorded tide range was 1.54 ft. The model also projected a tide range of 0.95 ft at the plant intake which was identical with the recorded tide gauge data.

The model calibration showed that the South New River Canal had a net flow of 248 cfs toward the intake, and the current data indicated a net flow of about 210 cfs.

After the hydrodynamic model was complete, the temperature data were used to calibrate the thermal component of the model.

SALINITY CALIBRATION

The salinity calibration are shown in Figure 10.5.2-6 which indicated that the salinity prediction was within the range of calibration data. The data

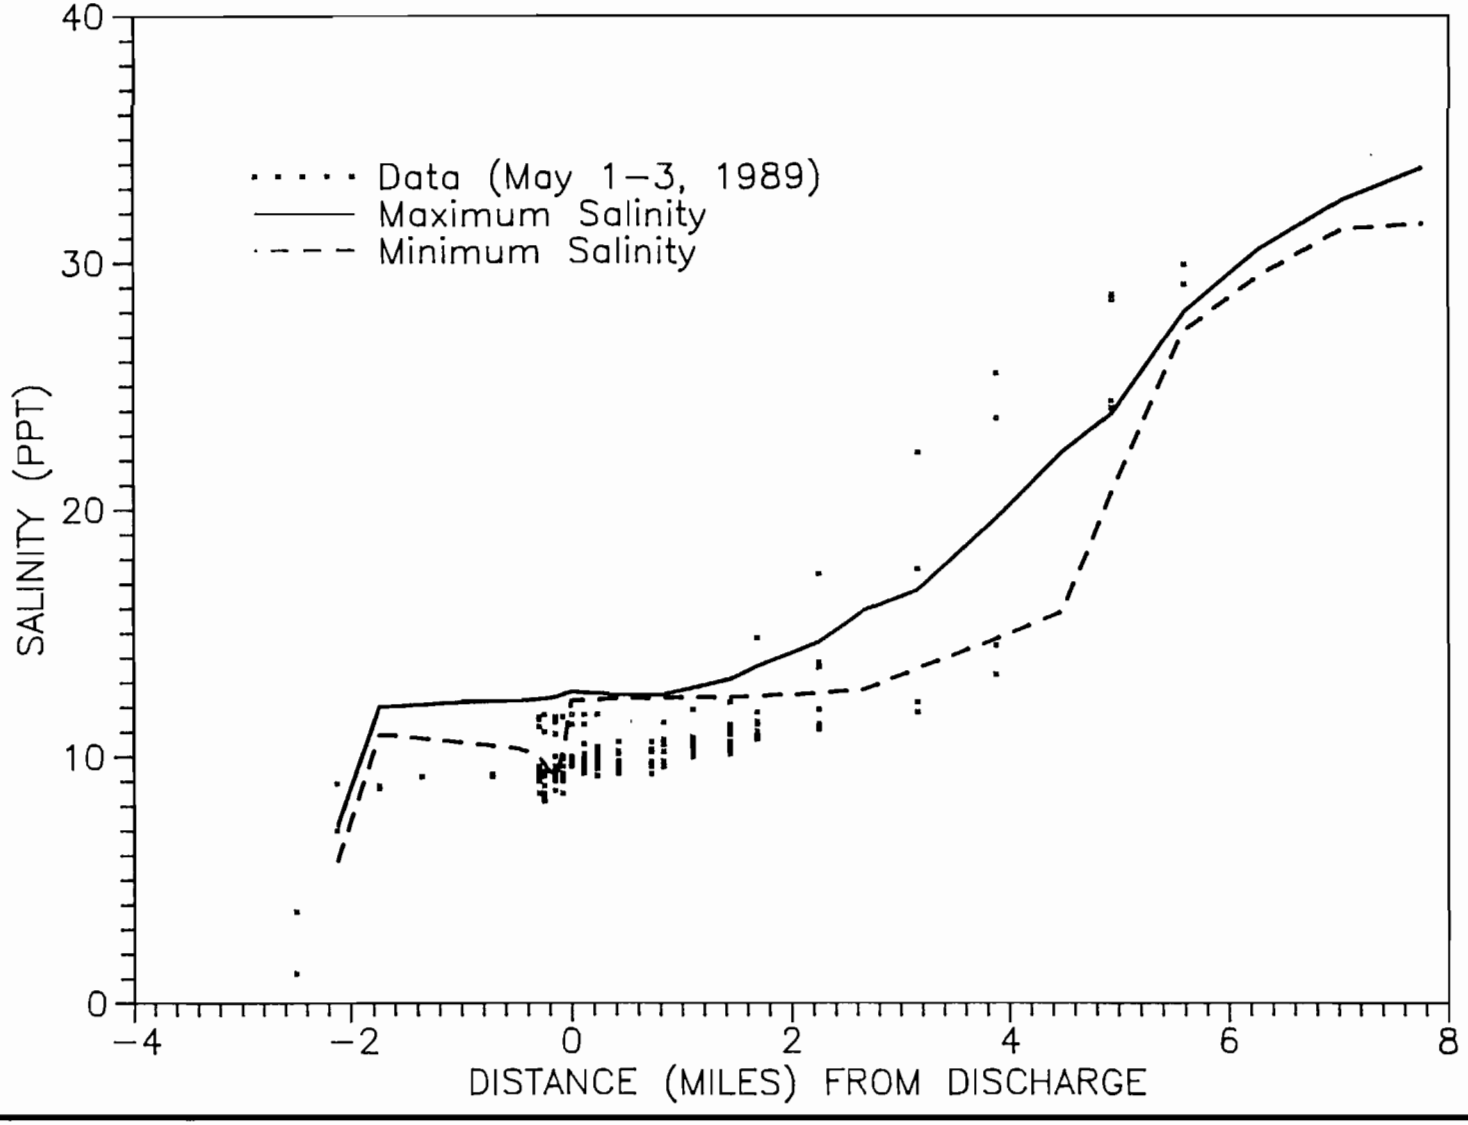

Figure 10.5.2-6 MODEL CALIBRATION FOR SALINITY SIMULATION

Lauderdale Repowering Project

FPL

points in the figure represent the vertical average salinity at a particular time and location.

TEMPERATURE CALIBRATION

The temperature calibration results are shown in Figure 10.5.2-7. The diurnal temperature data indicated a daily temperature fluctuation of about 1.5°F, probably caused by the diurnal change of the atmosphere temperature. Therefore, it was attempted to match the model predictions with the upper envelope of the data range for the purpose of being conservative.

The model calibration indicated that the effective depth of the cooling pond was about 13.5 ft, using a heat exchange coefficient of 197 Btu/ft^2/day/°F for the month of May.

MODEL SCENARIOS

Five scenarios were simulated for various seasonal and plant operation conditions (existing, repowered, and steam dump conditions). Winter and summer simulations were conducted for the existing and repowered conditions. In addition, a steam dump condition was simulated. The steam dump condition represents a short-term operation scenario described as follows:

1. Unit No. 1 has a constant discharge of 136,000 gpm with a 13.2°F temperature increase.
2. Unit No. 2 has variable discharge. It will discharge 116,000 gpm for 15 hours with a 23.0°F temperature increase; for the remaining 9 hours during the day, the unit will discharge 58,000 gpm without a temperature increase.
3. The duration of the steam dump operation will be 8 consecutive days.

The plant discharge has a constant temperature increase of 13.2°F for the existing and the repowered conditions.

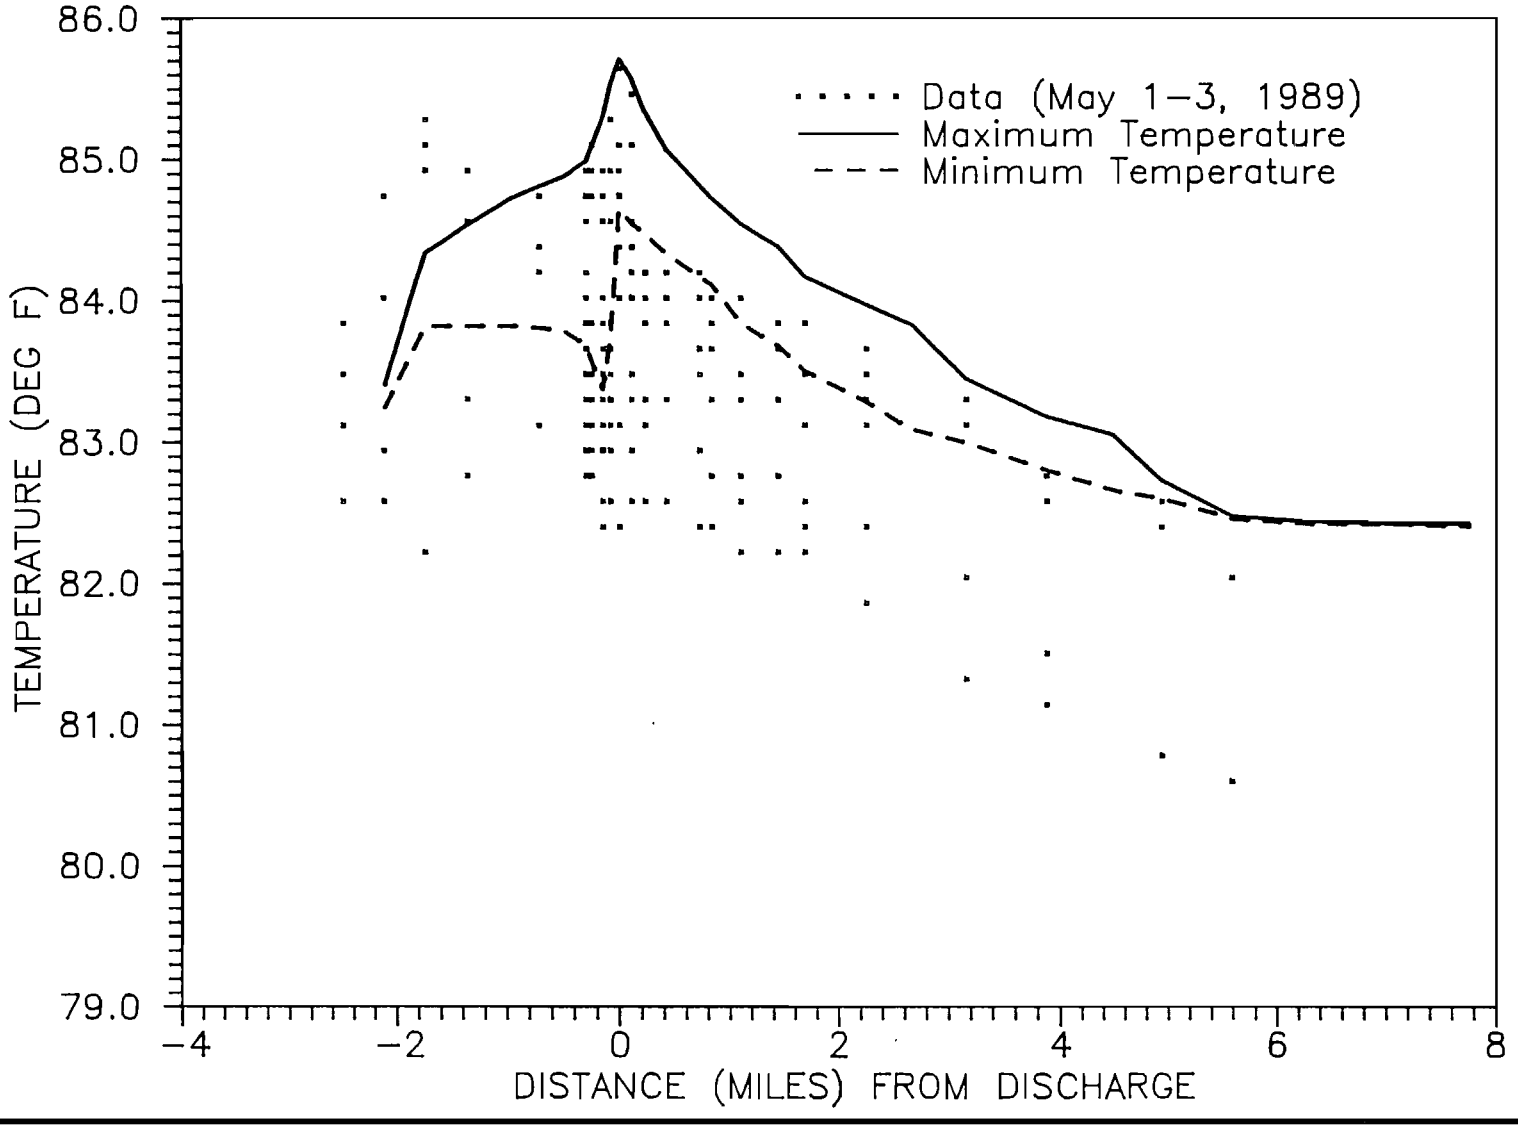

Figure 10.5.2-7 **MODEL CALIBRATION FOR TEMPERATURE SIMULATION**

Lauderdale Repowering Project

FPL

The heat exchange coefficients for various months are shown in Table 5.1-8 of the SCA. For the purpose of being conservative, the model used 90 percent of the literature values for heat exchange coefficients.

Table 5.1-2 of the SCA shows the environmental parameters for each scenario. An average tide range of 2.6 ft was used at ocean tidal boundaries, and the USGS long-term average flow data for August and January were used as upstream freshwater inflow for summer and winter conditions, respectively.

According to USGS flow data from 1957 through 1985, the following monthly average flows were used as the freshwater inflow for summer and winter simulations:

	Summer Condition (cfs)	Winter Condition (cfs)
Sewell Locks at South Fork New River	498	282
South New River Canal	199	171

10.5.2.3 Model Calibration Data

A temperature, salinity, and current study was conducted in surrounding water bodies to establish the baseline conditions of the present cooling system and to provide data for the calibration of a numerical model. Additionally, a bathymetric survey was conducted in portions of the New River where current measurements were taken to furnish additional data for these purposes. The synoptic study station locations are shown in Figure 10.5.2-8.

Temperature and specific conductivity profiles were taken May 1-3, 1989 amid clear and sunny conditions. Current measurements were taken May 2, 1989, and the bathymetric survey was conducted June 22, 1989. Ambient air temperature ranged from 23 to 31°C during the May 1-3 study.

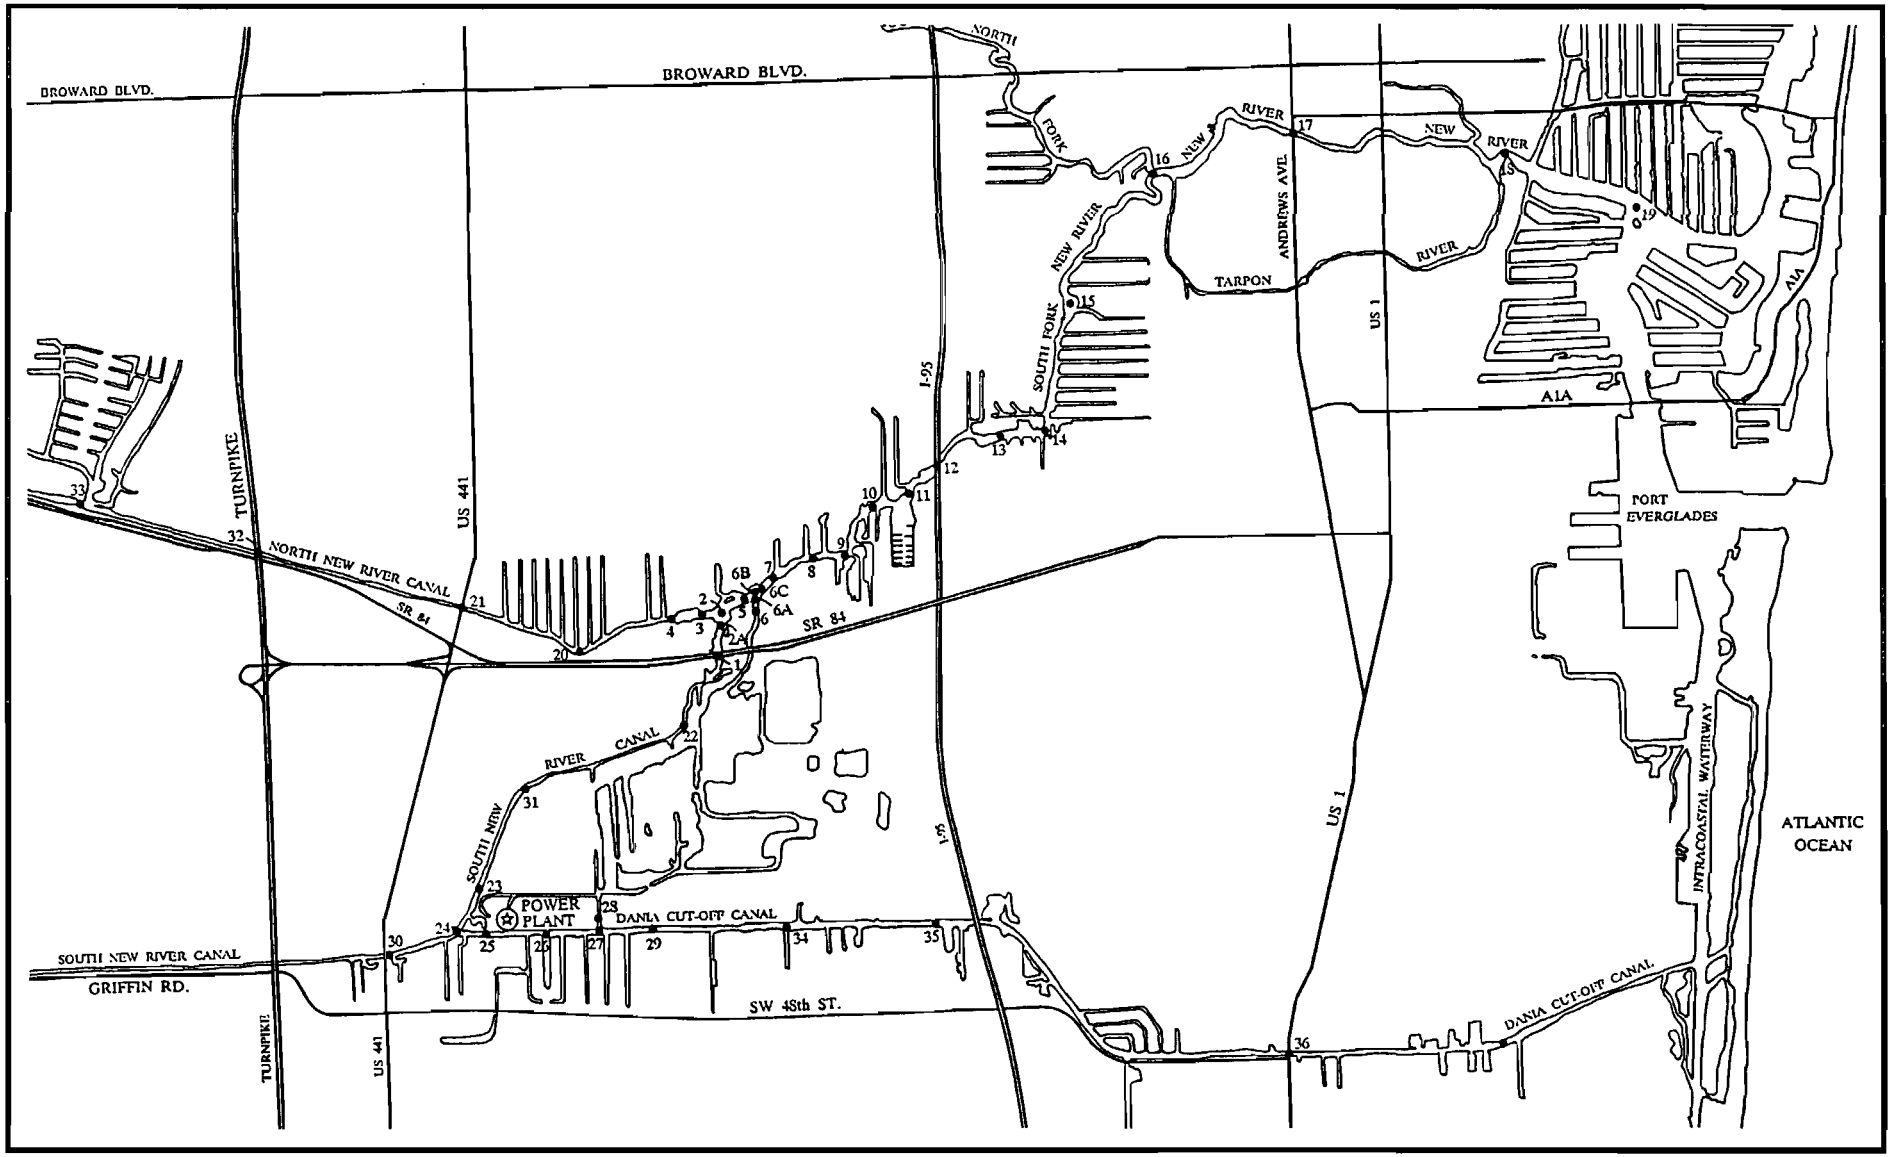

Figure 10.5.2-8 SYNOPTIC STUDY STATION LOCATIONS

Lauderdale Repowering Project

FPL

The Lauderdale Plant remained on-line for the duration of the study. The plant was operating with only one of its two units. Under this condition, the plant released a constant discharge of 116,000 gpm to the heat dissipation system.

METHODOLOGY

Due to the size of the study area, two crews of two persons each were employed to insure that a sufficient quantity of data was collected during the 3-day effort (May 1-3, 1989). Temperature and specific conductivity profiles were conducted in both the sources (SWB) and receiving water bodies (RWB) to the existing thermal dissipation system. Velocity profiles were conducted the second day by a single crew encompassing both the peak ebb and peak flood flow periods.

Temperature and specific conductivity were measured with two Hydrolab® Series 4000 instruments. Conductivity was calibrated daily to laboratory standards and checked at day's end before shutdown. Since the temperature sensor on these units is set at the factory, the calibration was established by checking both of the instruments against a single NBS thermometer over a range of temperatures. Velocity profiles were measured by a cable-suspended Teledyne Gurley® Model 622 Price Type AA current meter with a 15-pound lead weight. The bathymetric study employed a combination of a Raytheon® portable fathometer and manual sounding.

For the majority of measurements of the three parameters [temperature (°C), specific conductivity (umho/cm), and velocity (fps)] readings spanning the depth of the water body were taken at the surface, mid-depth, and near the bottom. The salinity values reported in this document were numerically converted by the conductivity and temperature data.

The monitoring effort encompassed the series of canals and rivers contiguous to the FPL cooling canal/pond system. These include the Dania Cut-Off Canal to the Atlantic Intracoastal Waterway (AIWW), the South New River Canal, the South Fork New River, the New River east to the AIWW, and the North New River Canal.

Temperature and conductivity measurements were taken at seven locations along the Dania Cut-Off Canal from the Intracoastal Waterway to its head at the South New River Canal. There are also seven stations associated with the South New River Canal from the control structure at US 441 to where it combines with the New River. Temperature and conductivity were also measured at 20 locations along the New River from its confluence with the North New River Canal in the west to the Intracoastal Waterway in the east. Four stations were established along the reach of the North New River Canal from the Sewell's Locks in the west to the South Fork New River.

Velocity profiles were measured at six stations in a limited area around the outfall from the FPL cooling canal/pond system. The bathymetric survey incorporated seven locations in the vicinity of the discharge to the New River.

Ryan Instruments® Model J thermographs were continuously collecting data at seven locations in the cooling canal/pond system including one station at the intake and one just beyond the discharge point in the South Fork New River. These data are reported in Appendix 10.5.2.2.

Three Stevens Instruments® continuous water-level recorders were installed in the project area to monitor tidal effects. Two of these are located in the pond/canal cooling system and one outside (see Section 2.3.4 for these locations and Appendix 10.5.2.1 for the results of this monitoring).

TEMPERATURE AND SALINITY RESULTS

The data listing for the May 1-3, 1989, effort is divided into two tables. Table 10.5.2-3 presents the temperature and salinity along with the corresponding date, time, measurement depth, and ambient air temperature for the stations located in the New River system (South Fork New River and the North and South New River Canals). Table 10.5.2-4 presents the temperature and salinity data from the Dania Cut-Off Canal system. Tables 10.5.2-5 and 10.5.2-6 list the distances of the sampling stations from the discharge station and the intake station, respectively.

CURRENT AND BATHYMETRIC RESULTS

Table 10.5.2-7 presents the results of the current measurements taken May 2, 1989 in feet per second (fps) along with the corresponding depth (ft) and time for six stations in the vicinity of the discharge in the South Fork New River. This includes one station in the South New River Canal (Station 1), three inland of the discharge in the South Fork New River (Stations 3-5) and one seaward on the discharge (Station 6) was also measured. Table 10.5.2-7 also presents a vertical profile average for each station and the tidal flow direction at the time of measurement.

The channel cross-sections from the June 22, 1989, bathymetric study are presented in Table 10.5.2-8. The average channel depth on the New River was 13.6 ft-MLW with a maximum of 17.3 ft (Station 5) and a minimum of 10.4 ft (Station 7). The South New River Canal is shallower, with a maximum depth of 9.3 ft-MLW at the one measurement location. The maximum depth of the discharge channel was 15.9 ft-MLW at the point of measurement.

10.5.2.4 Water Quality Data

The water quality data collected during the study period as described in Section 2.3.4 are presented in Tables 10.5.2-9 through 10.5.2-13. Priority pollutant data for all five stations are presented in Table 10.5.2-14.

EPORTS (NO. B-1 thru B-5) OF: TEST BORINGS ORDER NO. 19184.1(1002)

LIENT:	Ebasco Services, Inc.
PROJECT:	FPL Lauderdale Repowering Proj. Geotechnical Exploration Serv. Cont.#AE-88031
LOCATION:	SW 42nd Avenue, Ft. Lauderdale, Florida
ARCHITECT:	Not Furnished
ENGINEER:	Not Furnished
DATE:	September 12 and 13, 1988
REPORTED TO:	Ebasco Services, Inc. 145 Technology Park/Atlanta Norcross, Georgia 33092

Gentlemen:

ubmitted herewith are logs of test borings performed by **WINGERTER LABORATORIES, INC.** at the project location under authorization of the client. The logs present factual information on the subsurface conditions at the specific test boring locations; no warrantee is expressed or implied that materials or conditions other than those described will not be encountered at the project site.

These logs are submitted as the confidential property of the client; for our mutual protection, authorization for publication or extraction of information contained on the logs is reserved pending our written approval.

Field work was performed using standard drilling equipment. Soil samples (disturbed) were obtained in accordance with ASTM D-1586 by which method a 2-foot long, 2-inch diameter split spoon sampler is advanced by successive blows of a 140 pound hammer free-falling 30 inches. The number of blows for each 6 inches of penetration is recorded; the sum of the second and third blow counts for each 2-foot mpling interval constitutes the Standard Penetration Resistance in blows per foot.

Soil samples will be retained by **WINGERTER LABORATORIES, INC.** for a period of 90 days only unless specifically requested otherwise by the client.

The number and locations of the test borings were determined by the client.

Test borings were staked in the field by the client.

Borings were terminated at depths as determined by the client.

Elevations of the test borings were furnished by the client.

terpretation and recommendations based upon these data will be made if requested.

Respectfully submitted,
WINGERTER LABORATORIES, INC.

Felix A. Peguero 9/15/88

SOILS LABORATORY TEST REPORT

REPORT OF: **WASHED SIEVE ANALYSIS OF SOIL**

CLIENT: Ebasco Services, Inc.

PROJECT: FP & L Co., Lauderdale Re-powering Project Geotechnical Exploration Services Contract #AE-88031

LOCATION: S.W. 42 Avenue, Ft. Lauderdale, FL

RESULTS OF TESTS:

Laboratory No.	5558	5559	5560
Sample No.:	4	5	6
Sample Source:	Boring No. B-1, Sample No. 9, Depth 25'-27'	Boring No. B-2 Sample No. 3, Depth 3'-4'	Boring No. B-2 Sample No. 5, Depth 6'-7'
Description:	Tan to gray fragmented limestone with some calcareous sand.	Gray to black organic stained quartz sand.	Black organic stained semi-plastic quartz sand with trace roots.

APPENDIX 10.5.4

AQUATIC ECOLOGY

Table 10.5.4-1. Fish and Epibenthic Fauna Collected or Observed at Stations in the Vicinity of FPL's Lauderdale Plant, August 23 through 25, 1988

Scientific Name	Common Name	Station 1	2	3	4	5	6	7
FISH								
Carangidae sp.	Jack						O	
Cicehlidae spp.	Cichlids	X		O		X		
Diapterus rhombeus	Caitipa mojarra						X	
Eucinostomus argenteus	Spotfin mojarra						X	
Eucinostomus gula	Silver jenny		X					
Eugerres plumeri	Striped mojarra		X					
Etheostoma sp.	Darter		X					
Gambusia affinis	Mosquitofish		X					
Lophogobius cyprinoides	Crested goby						X	
Mugil cephalus	Striped mullet			X	X	X	X	
Strongylura marina	Atlantic needlefish			X	O	O	X	O
Tilapia sp.	Tilapia	X		O		X		
Trinectes maculatus	Hogchoker	X						
INVERTEBRATES								
Callinectes sapidus	Blue crab	X						
Macrobrachium carcinus	River shrimp	X		O		X		
Neritina reclivata	Neritina		X					
Palaemonetes pugio	Grass shrimp		X					
Rhithropanopeus harrisii	Mud crab	X						
REPTILES								
Pseudemys floridana peninsularis	Peninsular cooter	X						
Trionyx ferox	Florida softshell turtle	X						

Note: X = collected.
O = observed.

Table 10.5.4-2. Fish and Epibenthic Fauna Collected or Observed at Stations in the Vicinity of FPL's Lauderdale Plant, November 28 through December 1, 1988

Scientific Name	Common Name	Station 1	2	3	4	5	6	7
FISH								
Arius felis	Sea catfish	O		O				
Centropomus undecimilis	Snook			O				
Cichlidae sp.	Cichlids	X		X				
Eugerres plumeri	Striped mojarra	X	X	O				
Gerres cinereus	Yellowfin mojarra		X					
Lophogobius cyprinoides	Crested goby		X	X	X	X	X	
Mugil cephalus	Mullet	O		O	O	O	O	
INVERTEBRATES								
Callinectes sapidus	Blue Crab	X	X				X	
Macrobrachium carcinus	River shrimp					X		
Penaeus duorarum	Pink shrimp	X				X		
Rhithropanopeus harrisii	Mud crab	X						
Sesarma cinereium	Wharf crab		X	O				
REPTILES								
Alligator mississippiensis	Alligator		O					

Note: X = collected.
O = observed.

Table 10.5.4-3. Fish and Epibenthic Fauna Collected or Observed at Stations in the Vicinity of FPL's Lauderdale Plant, February 27 through March 2, 1989

Scientific Name	Common Name	Station 1	2	3	4	5	6	7
FISH								
Anchoa hepsetus	Striped anchovy	X						
Archosargus probato-cephalus	Sheepshead			O				
Arius felis	Sea catfish				X		X	
Bairdiella chrysura	Silver perch	X						
Centropomus undecimalis	Snook			O	X		X	
Cichlidae spp.	Cichlids	X		O				
Cyprinodontidae sp.	Killifish	X						
Eucinostomus argenteus	Spotfin mojarra				X		X	
Eugerres plumieri	Striped mojarra	X	X					
Gerres cinereus	Yellowfin mojarra		X			X	X	
Gerridae spp.	Mojarras			O				
Lophogobius cyprinoides	Crested goby		X	O	X		X	
Monacanthidae sp.	Filefish	X						
Mugil curema	White mullet						X	
Strongylura marina	Atlantic needlefish				O			
Trinectes maculatus	Hogchoker	X						
Unidentified spp.		X						
INVERTEBRATES								
Callinectes sapidus	Blue crab						X	
Penaeus duorarum	Pink shrimp	X	X					
Rhithropanopeus harrisi	Mud crab	X						

Note: X = collected.
O = observed.

Table 10.5.4-4. Fish and Epibenthic Fauna Collected or Observed at Stations in the Vicinity of FPL's Lauderdale Plant, May 30 through June 1, 1989

Scientific Name	Common Name	Station 1	2	3	4	5	6	7
FISH								
Anchoa spp.	Anchovies	X						
Arius felis	Sea catfish				X		X	
Caranx hippos	Crevalle jack						X	
Centropomus undecimalis	Snook				X		X	
Cichlidae spp.	Cichlids			X				
Clupeidae sp.	Clupeids	X						
Elops saurus	Ladyfish				X			
Eucinostomus argenteus	Spotfin mojarra		X		X		X	
Gerres cinereus	Yellowfin mojarra				X		X	
Gerridae spp.	Mojarras	O					O	
Gobiidae spp.	Gobies						O	
Lagodon rhomboides	Pinfish		X	X				X
Leiostomus xanthurus	Spot				X			
Lophogobius cyprinoides	Crested goby	X	X	X		X		
Mugil cephalus	Striped mullet	X					X	
Sphyraena sp.	Barracuda						O	
Strongylura marina	Atlantic needlefish						O	
Syngnathus sp.	Pipefish	X						
Trinectes maculatus	Hogchoker	X						
INVERTEBRATES								
Callinectes sapidus	Blue crab	X	X		X		X	
Penaeus aztecus	Brown shrimp	X						X
Penaeus setiferus	White shrimp	X						
Rhithropanopeus harrisii	Mud crab	X						

Note: X = collected.
O = observed.

Table 10.5.4-5. Temperature, Conductivity/Salinity, pH, and Dissolved Oxygen Measurements Taken at Stations in the Vicinity of the FPL's Lauderdale Plant, August 24 and 25, 1988 (Page 1 of 4)

PROJECT REPORT

The status of the American crocodile (Crocodylus acutus) at the Lauderdale Power Plant Site.

(Contract # 89023-C)

Submitted to: KBN Engineering and Applied Science
P.O. Box 14288
Gainesville, Florida 32604

Introduction

The American crocodile (Crocodylus acutus) is listed as endangered by the U.S. Fish and Wildlife Service and the International Union for the Conservation of Nature (USFWS, 1979; IUCN, 1986). It occurs throughout the Caribbean, in Central and South Americas, and along the extreme southern tip of Florida. Historically, crocodiles nested as far north as Lake Worth on the east coast (Kushlan and Mazzotti, 1989) and just south of Naples on the west coast (P. Moler, pers. comm.). Currently there are three known crocodile nesting areas in Florida: within Everglades National Park, on North Key Largo, and at Florida Power and Light Company's (FPL) Turkey Point Power site in Homestead.

Crocodiles have been reported to occur in Broward County since 1919 (Barbour, 1923; Mazzotti, 1983), and since the 1960s have been observed continually but infrequently in Broward County (Table 1). These sightings have usually been in the West Lake area or near the FPL Lauderdale power plant, either in the cooling ponds, the South Fork of the New River (SFNR) or at the intersection of SR-84 and 441 (Figure 1). As recently as 1986 a crocodile was reported in the pond apple slough, opposite the cooling ponds, northwest of the SFNR (Browne, 1986).

As FPL seeks to develop land resources (including relicensing the Lauderdale power plant) learning the status of endangered species on the site and in the adjacent area becomes important. The purpose of this study was to determine the status

of the American crocodile on and around the Lauderdale power plant site.

Methods

The main study area consisted of all bodies of water within the area bounded on the east by Ravenswood Road, the north by SR 84, and the west by 441 and the south by Griffin Road (Figure 1). This included the 4 major creeks and numerous smaller creeks in the pond apple slough area (PAS) just south of I-595, the South Fork of the New River Canal (SFNR) and the Dania Cut off Canal (DCOC), (a man-made canal system with steep banks and boat slips), the cooling ponds (CP), a series of ponds on the FPL property bordered by Cocoa Plums (Chrysobalanus icaco), Pond Apple (Annona glabra), and Australian Pine (Casurinia equisetifolia), and a number of ponds outside the FPL property (OSP). Outside of this area we also surveyed West Lake (WL), a mangrove lined lake west of the Intercoastal Waterway and south of the DCOC. The status of crocodiles in these areas was determined by conducting diurnal foot surveys, nocturnal boat surveys, and diurnal helicopter surveys. All three methods have been shown to be effective in determining the presence of crocodilians, as well as for obtaining an index of abundance (Parker and Watson, 1970; Woodward and Marion, 1978; Wood et al, 1985; Bayliss et al 1986; Bayliss, 1987, Brandt 1989).

Foot surveys were conducted mainly in PAS. During these surveys the presence of any crocodilian, crocodilian sign (tail drags or slides) or other wildlife was noted.

One of the most widely used methods for determining the status of crocodilians in an area is through the use of night

time eyeshine counts (Chabreck, 1966; Woodward and Marion, 1978; Taylor and Neal, 1984). The tapetum of crocodilians eyes reflects red to orange/yellow when hit with a light, and for this reason crocodilians can be easily located at night. Eyeshine counts are conducted by shining a strong light along the shoreline and counting the number of eyeshines observed. Nocturnal surveys were conducted in this manor in the CP, SFNR, DCOC (all by canoe with a 5 hp motor) and in the OSP (by vehicle). When an eyeshine was spotted the animal was approached to obtain a size estimate and a positive species identification (American crocodile, Crocodylus acutus, American alligator, Alligator mississippiensis, or spectacled caiman, Caiman crocodylus). An attempt was made to capture all crocodilians sighted in order to weigh, measure (snout-vent length, total length, and skull length), mark and release them (crocodiles and alligators) or to remove them (caimans).

Aerial surveys were conducted of the CP, the PAS, SFNR, DCOC, West Lake, the Seminole Indian reservation between 441 and the Turnpike, and of various ponds outside of the power plant site. Surveys were flow in a Robinson 22 helicopter at an altitude of 30-50 m and an air speed of < 40 knots between 0800 and 1100.

Results

Fourteen surveys were conducted from January 1989 through July 1989 (Table 2). In addition, results from surveys conducted during 1986 and 1987 are presented (Table 3). Of the 14 surveys conducted during this study, 4 were day time surveys, 3 aerial surveys and the remainder night surveys. Pond apple slough was surveyed 8 times, DCOC 4 times, SFNR 6 times, CP 7 times, OSP 6 times, and West Lake 3 times. Twelve sightings of crocodilians were made. Eight of these were positively identified, 4 alligators and 4 caimans. The remainder were unidentified eyeshines, and we can not rule out the possibility that some were American crocodiles. One of the caimans, a 1.83 m male, was captured and removed from the pond apple slough area. No evidence of crocodilian nesting was observed. In addition to crocodilians, numerous other wildlife was observed including manatees (in the cooling ponds), raccoons, foxes, wading birds (including an active roost in the cooling ponds), turtles and a green iguana (Table 2).

Discussion

No crocodiles were sighted in the study area during this study or during 12 surveys conducted during 1986 and 1987. In addition, there was no evidence of crocodilian (alligator, crocodile, or caiman) nesting in the area. That no crocodiles were observed during this study suggests that either crocodiles are not present on the site, are present in only very low numbers, or are transient. However, the techniques used in this study are reliable methods for determining the status of crocodilians in an area (Bayliss, 1987) so it is unlikely that there are resident crocodiles in the area that were missed in the years (1986, 1987, and 1989) of systematic surveys. In addition to the results reported here, M. McMahon reported sighting Alligator mississippiensis and Caiman crocodilus but no Crocodylus acutus in or around the cooling system during surveys conducted in 1985 (McMahon, unpub. data).

The recent reports of crocodiles in the area probably represent the presence of transient individuals and not an established population. Crocodiles are know to move long distances, and, one individual reported in Table 1(c) made several long distance movements (20, 100, and 150 km) between captures in 1978 (Kushlan and Mazzotti, 1989).

In addition, the absence of nesting activity in the study area, even in prime nesting sites (sandy berms) within the cooling ponds indicates that if there are a few crocodiles in the area they are not breeding.

It is interesting to note that during 1986 and 1987 1-11 crocodilians were observed during the night time surveys of the cooling ponds while during this study only one sighting of a crocodilian was made in 5 night time surveys of the same area. There is suitable habitat adjacent to the cooling ponds, and the ponds themselves (particularly in the south western portion) also appear to be suitable. Why there has been a decrease in the number of crocodilians sighted within the cooling ponds is unknown.

APPENDIX 10.5.6

NOISE

10.5.6 Noise

The noise monitoring presented in Section 2.3.8.2 was performed with equipment meeting the specifications in this appendix. Prior to these measurements, preliminary surveys were performed using a Computer Engineering Limited (CEL) impulse sound level meter and analyzer (Model CEL-228) and CEL calibrator. The results of these surveys are presented in Table 10.5.6-1. These survey results were used to locate the monitoring sites presented in Section 2.3.8.2.

Table 10.5.6-2 presents the noise levels used to simulate various construction equipment. The impact analysis is presented in Section 4.6.1.

Table 10.5.6-1 Preliminary Noise Survey

Site Description	Date/Time	Noise Levels (dBA) Maximum	Minimum	Average	Median	Std. Dev.	Comments

EQUIPMENT SPECIFICATIONS

SPECIFICATION FOR BRUEL & KJAER SOUND LEVEL CALIBRATOR

Summarized Specifications Type 4155

The 4155 satisfies the requirements for frequency response given in IEC 651 for Type 1. Nominal specifications are summarized below:

Open Circuit Sensitivity: −26 dB re 1 V/Pa, equivalent to 50 mV/Pa
Frequency Response Characteristic: Frequency ranges for flat 0°-incidence free field response (ref. 250 Hz)
6 Hz – 5 kHz: flat within ±1 dB
4 Hz – 16 kHz: flat within ±2 dB
Lower Limiting Frequency (−3 dB): 1 – 3 Hz (vent exposed to sound field)
Pressure Equalization Time Constant: 0.16 – 0.053 s. The cartridge is back-vented
Diaphragm Resonance Frequency: 14 kHz (90° phase shift)
Cartridge Thermal Noise: 1.2 × 10^{-6} Pa/$\sqrt{\text{Hz}}$, 14.5 dB(A), 15.5 dB(Lin)
Upper Limit of Dynamic Range: 146 dB SPL (dist. < 3% at 100 Hz). Safety limit: 160 dB (peak)
Polarized Cartridge Capacitance: 15 pF at 250 Hz with the external polarization voltage of 0 V applied
Equivalent Air Volume: 40 mm^3 at 250 Hz, 1013 mbar
Ambient Pressure Coefficient: −0.001 dB/mbar at 250 Hz, 1013 mbar
Ambient Temperature Coefficient: −0.006 dB/°C at 250 Hz between −10° and +50°C
Humidity Coefficient: 0.004 dB/%R.H. at 250 Hz, 23°C
Long Term Stability: >400 years/dB at 20°C
Diaphragm Protection: Quartz

Typical Gain with B & K Preamplifiers or input stages of Sound Level Meters

½" Microphones (app. 17 pF)	2230	2231	2614 2615	2619 Serial no. up to 751075	2619 Serial no. from 751077	2639 2645	2660 "0 dB"
G (approx.)	0.0 dB	0.0 dB	−2.2 dB	−0.4 dB	−0.2 dB	−0.05 dB	−0.1 dB

To obtain the overall correction factor, K, subtract G from the open-circuit correction factor, K_0, given on the face side of this chart. The K-factor is used when calibrating B & K Measuring Amplifiers and Analyzers which have an internal reference voltage.

$$K = K_0 - G$$

For example, if K_0 is +0.8 dB and G is −0.2 dB (for a 4155 with a 2619 preamp.), then the correction factor is calculated as follows:

$$K = +0.8 \text{ dB} - (-0.2 \text{ dB}) = +1.0 \text{ dB}$$

Polarization: The two grooves engraved on the microphone cartridge indicate that the microphone is prepolarized. For measurements complying with calibration data on this chart the polarization circuit of the measuring system should be set to "0 V" (or grounded). See relevant B & K literature.

Caution: When mounting a prepolarized microphone on input terminals which are not designed for it, there is a risk that the charge-carrying element of the cartridge could be damaged if static electricity is stored on the person or on the measuring set-up. Prevention is easy – Either the user or the cartridge housing must always touch the preamplifier housing (or sound level meter case) before the centre terminal of the cartridge makes contact.

Dimensions:
Diameter with protecting grid: 13.2 mm (0.52")
Diameter without protecting grid: 12.7 mm (0.50")
Height with protecting grid: 17.3 mm (0.68")
Height without protecting grid: 16.2 mm (0.64")
Thread for coupler/grid mounting: 12.7 – 60 UNS
Thread for Preamp. mounting: 11.7 – 60 UNS

SPECIFICATION FOR BRUEL & KJAER MICROPHONE PREAMPLIFIER AND PREPOLARIZED CONDENSER MICROPHONE

Specifications 4230

Sound Pressure Level:
94 dB re 2 × 10^{-5} Pa (or 1 Pa)

Accuracy of SPL:
At 1013 mbar when loaded with 1,333 cm^3 (corresponding to B & K microphones with protecting grid, and their respective adaptors)
± 0,3 dB at 23°C ± 3°C (68 to 79°F)
± 0,4 dB between 10 and 40°C (50 to 104°F)
± 0,5 dB between 0 and 50°C (32 to 122°F)

Frequency:
1000 Hz ± 1,5%

Equivalent Coupler Volume:
|V| > 140 cm^3 at 23°C (73,4°F)
|V| > 70 cm^3 between 10 and 40°C (50 to 104°F)
|V| > 35 cm^3 between 0 and 50°C (32 to 122°F)

Distortion:
< 1%

Influence of Static Pressure:
± 0,05 dB/100 mbar from 500 mbar to 1100 mbar

Long Term Stability:
Better than ± 0,1 dB/year (expected for normal field use)

Microphone Types:
1" directly
1/2" with supplied adaptor

Power Supply:
Internal supply from 1 × 9 V transistor (IEC 6LF22, NEDA 1604) battery

Operation:
With a new battery the signal will last for up to one minute after contact is released

Battery Check:
As long as the signal continues for a few seconds after the contact is released the change in SPL is less than 0,05 dB

Dimensions:
(Including leather case)
Length: 115 mm (4,5")
Diameter: 44 mm (1,7")

Weight:
(Including leather case)
260 g (0,57 lb)

Accessories Included:
Adaptor for 1/2" microphones DB 0311
Leather case KE 0065
Battery 9 V transistor IEC 6LF22 (B & K order No. QB 0016)

Accessories Available:
1/2" to 1/4" Adaptor DB 0310

SPECIFICATION FOR BRUEL & KJAER OCTAVE BAND FILTER SET

Specifications 1624 and 1625

Filter Set Type	1624 Octave	1625 Third-Octave and Octave
Frequency Range		
Selective	22 Hz to 22 kHz	18 Hz to 22 kHz (1/3 oct.), 14 Hz to 28 kHz (1/1 oct.)
Linear	Typical 5 Hz to 75 kHz (–1 dB)	Typical 3 Hz to 75 kHz (–1 dB)
Band-Pass Filters	10 active 6-pole Butterworth octave filters	31 active 6-pole Butterworth third-octave filters and 31 overlapping 1/1 oct. filters at 1/3 oct. intervals covering 11 octaves
In accordance with standard	IEC R 225–1966, DIN 45 651 and ANSI S 1.11-1966, Class II	IEC R 225–1966, DIN 45 652, DIN 45 651 and ANSI S1.11-1966, Class II & III
Centre Frequencies	31,5 Hz to 16 kHz	20 Hz to 20 kHz
Attenuation at Centre Frequency	0 dB ± 0,5 dB	0 dB ± 0,5 dB
Peak-to-valley Ripple	< 0,5 dB	< 0,5 dB
Attenuation outside Pass Band	See Fig.2 & 3, > 60 dB at 8 f_o and 1/8 f_o	See Fig.6, > 75 dB at 5 f_o and 1/5 f_o (1/3 oct.) > 60 dB at 8 f_o and 1/8 f_o (1/1 oct.)
Filter Shift	Slider switch Green lamp indicates time for filter switching when used with Level Recorder	Manual or Automatic with Level Recorder. 1/3 oct. or 1/1 Oct. steps for 1/1 oct. analysis
Remote Control	Semi automatic of Level Recorders Types 2317 and 2309 via cable AQ 0034	Automatic to/from Level Recorders Types 2317 and 2309 via cable AQ 0034
Input Impedance	10 kΩ in series with 5 μF	10 kΩ in series with 15 μF
Input Terminating Impedance	⩽ 100 Ω	⩽ 100 Ω
Input Voltage	Max. 2 V sinus (2,8 V peak)	Max. 2 V sinus (2,8 V peak)
Output Impedance	< 5 Ω in series with 15 μF	< 5 Ω in series with 2,2 μF
Output Terminating Impedance	⩾ 10 kΩ // 1 nF	⩾ 10 kΩ // 1 nF
Inherent Noise	f_o Hz — max. μV 31,5 Hz — 200 (typ. 140) 63 Hz – 16 kHz — 150 (typ. 70) Lin — 250 (typ. 120)	f_o Hz (oct. or 1/3 oct.) — max. μV 20 Hz–40 kHz — 250 (typ. 170) 50 Hz–10 kHz — 150 (typ. 80) 12,5 kHz–20 kHz — 200 (typ.110) Lin — 250 (typ. 120)
Magnetic Sensitivity (50 Hz)	Approximately 1 mV output for 100 A/m field strength	
Operating Temperature	–10 to + 50°C (+ 14 to +122°F)	
Storage Temperature	–20 to +50°C (–4 to +122°F) Batteries Removed	
Influence of Temperature on Attenuation	< 0,5 dB (–10 to +50°C)	
Influence of Humidity on Attenuation	< 0,5 dB for 0 to 90% relative humidity at ⩽ 40°C without condensation	
Batteries	4 x 1,5 V IEC Type LR6 (QB 0013). Batteries used as extra supply for SLM	
Dimensions	Length 105 mm (4,1 in) – Width 85 mm (3,3 in) – Height 47 mm (1,8 in)	
Weight	450 g (1 lb) including batteries	
Accessories Included	4 Alkaline batteries — QB 0013 1 Plug — JP 0802	
Accessories Available	1,5 m control cable — AQ 0034 Mains Power Supply and Charger — ZG 0254	

T00517GB2

110	50	123	103
120	60	133	113
130[2]	70	143	123
140[2]	80	153	133

[1] FSD on quasi analogue display

[2] Only with attenuator ZF 0020 employed

[3] Values may diverge slightly from nominal value depending on microphone K_0 factor

FREQUENCY RESPONSE:
See Figs.3 and 4

FREQUENCY WEIGHTING:
A, C weighting to IEC 651 Type 1
Linear (20 Hz -20 kHz)
All-pass (10 Hz -50 kHz)

DETECTOR:
Characteristics: RMS, peak
Linearity range: 70 dB
Pulse range: 73 dB
Crest factor capability: 13 dB at FSD

TIME WEIGHTING CHARACTERISTICS:
"I": to IEC 651 Type 1
"F": to IEC 651 Type 1
"S": to IEC 651 Type 1
"Peak": rise time <50 μs
Max. Hold decay rate: 0 dB/s (digital)

L_{eq} RESPONSE TIME FOR CONSTANT INPUT SIGNAL:
1 s after reset

MAXIMUM MEASUREMENT PERIOD:
Only limited by battery life

DISPLAY:
Digital: 4 digits 7 segments, liquid crystal, 8 mm high, resolution 0,1 dB
Quasi-analogue: 60 dB scale with 2 dB resolution for monitoring current SPL

Additional functions:
Overload occurring: †
Overload has occurred: *
Battery near low level: BAT flashing
Battery low level: BAT (flash.) † (non-reset.)
Illegal setting: †

AC OUTPUT:
1 V RMS for full scale, output impedance ≤120 Ω, short circuit protected, mini-jack socket

DC OUTPUT:
3 V for full scale, 0 V bottom scale, 50 mV/dB, output impedance ≤500 Ω, short circuit protected, mini-jack socket

RESET FUNCTION:
Automatic reset all occurs when changing FSD setting.
Reset all: Max./min. detectors, L_{eq}, $L_{EA,T}$ and overload detector are reset
Reset max./min.: Only max./min detectors are reset

MICROPHONE:
Type: ½ inch B & K Prepolarized Condenser Microphone Type 4155
Sensitivity: 50 mV/Pa
Capacitance: 15 pF
Windscreen effect: <0,9 dB up to 10 kHz

CALIBRATION:
Acoustical: With Sound Level Calibrator Type 4230 or Pistonphone Type 4220 by potentiometer adjustment
Electrical: With internal reference source by potentiometer adjustment

REFERENCE CONDITIONS FOR ACOUSTICAL CALIBRATION WITH TYPE 4230:
Type of Sound Field: Free
Reference Incidence Direction: Perpendicular to microphone diaphragm
Reference SPL: 94 dB (re 20 μPa)
Reference Frequency: 1 kHz
Reference Temperature: 20°C
Reference Measuring Range: 110 dB FSD

WARM-UP TIME:
<5 s for 0,5 dB; <10 s for 0,1 dB

EFFECT OF HUMIDITY (AT 40°C AND 1000 Hz):
<0,5 dB for 30%<RH<90%

EFFECT OF TEMPERATURE:
Microphone: −0,006 dB/°C typically
Complete instrument:
<0,5 dB −10 to +50°C
Operating range: -10 to +50°C (+14 to 122°F)
Storage without batteries: -20 to +70°C (-4 to 158°F)

EFFECT OF MAGNETIC FIELD:
60 A/m (1 Ørsted) at 50 Hz gives:
<25 dB (A) or <44 dB (Lin)

VIBRATION SENSITIVITY: 72 dB max. at 40 Hz and 1 ms^{-2}.

BATTERIES:
Type: Four 1,5 V Alkaline cells IEC type LR 6 (B&K order No. QB 0013)
Life: approx. 8 hours

OVERALL DIMENSIONS AND WEIGHT:
370 x 85 x 47 mm (14,7 x 3,3 x 1,8 in)
860 g (1,9 lb) with batteries

ACCESSORIES INCLUDED:

Half-inch Prepolarized Condenser Microphone	Type 4155
2,5 mm mini-jack plug (×2)	JP 0213
Windscreen	UA 0237
Input Adaptor	JJ 2614
Screwdriver	QA 0001
Cells (×4)	QB 0013
20 dB Attenuator	ZF 0020

ACCESSORIES AVAILABLE:

Carrying case	KE 0226
Tripod	UA 0801
Sound Level Calibrator	Type 4230
Level Recorder Cable	AO 0173
3 m Microphone Extension cable	AO 0134
Mains Power Supply and Charger	ZG 0254

APPENDIX 10.6

NEED PETITION

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In Re: Petition of Florida Power & Light Company for Determination of Need for Proposed Electrical Power Plant and Related Facilities -- Lauderdale Repowering Project	)	Docket No. 890973-EI
	)	Filed: July 25, 1989

PETITION TO DETERMINE NEED FOR ELECTRICAL POWER PLANT -- LAUDERDALE REPOWERING PROJECT

Florida Power & Light Company ("FPL"), by and through its undersigned attorneys, hereby petitions the Florida Public Service Commission ("Commission") pursuant to Section 403.519, F.S., and Rule 25-22.081, F.A.C., to determine the need for the proposed electrical power plant and related facilities described herein, and to file its order making that determination with the Department of Environmental Regulation ("DER") pursuant to Section 403.507(1)(b), F.S. In support thereof, FPL states:

1. FPL's full name and business address is:

Florida Power & Light Company
P.O. Box 029100
9250 W. Flagler St.
Miami, Florida 33102-9100

2. The name and address of FPL's representative to receive communications regarding this docket is:

Richard D. Melson
Cheryl G. Stuart
Hopping Boyd Green & Sams
P.O. Box 6526
Tallahassee, Florida 32314

with a copy to:

Roberto R. Denis
Florida Power & Light Company
P.O. Box 029100
9250 W. Flagler St.
Miami, Florida 33102-9100

3. FPL is an investor owned electric utility that serves approximately 3,000,000 customers in thirty-five Florida counties.

4. FPL has determined a need to construct approximately 2,000 MW of new generating capacity on its system between 1993 and 1997. This capacity is needed to maintain adequate system reliability in the face of increasing demand for electrical energy, coupled with declining power purchases from the Southern Companies. This 2,000 MW reflects the need for new generating capacity that remains after implementation of all reasonably available, cost-effective alternatives to new construction. These alternatives, which total over 3,000 MW, include: incremental conservation (139 MW); load management and interruptible load (998 MW); firm purchases from qualifying facilities (1,016 MW, of which 505 MW are currently under contract); and power purchases from the Southern Companies (900 MW).

5. The first step in FPL's plan for meeting this 2,000 MW new capacity need is the repowering of FPL's existing Lauderdale Units No. 4 and No. 5, with the repowered units to be in commercial operation by December 31, 1992. Each of the units to be repowered is a 150 MW

class oil/gas fired steam unit with an existing net summer capacity of 137 MW. The repowering will convert these units to combined cycle operation by the addition of two new advanced combustion turbines (CTs) to each unit. These CTs will be fired primarily on natural gas with distillate oil as an alternate fuel, and the capability of future conversion to burn coal gas as an alternate fuel. The exhaust from the CTs will be captured in new heat recovery steam generators that will be used to drive the existing steam turbines. After repowering, each 400 MW class Lauderdale Unit will have a net summer capacity of 365 MW, or an increase in net capacity of 228 MW per unit (456 MW total).1/ These units and their associated facilities (collectively, the "Lauderdale Repowering Project") are subject to the Florida Electrical Power Plant Siting Act (the "Act"), Sections 403.501 to 403.519, F.S.

6. The Lauderdale Repowering Project is one part of FPL's overall power supply plan for the 1993 to 1997 time frame. FPL additionally proposes to construct four new 400 MW class units -- two 385 MW combined cycle units fired on natural gas (with future capability to use coal gas as an alternate fuel) and an integrated coal gasification combined cycle plant incorporating two 384 MW combined cycle units --

---

1/ This MW estimate is conservative, and actual capacity could increase as much as 10-15% based on final design.

at its Martin site between 1994 and 1996 (the "Martin Expansion Project"). A separate petition to determine the need for the Martin Expansion Project is being filed simultaneously herewith. By separate motion, FPL will be requesting a consolidated hearing on the two need petitions.

7. Concurrently with this filing, FPL has also issued a solicitation that seeks proposals to provide up to 800 MW of non-FPL owned or constructed electric energy and capacity to meet part of FPL's additional capacity need in the 1994 to 1997 time frame. To the extent that the solicitation process produces reliable, cost-effective alternatives, the effect could be to delay completion of some portion of the Martin Expansion Project. Because the Lauderdale Repowering Project offers several unique advantages that make it ideal for FPL's first capacity addition, the solicitation process is not an alternative to that project. These advantages include:

(a) The Lauderdale Repowering site is strategically located close to FPL's major load center, which enhances system reliability.

(b) In addition to providing new capacity, the Lauderdale Repowering Project will convert existing steam units to combined cycle operation, thereby increasing the efficiency of the existing generation.

(c) The project is at a developed site, which minimizes land use and environmental concerns and enables the use of existing cooling facilities.

(d) No additional off-site transmission lines will be required to integrate the repowered plant into the electric grid.

(e) FPL has sufficient natural gas supplies and gas transportation capacity under contract to supply the fuel needs of the repowered units.

(f) The Lauderdale Repowering Project has a relatively short lead time, which enables it to be in-service to meet the 1993 capacity need.

8. Pursuant to the Act, including Section 403.519, F.S., and to Rules 25-22.080 to 25-22.081, F.A.C., the Commission has jurisdiction to determine the need for the Lauderdale Repowering Project, applying the standards set forth in Section 403.519, F.S.

9. As authorized by Rule 25-22.080(1), F.A.C., FPL has elected to commence this proceeding for determination of need prior to the filing with DER of an application for site certification of the Lauderdale Repowering Project. The filing with DER is currently scheduled for early December, 1989.

10. The information supporting this petition is contained in two documents titled "Petition to Determine Need for Electrical Power Plant 1993-1996" and "Petition to Determine Need for Electrical Power Plant 1993-1996 Appendices" (collectively, the "Need Study"), which are attached as Exhibits 1 and 2 to this petition, and

incorporated herein by reference. The Need Study contains FPL's analysis of the need for the Lauderdale Repowering Project and includes the information required by Rule 25-22.081, F.A.C.

11. The accompanying information demonstrates that the Lauderdale Repowering Project is the most cost effective alternative available to meet FPL's 1993 capacity requirements, taking into account the need for electric system reliability and integrity, the need for adequate reasonable cost electricity, and other relevant matters.

12. Because of the overall general public interest and the impact of this proceeding, including the magnitude of the proposed facility and the effect of the proceeding on the economy, public health, and safety of the service area involved, FPL requests that the hearing in this matter be held by the full Commission, as authorized by Section 350.01(6), F.S. and Rule 25-22.0355(4), F.A.C., and that it be conducted as a formal hearing pursuant to Section 120.57(1), F.S.

13. Since this Petition is being filed several months in advance of filing the site certification application with DER, FPL is willing to agree to a waiver of the provisions of Rule 25-22.080(2) which specify that a hearing shall be held within 90 days of receipt of a need determination petition, provided that the hearing is held no later than March 31, 1990.

WHEREFORE, FPL respectfully requests that:

(1) pursuant to Rule 25-22.080(2), F.A.C., the Commission within seven days set a date for a hearing on this petition not later than March 31, 1990;

(2) the hearing in this matter be assigned to the full Commission under Section 350.01(6), F.S., and be held as a formal hearing pursuant to Section 120.57(1), F.A.C.;

(3) the Commission give notice of the commencement of the proceeding as required by Rule 25-22.080(3), F.A.C.;

(4) the Commission submit a preliminary report to DER pursuant to Section 403.507(1)(b), F.S. no later than 60 days after the filing by FPL with DER of a site certification application; and

(5) the Commission determine that there is a need for the Lauderdale Repowering Project described in this petition, and file its order making such determination with the DER pursuant to Section 403.507(1)(b), F.S.

RESPECTFULLY SUBMITTED this 25th day of July, 1989.

PROJECT Lauderdale Repowering

SUBJECT Site Drainage

Divide into contaminated vs Uncontaminated

per "Permit Information Manual, SFWMD Basis of Review ..." see p 3.8-3 of SCA (BOR)

"contaminated" per section 3.2.2.2 (3)(b) refers to "hazardous materials". Since SFWMD does not define hazardous materials, we assume they use state/federal definition

Note: all potentially oily wastewaters are collected and sent to a central wastewater treatment facility - see section 3.6 of SCA. This calculation deals with non-contaminated, non-oily runoff.

Reference Drawings - Figures 3.8-1, -2 & -3 from SCA (attached)

Note: This calculation proceeds in same order as sub-section 3.8.2 of the SCA

Based Figure C-I-5 (see Calc 27, p. 2) of BOR

design storm:

24 hour 10 year precip = 11 in.

thus 72 hour 10 year = 1.359 * 11

= 15 inches (1.359 from Table C-I-2 of BOR)

EBASCO SERVICES INCORPORATED

SUBJECT Site Drainage

to look at entire site

pre-existing runoff

Divide site into two land areas (see Att 1, Figure 2.1-3 from SCA) - Area 1 bounded by South New River Canal (w), stub Canal/Discharge Canal (N), Dania Cut-Off Canal (s) and unnamed dead-end canal (e)

Area 2 - North of Discharge Canal

Area 1 ≈ 2880' * 816' = 2,350,080 ft²

2,350,080 / 43560 = 54 acres

surface imperviousness of this area varies from pavement to grass, overall estimate it as follows:

50% grass @ 0.10 } average = 0.50
50% paved @ 0.90 }

per rational method

$$Q = c\,i\,a$$
$$= 0.50 * i * a$$

a = 54 acres
c = 0.50

per SFWMD BOR design storm, peak hourly intensity (see Figure C-I-7) = 0.42 * 24 hr value
= 0.42 * 11 = 4.62 inches/hour

max flow Q = c i a = 0.5 * 4.62 in/hr * 54 ac

EBASCO SERVICES INCORPORATED

CHKD. BY KM DATE 11/6/89 OFS NO. 7918.017 DEPT. NO. 941
CLIENT FPL
PROJECT Lauderdale Repowering
SUBJECT Site Drainage

Q = .5 * 4.62 * 54 = 124.74 in-acres/hour

Only a portion of this drains to Davie Cut-Off Canal - see Att 1, shaded area

shaded area $\cong \frac{1200 * 500 + 400 * 180}{43560}$

= 15.4 acres

Q = C i a = .5 * 4.62 * 15.4 = 35.6

35.6 in-acres/hour * $\frac{43560}{12 * 3600}$ = 35.9 cfs

say 36 cfs

Note: Area 2 will not be affected by the Project - drains to cooling pond/canal system anyway

After Repowering

West portion of site: Att 3

per p. 3.8-9 of SCA

West Construction Area and Water Treatment Area - these drain to Stub Canal

Total drainage to Stub Canal

$\frac{720 * 630}{43560} \cong$ 10.4 acres

Attachment 1
Calc. No. 47

$$t_c = \frac{41bL_o^{1/3}}{(ki)^{2/3}} \tag{7.11}$$

where t_c = time of concentration, min
b = coefficient
L_o = overland flow length, ft
k = rational runoff coefficient (see Table 7.6)
i = rainfall intensity, in./hr, during time t_c

The equation is valid only for laminar flow conditions where the product iL_o is less than 500. The coefficient b is found using

$$b = \frac{0.0007i + C_r}{S_o^{1/3}} \tag{7.12}$$

where S_o = surface slope
C_r = coefficient of retardance

Values of C_r are given in Table 7.5. Note that reliability of this equation is also strongly influenced by the selection of parameters.

The runoff coefficient c is the component of the rational formula that requires the greatest exercise of judgment by the engineer. It is not amenable to exact determination, since it includes the influence of a number of variables, such as infiltration capacity, interception by vegetation, depression storage, and antecedent conditions. As used in the rational equation, the coefficient c represents a fixed ratio of runoff to rainfall, while in actuality it is not fixed and may vary for a specific drainage basin with time during a particular storm, from storm to storm, and with change in season. Fortunately, the closer the area comes to being impervious, the more reasonable the selection of c becomes. This is true since for highly impervious areas c approaches unity, and for these areas the nature of the surface is much less variable for changing seasonal, meteorological, or antecedent conditions. The rational method therefore is best suited for use on urban areas, where a high percentage of imperviousness is common.

At present there is no precise method for evaluating the runoff coefficient c, although some research has been directed toward that end [12]. Common engineering practice is to make use of average values of the coefficient for various surface types normally found in urban regions. Table 7.6 lists some values of the runoff coefficient as reported in the American

TABLE 7.5 IZZARD'S RETARDANCE COEFFICIENT C_r

Surface	C_r

Lawns, heavy soil	
Flat, 2%	0.13–0.17
Average, 2%–7%	0.18–0.22
Steep, 7%	0.25–0.35

[a] See Ref. 10.

Society of Civil Engineers' *Manual on the Design and Construction of Sa and Storm Sewers* [10].

Figure 7.10 relates the rational C to imperviousness, soil type, and slope. This graph is used in designing storm drains in Baltimore Co Maryland. Most engineering designers make use of information report similar tabular or graphical form, inserting local conditions following experience and practice.

In applying the rational method, a rainfall intensity i must be that represents the average intensity of a storm of given frequency fo time of concentration. The frequency chosen is largely a matter of econo Factors related to the choice of a design frequency have already discussed. Frequencies of 1–10 yr are commonly used where residential are to be protected. For higher-value districts, 10–20-yr or higher r periods often are selected. Local conditions and practice normally dictat selection of these design criteria.

After t_c and the rainfall frequency have been ascertained, the ra intensity i is usually obtained by making use of a set of rainfall inter duration–frequency curves such as those shown in Fig. 7.11. Enterin curves on the abscissa with the appropriate value of t_c and then proje upward to an intersection with the desired frequency curve allows i found by projecting this intersection point horizontally to an intersection the ordinate. If an adequate number of years of local rainfall reco available, curves similar to Fig. 7.11 may be developed. Otherwise, compiled by the Weather Bureau, the Department of Commerce, Department of Agriculture, and other government agencies, data tha available for numerous localities and regions, can be used.

Generally, the rational method should be used only on areas tha smaller than about 2 mi² (approximately 1280 acres) in size. For areas l than 100 acres due caution should be exercised. Most urban drainage
