RE: Initial Notification – Plywood and Composite Wood Products MACT Applicability

In reviewing applicability to the PCWP NESHAP for the Whitehouse Lumber Mill, we are writing to reconcile the facility's status as a major source of HAP. International Paper's Wood Products Division has adopted an NCASI emission factor for methanol from direct fired lumber kilns of 0.16 lb per MBF. With a maximum permitted kiln production of 126,861,000 BF, Whitehouse is a major of HAP source based on the threshold of 10 tons for a single HAP.

Noting the facility's Title V permit expiration date of July 31, 2006, we plan to incorporate the HAP emission factor in the respective renewal application.

Sincerely,

Hardy Maloen
Plant Manager
