Mr. William Thomas
Florida Department of Environmental Regulation
Twin Towers Office Building
2600 Blair Stone Road
Tallahassee, Florida 32301

Dear Mr. Thomas:

Specific Condition No. 9 of Construction Permit AC 17-113551 specifies a maximum production throughput of 800 TPD for the A line system, and 600 TPD for the B line system. While the systems were designed for this throughput, actual production capacity is greater than anticipated capacity. In fact, compliance test was performed at a rate of 888 tons/day on A line and 792 tons/day on B line. These rates have defined the maximum daily capacity.

Champion requests that construction permit AC 17-113551 be modified to allow a total of 1400 tons per day annual average air dried bleached production rather than individual limits on each line. This modification will not affect emissions or the basis of the original permit issuance. It will provide Champion flexibility in terms of operating the mill. It will have no effect on other processes in the mill, or on emissions from other permitted sources. It does not affect total facility production capacity or individual process production capacity.

If there are questions concerning this request, please call.

Sincerely,

David T. Arceneaux
Supervisor Environmental Control
