RE: Title V Permit Application for Ogden Martin Systems of Lake, Inc.

Dear Sirs:

Ogden Martin Systems of Lake, Inc. (OMSL) is submitting herewith the Title V Permit Application for its resource recovery facility in Okahumpka, Florida. As required by the FDEP, we have included four sets of computer diskettes with the completed ELSA Version 1.3 electronic permit application files, four original copies of the signed compliance certification forms, and four copies of all attachments to the permit application. For your reference, we have also included one complete hard copy of the ELSA permit application forms.

OMSL believes that the information provided in this document is complete and accurate and that because this permit application has been submitted prior to the call date of June 15, 1996, the application represents a timely submission.

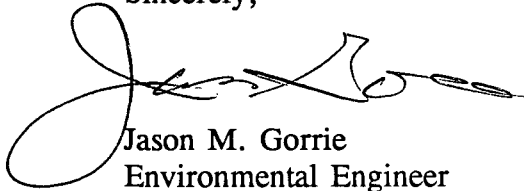

The majority of the applicable requirements and conditions cited in this permit application are identical to those specified in the existing permits issued for the facility by the FDEP. OMSL, however, requests clarifications to certain permit conditions. In order to facilitate your review of this permit application, we have summarized these proposed clarifications as follows:

- ◆ In the facility's existing permit, the maximum individual municipal waste combustor (MWC) throughput for the combustors is defined as a combination of maximum solid waste and biohazardous waste throughput, heat input, and steam rates. OMSL requests that compliance with the maximum individual MWC throughput limit be demonstrated through measurement and recording of the steam rate only (See Section 1).
- ◆ It is OMSL's understanding that the current facility permit allows for the processing of biohazardous waste in either MWC Unit #1 or #2, at a rate not to exceed 2.15 tons per hour per unit and 51.6 tons per day for both units combined (See Section 1).

OMSL reserves the right to modify or amend this permit application in accordance with any future rules, guidance, or policy developed by EPA or FDEP concerning Part 70 permit applications. Specifically, OMSL intends to submit significant amendments once the FDEP's development of rule 62-296.416, F.A.C. becomes final.

If you have any questions or need additional information, please call me at (352) 365-1611.

Sincerely,

A handwritten signature in black ink, appearing to read "Jason M. Gorrie". The signature is fluid and cursive, with a large initial "J" and "G".

Jason M. Gorrie
