Subject: Minor Source Construction Permit Request (Amendment to Previously Issued Permit)
Importance: High

David and Al

On behalf of U.S. EcoGen Polk, LLC attached is a request to amend a previously issued minor source construction air permit for the U.S. EcoGen Polk Generating Facility, to be located in Polk County, Florida. As discussed in the attached document, U.S. EcoGen Polk, LLC has recently secured contracts with the EPC contractor and boiler manufacturer. The boiler manufacturer had minor changes to the initial minor source construction air permit, which are reflected in the attached document.

Please review this request and let us know if you have any questions or comments related to this request. The changes being proposed to the minor source construction air permit should not affect applicability or compliance with state and federal air regulations, and will not cause an impact to human health and welfare. The boiler manufacturer will be providing a written guarantee that will state the boiler to be installed will meet the emission limits /rates as established by the FDEP in the minor source construction permit.

Best Regards

Steve
