Hi Tom,

A column was added in the attachment to address location during the outage. All of the equipment is portable in that it has handles, hooks etc so that it can be moved. All of the cranes will be moved as needed for work in different locations around the site. They will be bolted down securely during work mode for stability & safety.

Please let me know if you need additional information.

Thanks, Mary

Hi Mary – a few questions have come up as we are reviewing the Turkey Point project – will any of the equipment (cranes, etc.) be fixed permanently in place at the site over 12 months? Will all be moved around as needed as the construction progresses? This information is important to determine possible exemption status.

Hi Tom,

The uprate project was approved through the site certification process on October 29, 2008. The section that covers Air Emissions and Combustion equipment is attached.

This would be addressing the equipment on the list sent to you earlier today.

Talk to you later.

Thanks, Mary
