Subject: RE: Mosaic Riverview BART Response

Here are my questions:

1. Comment and Response 16 in the letter from Golder and Associates dated July 9, 2007 states that permitted emission limits rather than available CEMS data was used for the BART sulfur dioxide analysis. According to the modeling protocol, if CEMS data is available, that is what should be used. Please use available CEMS data for your sulfur dioxide analysis.
2. Referring to the Responses for 17 and 18 in the letter from Golder and Associates dated July 9, 2007, no electronic spreadsheets have been submitted. Please submit all electronic spreadsheets and any additional modeling files to the Department.
