Subject: Minor Air Construction Permit #1210471-001-AC

Hello,

Due to car trouble, I was not able to make it to Tallahassee as planned today.

Please submit the following and attached information to the file for Minor Air Construction Permit #1210471-001-AC.

I'm not allowed on the Catalyst Site in Suwannee County to do my own research. I would be trespassing. The area proposed for the above captioned permit may be one of the worst places in Florida to build anything that stores fly ash, bottom ash and unburned, raw medical waste. There are giant, flowing, water-filled cave conduits directly beneath the site that are currently costing Suwannee County over a half a million dollars to "fix." The following story covers a "special meeting" the county commission held on Wednesday to order emergency repairs to the Catalyst Site.

<http://suwanneedemocrat.com/suwannee/x865766401/-956K-approved-for-catalyst-project>

Since I have no direct data on the site, I can only request public information from the Suwannee County Commission which will take several days to a week to obtain regarding the subsurface mapping of the Catalyst Site where the IWMS Incinerator is planned. Since Suwannee County has hired someone to fix the sinkholes, I am assuming that there is data in their records.

I strongly object to the plans as they are now for Air Construction Permit #1210471-001-AC. Any emission source this close to open water will only make our toxic levels of mercury in the Suwannee River and Gulf of Mexico more dangerous to the public.

I also object to the air emissions that will effect me as a local landowner. I have attached a map to this e-mail showing the relative distances to these Outstanding Florida Waters as well as to my own property.

I have also attached a report from the EPA indicating that the Suwannee River has already been severely impacted by mercury deposition from sources north of the Catalyst Site.

The site chosen for the Integrated Waste Management System is unstable. This instability causes a direct hydrological conduit to the local groundwater, springs and to the Suwannee River. This project should not be allowed to be built at this site, it will cause a serious threat to public health.

Thank you for your time.
