COMMENTS: According to John Rosenfelt, baghouses are cleaned out weekly...sometimes daily. Bags are checked every three months, and the shaker is on a 2 minute timer. The facility did conduct their 2007 VE testing, but the testing was not submitted to the Department as required. The aggregate piles are continuously wet with a sprinkler system and the facility provided fuel records upon request. The facility also provided production records to me while I was at the facility. During my visit, the facility was not operating. I did issue a field warning notice for the late submittal of the 2007 VE testing. I also spoke with Mr. Kelly Folsom during my visit at the facility and he agreed to e-mail the VE testing to me for our files. 2007 testing e-mail was in my Inbox before I returned from the field. After reviewing facility files it was noted that the Department informed the facility in 2004 they could test only flyash sil0 for annual testing since both silos cannot be filled simultaneously. There was an additional baghouse on site that the facility contact (Mr. John Rosenfelt) stated would be installed soon. I informed Mr. Rosenfelt that Tarmac should notify DEP prior to installation of the additional baghouse. Enforcement referral should be created for late submittal of 2007 VE testing. Will mark 2007 testing MNC and this inspection report IN compliance in ARMS.
