COMMENTS:

Electricity is used to operate the plant; thus, a logbook for fuel consumption is not required. Additionally, Rule 62-210.310 was revised and is effective as of January 10, 2007. Currently, Paragraph (5)(b), does not require maintaining records for sulfur content of the fuel being burned (Fuel supplier certifications). Additionally, records of fuel consumption on a monthly basis are not required; however, if the facility is collocated with other facilities, total fuel consumption usage, per year, will need to be demonstrated.

A computer program tracks materials processed on a monthly basis.

Fugitive dust was noted at the entrance to the site and in the public roadway.

The site manager explained that the sweeper truck must have broken down because it has not been there since February.

I explained that the dust at the entrance of the site and on the road in front of the site needed to be removed on a regular basis, and suggested the use of a vacuum truck.

The last required testing for visible emissions/particulate matter was performed on June 15, 2007.

The next testing should be performed on or before August 11, 2008. A 15-day prior notification of emissions testing is required.
