4. Are emissions from the weigh hopper (batcher) operation controlled by the silo dust collector? (If answer to this question is “Yes”, then continue on to questions 4.a) and 4.b) below. If answer is “No” then skip 4.a) and 4.b) and continue on to question 5.)----- Yes No
 - a) Was the batching operation in operation during the visible emissions test?----- Yes No
 - b) During the visible emissions test, was the batching rate representative of the normal batching rate and duration?----- Yes No
5. If emissions from the weigh hopper (batcher) operation are controlled by a dust collector, which is separate from the silo dust collector, are the visible emissions tests of the weigh hopper (batcher) dust collector conducted while batching at a rate that is representative of the normal batching rate and duration?----- Yes No

2. If this is a stationary concrete batching plant, is there one or more relocatable nonmetallic mineral processing plants using individual air general permits at the same location? (*If your answer to this question is YES, then proceed to questions 2.a), thru 2.d), below.*)----- Yes No
- a) Are there any additional nonexempt units located at this facility?----- Yes No

COMMENTS:

The inspector arrived at the site and met with Dennis Smith, Site Operator.

The concrete batch machine was not being used and no trucks were present. The baghouse and curtain for the drop point were in place. All the duct work appeared to be free of holes.

The silos did not appear to have separate filter units, and all emission control equipment was ducted into the main baghouse.

A sprinkler system was installed in the yard area for yard emissions.

The DEP computer database shows a VE compliance test review on July 30, 2006. The test appeared to be in compliance.

RECOMMENDATIONS:
