COMMENTS: Previous VE Test was done on 3/23/07 counts for the 06 VE compliance test. The test done today will count for 2007 VE.

Annual VE Test.-

Emissions test was on ground mounted central baghouse for both flyash and cement.

Test was performed on cement/slag uploading.

VE test was 30 minutes.

Rate of truck uploading was 26.29 Tons./60 min. @ 10-12 PSI

Normal batching occurred during the test.

Fugitive Emissions:

Stock piles of sand and rock were being watered by sprinklers.

Part of the site is paved and part is dirt. On the back and right side from the silos, the dirt roads were very dry. During VE test a garbage truck drove on the back and lift a cloud of dust, which had the potential of leaving the property. No PM leaving the property at the time of inspection.

I was told by the Plant Manager, that they have a street sweeper coming once a week, and a water truck comes 2 to 3 times a week to water the roads. I mentioned to the Plant Manager that it looks that is not enough to keep the dust down, and that they need to water more often.

Roger Caldwell, environmental consultant conducted the VE test on site.

No odors were noticed during the test. Observed opacity = 0%
