COMMENTS:

- During the inspection of the facility, I met with the responsible official Mr. Abdallah Kleih.
- I observed the calendar record logs for 2006 and 2007, and the dryer temperatures ranged of 26 – 29°F. Mr. Kleih stated he checks the rear thermometer on the dryer. The highest 12 month consecutive total was 55 gallons in June for calendar year 2007.
- The records were up to date as of 6/8/2007. Mr. Kleih was maintaining the purchase receipts for the perchloroethylene and Hazardous waste manifest copies with the calendar records. His purchases are typically 15 gallons of perchloroethylene; the most recent purchase was 30 gallons in 4/2007. The most previous waste disposal was on 9/26/2006.
- I observed the Suprema 850-53 Eco Super dryer machine; it was in operation at this time, drying cycle.
- There was no Perchloroethylene odor detected in areas adjacent to dryer.
- I inspected the dryer and equipment, the separator containers were in secondary containment, and closed. (See Photos).
- The black waste drums used for hazardous material were located in the secondary containment to prevent perchloroethylene leakage onto the floor. The water is not separated; it is disposed of as Hazardous waste. (See Photos).
- The electric boiler is located inside the building in a separate room.
- I informed Mr. Kleih of the requirement for purchase of the halogen leak detector by July 2008, and gave copy of the rule. He stated he had seen them in the Cleaner Supply for ~ $120.00 now. I also informed him of the water separator FDEP memo and gave him a copy.
- This facility was operating in compliance at the time of inspection.
